About the Contributors

Martin Diehl is currently payment system analyst with the Deutsche Bundesbank. His analysis covers mainly TARGET2 and related issues. He is particularly interested in simulations, liquidity efficiency issues and topology of the payment system network. He is a trained economist (Diplom-Volkswirt and M.A. econ.) and philosopher and got his PH.D. from University Gießen, Germany. He joined Deutsche Bundesbank in 1998 as an economist. After five years as head of the speech writing group for the president he was seconded to the embassy in Beijing, serving as a representative of Deutsche Bundesbank to China. In 2008, he joined the department for payment and settlement systems in Deutsche Bundesbank.

Biliana Alexandrova-Kabadjova has been working at the Banco de México since 1997 and currently she is a payment systems analyst. She is a member of the Mexican National System of Researchers since 2009 and is a Visiting Fellow at the University of Essex. Her main contribution has been to build the most advanced model (in terms of complexity and realism) of the payment card market. Further, in relation to financial market infrastructures, she has developed a framework under which one can learn about how the intraday liquidity flows. Alexandrova-Kabadjova has published several refereed journal papers and book chapters, and has co-edited the books “Simulation in Computational Finance and Economics: Tools and emerging applications” and “Analyzing the Economics of Financial Market Infrastructures.” She obtained her first degree with honors on Information Systems at the Instituto Tecnológico y de Estudios Superiores de Monterrey, CCM in 1996. She received her Ph.D. in Computational Finance from the CCFEA from the University of Essex, UK in 2007. Her main research interests are in intraday liquidity, network analysis of market infrastructures and in agent-based computational economics.

Richar Heuver is a statistician in the payments division of the Dutch central bank since 1996. He was involved in the development of the data warehouse of the Dutch Large Value Payment System, closely monitoring statistics during the introduction of the cash euro in 2002. Afterward, he was more actively participating in the research on Large Value Payment Systems. His research focusses on stress scenario analysis, network topology, the interbank money market and identifying behavioural aspects and signs of liquidity problems with banks. Heuver graduated in physical education in 1985 and because of market prognoses started working for the central bank as a statistician in the Economics and Research Department. Since then he moved between several departments, always heavily involved in business intelligence and analysis of financial banking data.
Serafin Martinez-Jaramillo is a senior financial researcher at the financial stability general directorate at Banco de México. His research interests are: financial stability, systemic risk, financial networks, bankruptcy prediction and machine learning. He developed an agent-based financial market to study the link between agent behavior and the stylized facts in stock markets returns. Serafin has published book chapters, encyclopedia entries and papers in high impact international journals like: IEEE Transactions on Evolutionary Computation; the Journal of Economic Dynamics and Control, the Journal of Financial Stability and the International Journal of Intelligent Systems in Accounting, Finance and Management. He has also been member of the editorial committee of international conferences and reviewer of international journals like: IEEE Transactions on Evolutionary Computation, the Journal of Financial Stability, the Journal of Economic Dynamics and Control, Applied Intelligence. Serafin holds a PhD in Computational Finance from the University of Essex, where he is currently a visiting fellow. He has belonged to the Mexican National Researchers System since 2009.

***

Bernardo Bravo-Benitez holds a bachelor’s degree in Actuarial Sciences by the National Autonomous University of Mexico (UNAM) and is a candidate for the Master of Science in Financial Engineering at Columbia University. He has worked as an analyst at the Payment Systems General Directorate of Banco de México for three years. Additionally, he has published papers in international journals: the Journal of Economic Dynamics and Control and Computational Economics. His research interests include: market risk, counterparty and credit risk, systemic risk and financial networks.

Anne-Katrin Brehm is working in Liquidity Management, Institutional Cash & Securities Services at Deutsche Bank AG Frankfurt. Prior to this, she worked in the Asset & Liability Management of Deutsche Bank AG in Singapore. She holds a bachelor’s degree in International Management with specialization in Finance by the International School of Management, Frankfurt am Main.

