About the Authors

Kevin E. Voges is a senior lecturer in marketing at the University of Canterbury, New Zealand. Dr. Voges has taught research methods courses in psychology, education, and business. He has consulting experience in education, organizational development, business planning, and market research. His research interests include the application of concepts and techniques from computational intelligence to marketing theory and practice. He has developed a new cluster analysis technique, rough clustering, based on rough sets theory.

Nigel K. Ll. Pope is an associate professor of marketing at Griffith Business School, Australia. His work has appeared in the *Journal of Advertising* and *European Journal of Marketing*. In addition, he is a winner of the Literati Award and the Australian Award for Excellence in Academic Publishing. His research interests include the application of analysis to marketing strategy and planning.

* * *

Faezeh Afshar is a lecturer in the School of Information Technology and Mathematical Sciences, University of Ballarat, Australia. Her research interests are in the fields of knowledge acquisition and representation, argumentation and group decision-making.

Damminda Alahakoon received a BSc (Hons.) in computer science from the University of Colombo, Sri Lanka and a PhD in computer science from Monash University, Australia. He has more than eight years experience in IT and finance industries and is currently a lecturer in the School of Business Systems, Monash University. Before joining Monash,
he held positions as accountant, credit officer and data mining specialist in IT and financial organizations in Sri Lanka, Australia, and The Netherlands. His current research interest includes data mining and analysis, artificial neural networks, fuzzy systems, and adaptive intelligent systems.

Anthony Brabazon lectures at University College Dublin, Ireland. Dr. Brabazon’s research interests include mathematical decision models, evolutionary computation, and the application of computational intelligence to the domain of finance. He has in excess of 100 journal, conference, and professional publications, and has been a member of the program committee at multiple conferences on evolutionary computation, as well as acting as reviewer for several journals. He has also acted as consultant to a wide range of public and private companies in several countries.

David Cairns has worked as a researcher and application developer within the field of computational intelligence for more than 15 years. Dr. Cairns has developed and sold neural network based CI systems and has run a consultancy company specializing in CI-based solutions for marketing, financial services, and insurance. Dr. Cairns is a lecturer in the Department of Computing Science at the University of Stirling, Scotland.

David Camacho is an associate professor in the Computer Science Department at the Autonomous University of Madrid, Spain. He received a PhD in computer science (2001) from the Universidad Carlos III de Madrid for his work on coordination of planning heterogeneous agents to solve problems with information gathered from the Web. He received a BS in physics (1994) from the Universidad Complutense de Madrid. His research interests include multi-agent systems, distributed artificial intelligence, Web service technologies, knowledge representation, automated planning and machine learning. He has also participated in several projects about automatic machine translation, optimizing industry processes, multi-agent technologies, and intelligent systems. He is the managing editor of the *International Journal of Computer Science & Applications (IJCSA)*, and has been selected as a chairman and member of the organizing committee for several international conferences.

Pramesh Chand received a Bachelor of Computing (computer science) from Monash University, Australia (1995) and is currently a PhD research scholar at the Faculty of
Information Technology. His areas of interests are energy market and operations research. His current research involves investigation of a nonlinear constraint model of the Australian wholesale energy and ancillary services markets. He has published a number of technical papers on optimizing the Australia market.

**Amitava Datta** received his MTech (1988) and PhD (1992) degrees in computer science from the Indian Institute of Technology, Madras. He did his postdoctoral research at the Max Planck Institute for Computer Science, University of Freiburg and the University of Hagen. He joined the University of New England, Australia, in 1995 and subsequently the School of Computer Science and Software Engineering at University of Western Australia in 1998, where he is currently an associate professor. He was a visiting professor at the Computer Science Institute, University of Freiburg, Germany in 2001, 2003, and 2005. His research interests are in parallel processing, optical computing, computer graphics, information visualization, bioinformatics and mobile and wireless computing. He has served as a program committee member for several international conferences in these areas including the International Parallel and Distributed Processing Symposium in 2001 and 2005. He is on the editorial board of the *Journal of Universal Computer Science* (Springer) and the *Journal of Pervasive Computing and Communications* (Troubador). He is a member of the IEEE, IEEE Computer Society and the ACM.

**Zhao Yang Dong** received a PhD in electrical and information engineering from The University of Sydney, Australia (1999). He is now a senior lecturer at the School of Information Technology and Electrical Engineering, The University of Queensland, Australia. His research interest includes power system security assessment and enhancement, electricity market, artificial intelligence and its application in electric power engineering, power system planning and management, and power system stability and control.

**Alice Delahunty** is a post-graduate student in the Department of Management Information Systems at University College Dublin, Ireland.

