About the Authors

Keng Siau is a J.D. Edwards Professor and an Associate Professor of Management Information Systems (MIS) at the University of Nebraska, Lincoln (UNL). He is also the Editor-in-Chief of the Journal of Database Management. He received his Ph.D. degree from the University of British Columbia (UBC) where he majored in Management Information Systems and minored in Cognitive Psychology. He has published more than 35 refereed journal articles, and these articles have appeared in journals such as MISQ, CACM, IEEE Computer, Information Systems, ACM’s Data Base, Journal of Database Management, Journal of Information Technology, International Journal of Human-Computer Studies, Transactions on Information and Systems, and others. In addition, he has published over 55 refereed conference papers in proceedings such as ICIS, ECIS, HICSS, CAiSE, IRMA, AMIS, and HCI. He has edited three books, three journal special issues, and six proceedings—all of them related to systems analysis and design. Dr. Siau’s primary research interests are Object-Oriented Systems Development Using Unified Modeling Language (UML), Enterprise E-Business, Enterprise Resource Planning (ERP), and Web-based Systems Development. He has served as the Organizing and Program Chairs for the International Workshop on Evaluation of Modeling Methods in Systems Analysis and Design (EMMSAD) (1996–2001). More information about him can be obtained at URL: http://www.ait.unl.edu/siau/.

Jin-Kyun Ahn is a M.S. student at the Department of Management Information Systems, KAIST. He received a B.A. degree in Industrial Design from KAIST in 1993, and completed his M.S. degree from KAIST, Daejon in 1996. Mr. Ahn’s research includes data mining and decision support systems.

Youssef Amghar received a Ph.D. (Computer Science) in 1989. Since 1990, he has been Assistant Professor in Information Systems at the National Institute of Applied Sciences in France. His research expertise lies in the areas of active databases, integrity constraints, and various aspects of Information System Design Methodologies. Another domain of his research activity concerns documentation aspects (XML, document modeling).

Akhilesh Bajaj is Assistant Professor of Information Systems Management at the H. John Heinz III School of Public Policy and Management, at Carnegie Mellon University. He received a B.Tech. in Chemical Engineering from the Indian Institute of Technology, Bombay, an M.B.A. from Cornell University, and a Ph.D. in MIS (minor in Computer Science) from the University of Arizona. Dr. Bajaj’s research deals with the construction and testing of tools and methodologies that facilitate the construction of large organizational systems, as well as studying the decision models of the actual consumers of these information systems. He has published articles in several academic journals and conferences. He is on the editorial board.
of the *Journal of Database Management*. He teaches graduate courses on basic and advanced database systems, as well as enterprise-wide systems. Akhilesh can be contacted at akhilesh@andrew.cmu.edu.

**Mira Balaban** is Senior Lecturer in the Dept. of Information Systems Engineering at Ben-Gurion University, Israel. She holds a B.Sc. in Mathematics and Statistics (1970) from Tel-Aviv University, and a M.Sc. and Ph.D. in Computer Science from Weizmann Institute of Science (1975 and 1982). She also graduated in music performance (1969) from the Rubin Academy of Music in Tel-Aviv. Her research areas are artificial intelligence, conceptual modeling, databases, programming languages, and computer music. In artificial intelligence, she works on knowledge representation and temporal reasoning, temporal constraints, and description logics. In conceptual modeling and databases, she works on semantics of databases, integrity enforcement and extensions of conceptual models, and in computer music, she develops knowledge representation tools for music concepts and processes. Dr. Balaban has published extensively in these areas, and is co-editor of a paper collection on computer music. She organized several international workshops on AI and music, and served as a member of the program committee of several conferences on computer music and on artificial intelligence.

**Qing Cao** is an Assistant Professor of MIS at the University of Missouri-Kansas City. He has co-authored several journal articles. His current research interests include software engineering and data modeling, and their applications to e-commerce. He served as a consultant for various organizations in the areas of management information systems and operations management.