Louise Carter is a Manager in the Payments Policy Department at the Reserve Bank of Australia, with responsibility on the oversight of international clearing and settlement systems operating in Australia. She joined the Reserve Bank in 2005, and has worked on secondment at the Bank of England in the areas of CCP policy and OTC derivatives reform. She holds a Master’s degree in Economics from the Australian National University.

Liliana Garcia-Ochoa is a planning analyst at the payment systems studies of Banco de México. She currently works on large value payment systems, retail payments and network analysis at Banco de México. Nowadays, she is working on applying evolutionary computation techniques to analize behaviour clustering of financial market infrastructures. Liliana holds an MSc in Computer Science from the Universidad Autónoma Metropolitana (UAM) and a MPP from the Centro de Investigación y Docencia Económicas (CIDE).

Christian Goerlach is the Head of Balance Sheet & Liquidity, Institutional Cash & Securities Services at Deutsche Bank AG. In this role, he leads a global team dealing with topics such as Liquidity-, Interest Rate- and Balance Sheet Management, Collateral Solutions, Funds Transfer Pricing and Intraday Liquidity Management. Previous positions include Asset & Liability Management, Treasury and Strategy.
Jennifer Hancock is a Senior Manager in the Payments Policy Department at the Reserve Bank of Australia, with the responsibility for leading its oversight of payment systems, intermediaries and the markets. She joined the RBA in 2002, with the majority of her career spent working in the Payments Policy Department. She has experience in regulation and oversight of retail and wholesale payment systems, as well as central counterparties and securities settlement systems. Her current responsibilities include contributing to international policy making and inter-agency efforts to ensure that Australia’s regulatory framework for over-the-counter derivatives is consistent with best practice. Jennifer has previously co-authored two simulation studies of real-time gross settlement systems. She holds a Master’s degree in Economics from the University of New South Wales.

Ronald Heijmans is a researcher and policy maker in the payments division at the De Nederlandsche Bank since 2006. The focus of his policy work is on legal aspects and statistics of the euro-area ‘Large Value Payment System,’ TARGET2. His research interest is in stress scenario analysis, network topology, the interbank money market, identifying behavioural aspects, signs of liquidity problems with banks and quantitative oversight. Heijmans obtained his PhD in Business and Economy from the University of Groningen in 2012 and graduated from the University of Leiden in 2001 with an MSc in astrophysics. From 2001 to 2006 he was a researcher for the Netherlands Organisation for Applied Scientific Research. His main research areas were stealth techniques for military vehicles and atmospheric modeling.

Alexandros Kaliontzoglou obtained his Diploma in Electrical and Computer Engineering in 2000 and his Ph.D. in Information Systems Security in 2006 from the National Technical University of Athens, Greece. He has extensive experience in the consultant and banking industries and has participated in several E.C. research projects in the fields of information systems security, e-business and e-government. He has authored several publications in the above areas. Since 2009, he has been working as an expert in information systems security for the Bank of Greece in the field of Payment Systems Oversight. His responsibilities focus on payment systems operational reliability assessment and payment instruments security and fraud monitoring. He is an information systems security expert for the SecurePay Forum ESCB initiative. His current research interests focus in payments pattern analysis.

Kasperi Korpinen is an Economist and project manager at the Bank of Finland’s payments and securities settlement system simulator team under the Financial Stability and Statistics department. Formerly, he has worked for the global Accounting and Control Risk management functions of the Corporate Treasury of Nokia Corporation and the Monetary and Financial Statistics department of the Bank of Finland. He holds a Master’s degree in economics and has pursued additional studies in computer sciences, mathematics, statistics and sociology. He has research experience with topics like interest rate formation of corporate bank loans and bank competition, liquidity need effects of Financial Market Infrastructures (FMI) mergers, liquidity risks and counterparty exposures of FMI participants and economic warning signal development and computational parallelization. Kasperi has strong experience in the development of large and complex applications: Risk monitoring and reporting systems, statistical production systems with signal monitoring and error detection and simulation based modelling systems.