**Tom Downs** earned a bachelor’s degree and PhD both in electrical engineering and both from the University of Bradford, UK. His PhD was awarded for work carried out in the Theoretical Sciences Laboratory of the Marconi Company at Baddow, Essex. He joined the Department of Electrical Engineering at The University of Queensland, Australia, as a lecturer in 1973. He was appointed a professor of electrical engineering in 1987 and was head of the department for five years from 1990. He is now located in the recently merged School of Information Technology and Electrical Engineering. His research interests include neural networks, machine learning, and applied probability.

**Ranadhir Ghosh** completed his BSc in computer science and engineering from Bangalore University, India, then obtained his MSc in IT from Bond University, and later obtained a PhD from Griffith University (2003) with an academic excellence award. He is currently
a lecturer in the School of ITMS at the University of Ballarat, Australia. His expertise is in evolutionary neural learning and its applications. He has many publications in various international journals, conferences, and book chapters.

**Martin G. Helander** is a professor at the School of Mechanical and Aerospace Engineering at Nanyang Technological University, Singapore. He received a PhD from Chalmers University of Technology in Göteborg, Sweden. He has held faculty positions at Luleå University, State University of New York at Buffalo and Linköping University, and visiting appointments at Virginia Tech, MIT and Hong Kong University of Science and Technology. His primary research interests are in human factors engineering and ergonomics. He is the past president of the International Ergonomics Association.

**Andrei Hryshko** received his 1st Class Honors degree in applied mathematics and computer science from the Belarus State University (2001). He is currently reading for his PhD in the School of Information Technology and Electrical Engineering, University of Queensland, Australia. His research interests include machine learning, evolutionary computation, optimization and finance.

**Sasha Ivkovic** is currently a lecturer in the school of ITMS at University of Ballarat, Australia. His interests include open source, Linux, and knowledge discovery from databases (data mining — association rules). Mr. Ivkovic completed his BComp (Hons.) and Master of IT (research) from the University of Ballarat. His current research includes the organization of generated association rules and discovery visualization.

**Kristina Risom Jespersen** received a PhD from Aarhus School of Business, Denmark, on the topic “information and new product development decision-making” and is currently working as an assistant professor at the Department of Marketing, Informatics and Statistics where she is responsible for courses in general statistics and data collection methodologies.

**Jianxin (Roger) Jiao** is an assistant professor of systems and engineering management with the School of Mechanical and Aerospace Engineering, Nanyang Technological University, Singapore. He received a PhD in industrial engineering from Hong Kong University of Science and Technology. He holds a bachelor’s degree in mechanical engineering from Tianjin University of Science and Technology, China, and a master’s degree in mechanical engineering from Tianjin University, China. His research interests include mass customization, design theory and methodology, reconfigurable manufacturing systems, engineering logistics, and intelligent systems.

**Peter Keenan** lectures at University College Dublin, Ireland. Dr. Keenan’s research interests include decision support systems, the application of computational intelligence to decision support, geographic information systems in business and their
application to decision support, especially in the context of transportation problems. He
has published extensively in these areas, as well as acting as a member of the program
committee at numerous conferences and has reviewed for a variety of publishers,
conferences and scholarly journals.

**Martin Kitchener**, PhD, MBA, is an associate professor at the University of California,
San Francisco (UCSF), USA. His research and teaching concentrate on the organizational
analysis of health and social care. He was previously economic and social research
council (ESRC) fellow at Cardiff University, UK, and Harkness research fellow at the
University of California, Berkeley. Kitchener currently directs a federal government
research program on the development of health programs for the disabled. Recent papers
appear in edited volumes and journals including: *Organization Studies, Organization,
Health Affairs, Healthcare Management Science, Inquiry, Social Science & Medicine,
and Journal of Health and Social Behavior*. He is also the co-author of the book,

**Tatsiana Levina** is an assistant professor of management science at Queen’s School of
Business, Canada. She holds an MBA and PhD in management (Rutgers University,
2004). Her current research focuses on the development of new online learning strategies
and their applications to portfolio analysis, optimization, and revenue management
problems.

**Prasanna Lokuge** has more than 14 years experience in information systems in both
public and private sectors. Since 2003, Lokuge has been an assistant lecturer/lecturer at
the School of Business Systems, Monash University, Australia. He obtained his first
degree in BSc in 1990. He then completed his post graduate diploma in information
technology from the University of Colombo, Sri Lanka (1993) and completed the master’s
degree in computer science at the University of Colombo, Sri Lanka (1999). He currently
is reading for his doctorate at Monash University, Australia, in intelligent agents for the
shipping industry. He is a full member of the Australian Computer Society, Computer
Society of Sri Lanka and a chartered member of the British Computer Society.