**Amita Goyal Chin** is an Associate Professor in the Information Systems Department at Virginia Commonwealth University. She received her B.S. in Computer Science and M.S. and Ph.D. in Information Systems, all from The University of Maryland at College Park. Her research focuses primarily on database technology and its applications in information systems. She has been investigating new approaches in data models for text representation and document databases, hoping this area will contribute to information delivery vehicles beyond the World Wide Web. Additionally, she is also pursuing new answers to managing data quality in database systems. Dr. Chin has combined her information technology experience with her classroom skills to experiment with new teaching technologies and methodologies.

**Jérôme Darmont** received his M.Sc. and Ph.D. degrees in Computer Science from Blaise Pascal University, Clermont-Ferrand, France in 1994 and 1999, respectively. He has been an Assistant Professor and then an Associate Professor at the University of Lyon 2, France, since September 1999. His current research interests include database performance evaluation and optimization, DBMS and data warehouses auto-administration, data mining, and medical databases.

**Brian Dobing** is an Assistant Professor, Faculty of Management, University of Lethbridge, Lethbridge, AB, Canada. He received his B.Sc. in Mathematics from the University of Victoria, his M.B.A. and M.Sc. in Computational Science from the University of Saskatchewan, and his Ph.D. from the University of Minnesota. His research focuses on issues in user-analyst relationships and object-oriented analysis.
**About the Authors**

**Dov Dori** is tenured faculty at Technion, Israel Institute of Technology, and Visiting Faculty at MIT. He has been developing and teaching Object-Process Methodology during the past eight years at Technion and MIT. Dr. Dori was an invited speaker at Ford, Kodak, FAA, and Xerox, as well as many universities and international conferences worldwide. He is a Fellow of International Association for Pattern Recognition and a Senior Member of IEEE. He wrote over 130 articles and book chapters. He holds a B.Sc. in Industrial Engineering, a M.Sc. in Operation Research, and a Ph.D. in Computer Science. He is founder of Sight Code, Inc. (www.sightcode.com), which is developing Systemantica® to support OPM.

**Andre Flory** is a Full Professor of Databases and Information Systems in the Department of Computer Sciences at the National Institute of Applied Sciences (INSA) of Lyon (France) since 1989. He is currently the Director of the Computer Sciences Resources Center of the Institute. From 1970 to 1979 he was Associate Professor at the Claude Bernard University (Lyon) and from 1979 to 1998 Professor in the MIS department of Jean Moulin University (Lyon). He has served as a visiting professor at the MIS Department of the University of Minnesota in 1984. He has worked on database design for many years, and his current research interest is medical information systems. He is author of more than 100 papers published in conference proceedings, books and scientific journals. He has served on the program committees of many international conferences and has participated in several research projects sponsored by the French government. He also served as an expert at the European communities.

**Terry Halpin**, B.Sc., Dip.Ed., B.A., M.Lit.Stud., Ph.D., is Program Manager in Database Modeling, Enterprise Framework and Tools Unit, at Microsoft Corporation in Redmond, CA. Formerly an academic in Computer Science, he headed database research at Asymetrix Corporation, InfoModelers Inc., and Visio Corporation, now part of Microsoft. His research focuses on conceptual modeling and conceptual query technology for information systems, using a business rules approach. He has presented at dozens of international conferences in both industry and academia. His doctoral thesis formalized Object-Role Modeling (ORM/NIAM), and his publications include over ninety technical papers and four books, including *Information Modeling and Relational Databases*, published by Morgan Kaufmann.

**Soon-Young Huh** is an Assistant Professor of Management Information Systems at the Korea Advanced Institute of Science and Technology (KAIST). He received a B.S. degree in Electronics Engineering from Seoul National University in 1981, an M.S. degree from the KAIST, Seoul in 1983, and a Ph.D. from the University of California, Los Angeles in 1992. Dr. Huh has published articles in such journals as *Decision Sciences*, *International Journal of Intelligent Systems in Accounting, Finance and Management*, *Omega*, and the *Journal of Systems and Software*. He has also presented his research at Conferences such as Decision Science Institute Conference and INFORMS. Dr. Huh’s research deals with abstraction database application to business systems, model management, object-oriented database approach to decision-support systems, and intelligent approaches in financial trading systems.