Susan Kyriette-Dodds graduated in Economics at the University of Paderborn. After working as an analyst at the Federal Statistical Office in Wiesbaden, she received her PhD at the University of Basel.
Carlos León is responsible for investigating and developing methodologies for comprehensively overseeing local market’s financial institutions and infrastructures as the Research and Development Manager at the Central Bank of Colombia’s Financial Infrastructure Oversight Department. He is currently focusing on the assessment of systemic importance and intraday liquidity risk, and on identifying the connective and hierarchical structure of financial networks. Present interests include network theory, fuzzy logic, fractal theory, portfolio optimization, risk management, and simulation methods. Prior working experience includes positions as a Researcher for the Central Bank of Colombia’s Foreign Reserves Department and for the Operations and Market Development Department, and as Head of the Risk Management Group at Colombia’s Ministry of Finance-Public Credit Directorate. He holds a M.Sc. in Banking and Finance from HEC-Université de Lausanne (Switzerland), a M.A. in International Economics and a B.A. in Finance and International Relations from Externado de Colombia University (Colombia). He is PhD from Tilburg University (The Netherlands).

Bradley Lonnen is working in Market Management, Institutional Cash & Securities Services at Deutsche Bank AG.

Jorge Cruz Lopez is a Principal Researcher in the Financial Markets Department and an Associate Coordinator of the Financial System Review (FSR) at the Bank of Canada. His research interests are asset pricing and financial risk management. His most recent work focuses on optimizing collateral systems, assessing the stability of central counterparties (CCPs), identifying systemic risks in derivative transactions and improving the allocation of reserve portfolios. As an Associate Coordinator of the FSR, he oversees and undertakes analytical work related to the assessment of systemic risks in Canada. Jorge holds a PhD in Finance from Simon Fraser University and has been a visiting scholar at HEC Paris in France and at Queensland University of Technology in Australia.

Mark Manning is Deputy Head of Payments Policy Department at the Reserve Bank of Australia, with responsibility for the Reserve Bank’s oversight of payments, clearing and settlement systems and associated policy and research. He joined the Reserve Bank in 2008 on secondment from the Bank of England, returning in a permanent role at the start of 2012. Previously, he held a number of positions at the Bank of England in the Financial Stability Directorate, including in financial market infrastructure policy and research, prudential policy and market surveillance. Before entering central banking in 2002, Mark spent several years as a fund manager in the City of London, including spells at Goldman Sachs Asset Management and Kleinwort Benson Investment Management. Mark has published a number of articles and research papers on payments and financial market infrastructure issues, and is co-editor of a book entitled The Economics of Large-value Payments and Settlement: Theory and Policy Issues for Central Banks. He holds Masters Degrees in Economics and Finance from University College London and the London Business School, respectively.

Dietmar Maringer is a full professor at the Business and Economics Faculty at the University of Basel, Switzerland. His research interests include simulation techniques and methods from computational intelligence and evolutionary methods, applied to financial and economic problems, including market regulation, portfolio optimization, risk management, artificial markets, and high-frequency trading. He holds degrees in computing and finance from the Universities of Vienna, Austria, and Cambridge, UK.
Marco Massarenti’s career in central banking started in 2010, working on payment statistics in the Directorate General Statistics. He then joined the Directorate General Payments and Market Infrastructures, where he conducted research on money markets using TARGET2 payments data. He finally joined the Directorate General Market Operations in 2013 working as a Market Operations Expert on operational activities and as project manager. His career also comprises two short work experiences at the Deutsche Bundesbank.