**Brian C. Lovell** received a BE in electrical engineering (Honors I) in 1982, a BSc in
computer science in 1983, and a PhD in signal processing in 1991, all from the University
of Queensland (UQ), Australia. Lovell is program director of engineering and research
director of the Intelligent Real-Time Imaging and Sensing Research Group in the School
of ITEE, UQ. He is president of the Australian Pattern Recognition Society, senior
member of the IEEE, fellow of the Institute of Engineers, Australia, and voting member
for Australia on the governing board of the International Association for Pattern
Recognition.

**Dennis O’Callaghan** is a post-graduate student in the Department of Management
Information Systems at University College Dublin, Ireland.
**Michael O’Neill** is a lecturer in the Department of Computer Science and Information Systems at the University of Limerick, Ireland. Dr. O’Neill has more than 70 peer-reviewed publications on biologically inspired algorithms including the seminal book on grammatical evolution. Dr. O’Neill is a regular reviewer for the leading evolutionary computation journals and conferences.

**Rob Potharst** studied applied mathematics at the University of Amsterdam where he received his MSc in 1971. He taught mathematics, statistics and economics at several high schools and colleges until he joined the Computer Science Department, Erasmus University Rotterdam (1987), The Netherlands. Since 1995 he has been involved in research at the cutting edge of applied statistics and artificial intelligence, culminating in a PhD from Erasmus University Rotterdam in 1999. Currently, as an assistant professor at the Econometric Institute of this university, his main interest is in applying methods from the field of computational learning to marketing problems. Potharst has published several articles in international books and journals.

**Michiel van Rijthoven** obtained his MSc in economics and computer science at the Erasmus University Rotterdam. He is currently an employee of Oracle Netherlands, where he creates J2EE systems with Oracle products.

**Thomas L. Saaty** is a professor of the Katz Graduate School of Business, University of Pittsburgh, USA, and earned his PhD in mathematics from Yale. He is a member of the National Academy of Engineering. Previously, he was a professor with the Wharton School, University of Pennsylvania, before which he worked at the Arms Control and Disarmament Agency, State Department, Washington, DC, on nuclear arms reduction negotiations with the Soviets in Geneva. He has published 33 books and 250 papers. His latest books include *The Brain: Unraveling the Mystery of How It Works* and *Creative Thinking, Problem Solving & Decision Making*. He developed the analytic hierarchy process (AHP) for decision-making and its generalization to feedback, the analytic network process (ANP).

**Tapan Kumar Saha** was born in Bangladesh and immigrated to Australia in 1989. He is currently a professor in the School of Information Technology and Electrical Engineering, University of Queensland, Australia. Before joining the University of Queensland, he taught at the Bangladesh University of Engineering and Technology, Dhaka for three and a half years; and then at James Cook University, Australia for two and a half years. His research interests include power systems, power quality, and condition monitoring of electrical plants. Dr. Saha is a fellow of the Institute of Engineers Australia.

**Andrew Stranieri** is a senior lecturer in the School of Information Technology and Mathematical Sciences, University of Ballarat, Australia, and managing director of a decision support system company, JustSys Pty Ltd. Dr. Stranieri has published more than 30 journal and conference articles on the application of artificial intelligence to law and
a text on data mining in law. His current research interests are in the field of narrative for conveying information, knowledge based systems, online dispute resolution and data mining.

**Ly Fie Sugianto** is currently a senior lecturer at the Faculty of Information Technology, Monash University, Australia. She holds a Bachelor of Computer Systems Engineering (Honors 1) from Curtin University and Doctor of Philosophy in electrical engineering from Monash University. Dr. Sugianto has published more than 50 research papers in optimization technique, fuzzy mathematics, decision support systems and e-commerce. She has also received several grants to conduct research in electricity markets and information systems. Her areas of interest include spot price forecasting, strategic bidding and dispatch optimization.

**Kevin Swingler** has dedicated his 15-year career to the commercial application of intelligent computing techniques. He started off on research projects for British Telecom and The Ford Motor Company before forming his own company (in partnership with the other author of this chapter) to develop and sell neural network based software. The business served clients in insurance, banking, marketing, publishing and lending. His book, *Applying Neural Networks* (Academic Press) was the first practical guide to applying those techniques in a commercial environment. He now runs a consultancy company that helps universities to find commercial applications for computational intelligence techniques.