**Christian S. Jensen** is a Professor of Computer Science at Aalborg University, Denmark, and an Honorary Professor at Cardiff University, UK. His research concerns data management technology and spans issues of semantics, modeling, and performance. He has authored or coauthored more than 100 scientific papers in the database area. He is on the editorial
boards of ACM TODS and IEEE TKDE. He was the general chair of the 1995 International Workshop on Temporal Databases and a vice program committee chair for the 1998 IEEE ICDE Conference. He was co-program committee chair for the Workshop on Spatio-Temporal Database Management, held with VLDB’99, and for the 2001 International Symposium on Spatial and Temporal Databases, and he is the program committee chair for the 2002 EDBT Conference. He also serves on the boards of directors for a small number of companies.

Trevor H. Jones qualified as a management accountant through the Institute of Management Accountants (CIMA), London, England in 1979. He then moved to the United States where he attended graduate school at the Universities of South Florida and Maryland Eastern Shore, earning an M.Sc. in Applied Computer Science, May 1991. He went on to attend Drexel University, Philadelphia, earning his Ph.D. (Information Studies) in May 1995. Dr. Jones is currently Dept. Chair and Associate Professor of Information Technology at the Schools of Business Administration, Duquesne University, Pittsburgh, PA. His current research interests include conceptual modeling for database design, technology application in e-commerce, and, in a different domain, the use and effectiveness of technology in education.

Judith Kabeli is a Doctoral student at the Department of Information Systems Engineering at Ben-Gurion University, Israel. She earned her B.Sc. and M.Sc. degrees in Mathematics and Computer Science (1994) from Ben-Gurion University. Prior to her Ph.D. studies, Judith held professional and managerial position at the Israel Aircraft Industries. Kabeli’s research interests including data modeling, information systems analysis and design, and intelligent web-based user interfaces. Her doctoral dissertation is concerned with the development and testing of FOOM methodology.

Peter Kawalek gained his Ph.D. from the Department of Computer Science, University of Manchester, UK. He worked as a Research Fellow for that department, engaging with industry on many research and consultancy projects. He subsequently moved to Warwick Business School, University of Warwick, and then to Manchester Business School. He has published two books as well as several journal and conference papers. Recent projects have focused on organizational IT capability, software flexibility and process reengineering. Working with David Wastell, he has been involved in the development of major e-government initiatives.

Mehdi Khosrow-Pour has taught undergraduate and graduate information system courses at the Pennsylvania State University for 20 years where he was the chair of the information Systems Department for 14 years. He has also lectured at the Florida International University, American University, University of Lyon (France), University of West Indies (Jamaica), Kuwait University, University Carlos III - De Madrid, and Tehran University (Iran). He is currently the Executive Director of the Information Resources Management Association (IRMA) and Senior Editor for Idea Group, Inc. He is also the Editor-In-Charge of the Information Resources Management Journal (IRMJ), the Annals of Cases on Information Technology (ACIT), the Information Management (IM), and consulting editor of the Information Technology Newsletter (ITN). He also serves on the editorial review board of seven other international academic information systems journals. He is the former Editor-In-Charge of the Journal of End User Computing and the Journal of Database Management. Dr. Khosrow-Pour is the author/editor of more than 20+ books on various topics of

**Ramayya Krishnan** is the W. W. Cooper and Ruth F. Cooper Professor of Information Systems at Carnegie Mellon University. He holds appointments at the Heinz School of Public Policy and Management. Krishnan’s research interests are in e-business technology, management and policy issues. His work on these topics has been funded by DARPA, Army Research Office, and the National Science Foundation. Krishnan serves on the editorial board of several Information Systems journals. He recently co-edited a special issue of *Interfaces* (available online at http://pubsonline.informs.org/feature/) and is currently co-editing special issues of *Management Science on E-business*.