Alistair Milne is Professor of Financial Economics and Co-Director of the Centre for Post Crisis Finance, School of Business and Economics, Loughborough University; also Visiting Scholar, Monetary Policy and Research Department, Bank of Finland and current president of the International Banking, Economics and Finance Association (www.ibefa.org). He is the author of one of the most comprehensive books on the global financial crisis of 2007-2008 and has written more than 60 articles and book chapters on topics including bank capital management and regulation; economics and competition policy in payment and transactions systems; the role of banks in the macroeconomy; credit risk modelling; bankruptcy costs and corporate decisions; development finance; and real estate markets. He is regularly interviewed by UK and international media and invited to speak at industry and policy events, for example (Oct 2012, Sept 2013) at SIBOS the world’s largest financial services conference on standard setting and (Oct 2011) on the subject of clearing and settlement networks to the chairman and members of the Federal Reserve Board Prior to joining Loughborough University he was for twelve and half years senior lecturer/ and reader at Cass Business School. Before this he was: an economic adviser to the financial intermediaries division, of the Bank of England; a lecturer in the Department of Economics, University of Surrey; a research fellow in the macroeconomic forecasting group at London Business School; an economist at HM Treasury; a research assistant at the Department of Economics, Birkbeck College; held an ODI fellowship to National Statistics Office, Zomba, Malawi; and taught for one year at a secondary school in Western Kenya. He holds a PhD from the London School of Economics and a BA/MA from King’s College Cambridge.

José Luis Molina-Borboa is a financial researcher from Banco de México, where he has been using network and statistical models to study financial stability and measure systemic risk in Mexico since 2013. He holds a BSc. in Applied Mathematics from Instituto Tecnológico Autónomo de México (ITAM), having taken some courses at Université Paris-Dauphine. He has published in the Journal of Network Theory in Finance.

Alexander Mueller studied economics and political science in Freiburg (Germany) and Lille (France), graduating with a diploma in economics and a master’s degree in political science. Since 2012, he has been working as an expert for payment system analysis in the Deutsche Bundesbank’s division responsible for Strategy, Policy and Oversight in Payments and Securities Settlement. His responsibilities and current research activities are focused on simulation studies and the analysis of data derived from payment systems.
Masashi Nakajima is PhD in Economics and Professor of Faculty of Economics and Business Administration at Reitaku University, Japan. He had a long career at a central bank, i.e., the Bank of Japan (BOJ). During his career at the BOJ (1981-2006), he gained a wide range of experience as a central banker, holding senior positions in various departments. He also had experience working for the Bank for International Settlements (BIS) in 2003-2005. He distinguishes himself as a coauthor of “All about Payment Systems” (2013, 3rd edition, in Japanese) and “All about Securities Settlement Systems” (2008, 2nd edition, in Japanese), and an author of “Payment System Technologies and Functions” (2011, in English). These books cover a wide-range of payment and settlement system issues and are regarded as must-read books on the subject of payment and settlement systems. He is also the author of “All about SWIFT” (2009, in Japanese), which is the first book in the world in any language to give a comprehensive presentation of SWIFT that is the essential global provider of secure financial messaging services.

Jhonatan Pérez is responsible for monitoring the activity of local securities markets (corporate and sovereign fixed income, and equity) as the Specialized Professional for local markets at the Central Bank of Colombia’s Financial Infrastructure Oversight Department. His work places an emphasis on supporting their legal framework from a central bank’s macro-prudential perspective and on assessing systemic risk. Also, he undertakes research projects about issues related to the securities market and their architecture. Present interests include Central Securities Depository´s (CSD) business lines (clearing and settlement, custodian services, securities lending), risk management, network theory and simulation methods. Prior working experience includes positions as Futures Analyst at the Colombian Stock Exchange, as well as trainee at Central Bank of Colombia’s Operations and Market Development Department. He holds a B.Sc. in Industrial Engineering from Universidad Industrial de Santander (Colombia) and specialized courses in network science (Michigan University) and financial markets structure (Yale University), among others.