**Tadao Takaoka** is professor of computer science at the University of Canterbury, New Zealand. He obtained his bachelor’s, master’s, and PhD degrees in applied mathematics and physics at the School of Engineering, Kyoto University, Japan. After working at the NTT Laboratory as a researcher and at Ibaraki University as a professor, he started at Canterbury in 1997. Takaoka’s research areas are in theoretical computer science in general and algorithms in particular. He specializes in algorithms for pattern matching, combinatorial generation, shortest paths, data mining, cryptology, and so forth. He co-authored the book, *Fundamental Algorithms* (Iwanami Shoten Pub. Co.), organized the 12th International Symposium on Algorithms and Computation (ISAAC 2001), edited a special issue of *Algorithmica* for ISAAC 2001, and has published more than 70 papers in journals and proceedings of international conferences.

**Kesaraporn Techapichetvanich** received her Bachelor of Engineering in electronics engineering from King Mongkut Institute of Technology, Ladkrabang, Thailand. She worked as a system engineer in a telecommunication company. She completed a Master of Science in computer science at The University of New South Wales in July 2001. She is currently doing a PhD in computer science and software engineering at the University of Western Australia, Australia. Her research interests include information visualization, data mining, and computer graphics. Her current research projects involve in visual exploration and analysis.
Christian J. Walder received a BE in electrical engineering (Honors I) in 2000 from the University of Queensland. After completing the degree, Walder worked as a research scientist in Telstra Research Laboratories until September 2002. He worked on novel data mining algorithms for the mobile phone customer database, as well as a grammatical inference package (now proprietary). After working at Telstra, he enrolled as a full-time PhD student of the University of Queensland supported by the C. H. Bennett bequest and the German Government DAAD scholarship. He is currently located at the Max Planck Institute in Tübingen, Germany.

Hsiao-Fan Wang has been teaching at the Department of Industrial Engineering and Engineering Management, National Tsing Hua University, Taiwan, ROC after she graduated from Cambridge University in 1981. She has been the head of the Department of IEEM, National Tsing Hua University, president of the Chinese Fuzzy Systems Association, and vice president of the International Fuzzy Systems Association. She has also been awarded the Distinguished Research Award from the National Science Council of Taiwan, ROC and now she is the contracted research fellow of NSC. Her research interests are in multicriteria decision making, fuzzy set theory, and operations research.

Miao-Ling Wang received her PhD in industrial engineering from National Tsing-Hua University (1995). She is now a vice professor with the Department of Industrial Engineering and Management, Minghsin University of Science & Technology, Taiwan, ROC. Her main research interests are in fuzzy set theory and multiobjective linear programming.

Yi Wang currently works as a production engineer at Intel Chengdu, China. He received an MSc in computer integrated manufacturing from Nanyang Technological University, Singapore and a BEng in mechanical engineering from Sichuan University, China. He has worked as a production engineer in Singapore and as a college lecture in China. His research interests include design theory and supply chain management.

Michiel van Wezel received his MSc in computer science from Utrecht University (1994), and his PhD in computer science (artificial intelligence) from Leiden University (1994). He is currently working as an assistant professor at the Econometric Institute of the Erasmus University Rotterdam, The Netherlands where his main research topic is the application of machine learning in marketing, management science and e-business.

Kit Po Wong obtained his MSc, PhD and DEng degrees from the University of Manchester, Institute of Science and Technology (1972, 1974 and 2001, respectively). Professor Wong was with The University of Western Australia since 1974. He is currently chair professor and head of the Department of Electrical Engineering, The Hong Kong Polytechnic University, Hong Kong. Professor Wong received three Sir John Madsen medals (1981, 1982 and 1988) from the Institution of Engineers Australia, the 1999 Outstanding Engineer Award from IEEE Power Chapter Western Australia and the 2000...
IEEE Third Millennium Award. His research interests include artificial intelligence and evolutionary computation applications to power system planning and operations. Professor Wong was a co-technical chairman of the IEEE ICMLC 2004 conference and general chairman of IEEE PowerCon2000. He is an honorary editor of the *IEE Proceedings in Generation, Transmission and Distribution* and editor (electrical) of the Transactions of Hong Kong Institution of Engineers. He is a Fellow of IEEE, IEE, HKIE and IEAust

**John Yearwood** is deputy director of the Centre for Informatics and Applied Optimisation and the leader of the research group in data mining and informatics. As associate professor, he has published and worked extensively in decision support, computational intelligence, and applications of artificial intelligence to health and law. He currently holds an ARC research fellowship working on argumentation and narrative.

**Yiyang Zhang** is a PhD candidate in the School of Mechanical and Aerospace Engineering, Nanyang Technological University, Singapore. She received her BBA and MBA degrees from the School of Management at Northeastern University, China (1999 and 2002, respectively). Her current research interests are customer decision-making process, product portfolio planning and customer requirement management.