**Frederique Laforest** received the title of Engineer in Computer Science from the National Institute of Applied Sciences of Lyon (INSA Lyon - France) in 1993. She received a Ph.D. degree in Computer Science at INSA Lyon in 1997 with a thesis entitled “Generic models and user interfaces—application to medical information systems.” From 1996 to 1998, she was Assistant Professor at the Department of Informatics of the Technological Institute of Lyon University. Since 1998, she is Associate Professor at the Telecommunications, Services and Uses Department of INSA-Lyon. Her teaching fields are Algorithms and Programming, Databases, Operating Systems and Information Systems. Since 1993, she is working in the Information Systems Laboratory (LISI). Her major research topics concern information systems, documents and databases.

**Heeseok Lee** is an Associate Professor of MIS at Korea Advanced Institute of Science and Technology (KAIST). He received his doctorate in Management Information Systems from the University of Arizona. He taught MIS for the University of Nebraska at Omaha during 1992-1994. His research interests include information strategy, digital business, and knowledge management. He has published in *Journal of Database Management, Information and Management, Omega, Information Systems, Journal of Systems and Software, Information Processing and Management*, and *Annals of Operations Research*.

**Madjid Meziane** received his Ph.D. degree in Computer Science from the National Institute of Applied Sciences in France in 1998. His research interests include active database and design methodologies. His is currently junior manager at PEUGOT (France) and works on a project concerning software maintenance and application re-documentation.

**Kae-Hyun Moon** is a Ph.D. student at the Department of Management Information Systems, KAIST. He received a B.A. in Management Science from KAIST in 1994, and M.S. from KAIST, Seoul, in 1996. Mr. Moon’s research includes intelligent query processing and decision-support systems.
Jeffrey Parsons is Professor of Information Systems in the Faculty of Business Administration at Memorial University of Newfoundland. He received a Ph.D. from The University of British Columbia. His research interests include systems analysis and design, database management, and electronic commerce. His research has been published in journals such as *Management Science*, *Communications of the ACM*, and *ACM Transactions on Database Systems*.

Parag Pendharkar is Assistant Professor of Information Systems at Penn State Harrisburg. His research interests are artificial intelligence and expert systems. His work has appeared in *Annals of Operations Research*, *Communications of ACM*, *Decision Sciences*, and several others. He is a member of INFORMS, APUBEF, and DSI.

Rosanne Price is a lecturer at RMIT University, Australia. She is currently completing her Ph.D. at Monash University, where she previously worked as an assistant lecturer. She received her M.Sc. in Computer Science from National University of Singapore, B.A. in Biology from Vassar College, was a visiting student in the Computer Science Department of M.I.T., and a research intern at Bell Laboratories in Murray Hill. After work in industry in medical computing, she joined the staff of the Institute of Systems Science (National University of Singapore) researching multimedia database and information retrieval systems and later worked as a lecturer for Boston University and University of Maryland’s Masters in Computer Science program in Germany. Her main interests are conceptual data modeling, multimedia/object-oriented databases, and information retrieval.

James A. Rodger is an Associate Professor of Management Information Systems at Indiana University of Pennsylvania. He received his Doctorate in MIS, from Southern Illinois University at Carbondale, in 1997. Dr. Rodger teaches Network Administration, System Architecture, Microcomputer Applications and Intro to MIS, at IUP. He has worked as an Installation Coordinator for Sunquest Information Systems, and presently does consulting work on Telemedicine Connectivity for the Department of Defense and Management Technology Services, Inc. Dr. Rodger has published several journal articles related to these subjects. His most recent article, “Telemedicine and the Department of Defense,” was published in *Communications of the ACM*.