Anna Pliquett joined the Deutsche Bundesbank twelve years ago as a bank examiner in the banking supervision. There she had the opportunity to follow the development of the Basel II framework and by conducting on-site inspections its implementation in German banks in practice as well. After six years in the banking supervision she moved to the central office of the Bundesbank and became actively involved in several work streams concerning exchanges, financial market infrastructures and financial stability. Her current division at the Bundesbank is responsible for payment and securities settlement systems. She is acting Head of Section of the oversight function of the Bundesbank concerning financial market infrastructures. Her main responsibilities include the monitoring and assessment of CCPs and policy work regarding CCPs, OTC derivatives and trade repositories. Prior her joining the German central bank she spent two years in the US and held the position of a compliance officer with a middle-sized broker-dealer. Her firm motivated her to join the CFA Institute, which lead to her receiving the CFA charter in 2006, already as a central banker in Germany. Before her time in the US, Anna earned an MBA in Economics from the former university of economic sciences in Budapest, Hungary, and a finance diploma from the University of Leipzig, Germany.
About the Contributors

Luc Renneboog is Professor of Corporate Finance at Tilburg University and Director of Graduate Studies at the CentER for Economic Research; he is also visiting Professor at Cambridge University. Before joining Tilburg, Luc was at the Catholic University of Leuven and Oxford University. He was also a visiting professor at the London Business School, HEC Paris, Venice University, University Paris-Dauphine, University of Cardiff, and European University Institute (Florence). He has graduated from the University of Leuven with an MSc in commercial engineering and with a BA in philosophy, from the University of Chicago with an MBA, and from the London Business School with a PhD in Financial Economics. He is also a research member of CentER for Economic Research, TILEC (Tilburg Law and Economics Center) and ECGI (European Corporate Governance Institute, Brussels). His research interests are corporate governance, mergers and acquisitions, law and economics, ethical/socially responsible investing, and alternative investments (such as art, diamond markets). On these topics, he has published in the Journal of Finance, Management Science, American Economic Review, Journal of Financial Intermediation, Journal of Law and Economics, Journal of Corporate Finance, Strategic Management Journal, Journal of Banking and Finance, Cambridge Journal of Economics, Oxford Review of Economic Policy, and others.

Antoaneta Sergueieva is Chair of the Computational Finance and Economics Technical Committee at the IEEE Computational Intelligence Society, and member of the Financial Computing and Analytics Group at University College London (UCL). She is Program Director for the UCL MSc Financial Computing, and Partnership Director at UCL for the partnership between the University of California (UC)-Berkeley’s Haas School of Business and UCL Computer Science. Antoaneta has been a Visiting Fellow at the US Treasury Office of Financial Research, the Bank of England, and the Bank of Mexico. She has also been on sabbatical at UC-Berkeley, a Fellow at the New England Complex Systems Institute, and has recently joined the Centre for Computational Finance and Economic Agents at the University of Essex as a Visiting Fellow. Antoaneta holds an MEng in systems engineering, MBA in finance, PhD in computer science, and currently works on her PhD in applied mathematics focused on systemic risk, within the Financial Mathematics Research Group at King’s College London. She has also supervised PhD students and four of them have already successfully completed their studies.

Aaron Unterman is Senior Legal Counsel in the Derivatives branch of the Ontario Securities Commission. He participates in the development of OTC derivatives policy and regulation through his involvement in the Canadian Securities Administrators OTC Derivatives Group, the OTC Derivatives Regulators Group, and the IOSCO Task Force on Derivatives. He is the author of a number of publications, including Exporting Risk: Global Implications of the Securitization of U.S. Housing Debt and Innovative Destruction: Structured Finance and Credit Market Reform in the Bubble Era; both of which were published in the University of California’s Hastings Business Law Journal. Aaron is a former member of Osler, Hoskin & Harcourt LLP’s Banking and Financial Services Group.