Michel Schneider is Full Professor in Computer Science at Blaise Pascal University, Clermont-Ferrand, France. He has been contributing for many years to the development of this discipline. He is presently in charge of the Computer Science Doctoral School. His current research interests include clustering in object-oriented databases, benchmarking, document retrieval, and web-based systems.

Peretz Shoval is Professor of Information Systems and head of the Department of Information Systems Engineering at Ben-Gurion University, Israel. He earned his B.Sc. in Economics (1970) and M.Sc. in Information Systems (1975) from Tel-Aviv University, and Ph.D. in Information Systems (1981) from the University of Pittsburgh, where he specialized in expert systems for information retrieval. In 1984, he joined Ben-Gurion University, where he started the Information Systems Program in the Department of Industrial Engineering & Management. Prior to moving to academia, he held professional and managerial positions in computer companies and in the IDF. Prof. Shoval’s research interests include information systems analysis and design methods, data modeling and database design, and information retrieval and filtering. He has published numerous papers in journals and presented his
research in many conferences. Shoval has developed methodologies and tools for systems analysis and design, and for conceptual and logical database design.

Il-Yeol Song is a Professor in the College of Information Science and Technology at Drexel University, Philadelphia, PA. He received his M.S. and Ph.D. degrees in Computer Science from Louisiana State University in 1984 and 1988, respectively. His current research areas include database modeling and design, design and performance optimization of data warehousing, OLAP, object-oriented analysis and design, and object-oriented modeling. He has published over 80 refereed articles in various journals, conferences, and books. He has been the guest editor for several journals, including Journal of Computer and Software Engineering (1995) and Journal of Computer Science and Information Management (1999). He served as the program co-chair for CIKM99, DOLAP98 and DOLAP99.

Woojong Suh is a research fellow of e-Business Research Center at POSCO Research Institute (POSRI) in Korea. He received his doctorate in Management Information Systems from Korea Advanced Institute of Science and Technology (KAIST). He received his bachelor's degree and master's degree in Applied Statistics from Yonsei University, Korea. His research interests include hypermedia information systems, e-business strategy, workflow analysis, and knowledge management.

Nectaria Tryfona is an Associate Professor in Department of Computer Science, Aalborg University, Denmark. Her research interests are in the area of database modeling, geographic information systems design, spatiotemporal information systems, and spatial data mining. She is the author of various articles in books, journals, and conference proceedings. She received her Dipl. Eng. and Ph.D. from the Department of Computer Engineering and Informatics, University of Patras, Greece, in 1991 and 1994, respectively. She was with the National Center of Geographic Information and Analysis at the University of Maine as Post-Doctoral Research Associate from 1995 to 1997. She continues to serve as a program committee member in ACM GIS, STDBM, ISD, IDEAS, and as external reviewer for ICDE, CaiSE, COSIT, SSDBM, GeoInformatica Journal and International Journal of GIS.

David Wastell gained his Ph.D. from the Applied Psychology Unit at Cambridge University, UK. He worked for a number of years lecturing in Information Systems at the Department of Computer Science, University of Manchester. He moved from there to his current position as Chair of the Information Society in the Information Systems Institute, University of Salford. He publishes regularly in major journals and conferences. He has undertaken many research and consultancy projects. Two prominent recent projects are the development of e-government initiatives at Salford City Council, and the Multi-Agency Data Exchange (MADE) for Community Safety in Lancashire.

Jonathan Whittle received his B.A. degree in Mathematics from the University of Oxford in 1995. He obtained a Masters degree in Artificial Intelligence in 1996 and a Ph.D. in Formal Methods in 1999, from the University of Edinburgh, Scotland. He now works in the Automated Software Engineering Group at NASA Ames Research Center, Moffett Field, CA. His research interests lie in making lightweight Formal Methods practical and usable. His Ph.D. concentrated on developing an editor for functional programs that incrementally carries out sophisticated forms of static analysis. He has also written papers on applying lightweight analysis to UML models.
