Index

A
a priori 35
abstract syntax 308
abstract value 213
abstraction barrier 8
abstraction level 213
active behavior 147
active database 134
Actor-Network Theory (ANT) 97
ADISSA methodology 59
aeromedical evacuation suitcase 274
aggregate metrics 297
aggregation 37
algorithm 167
Alloy Constraint Analyzer 333
anchoring and adjustment 371
application 229
application-oriented meta-information systems 250
approximate join 221
approximate operator 221
approximate selection 218
arity 3, 311
association 37, 310
association level 352
attribute modification 8
attribute updates 44
automation 113

B
base case 174
behavior specification 144
behavioral stratification 149
binary 4

Binary Decision Diagrams (BDDs) 331
binary relationship types 7
business adaptation 119

C
C4ISR networks 268
canvas view 237
cardinality constraints 4, 23, 147
clarity of a language 308
classical information system 193
classification scheme 233
cluster 243
clustering effect evaluation 53
CMU-WEB schema 237
code column 198
cognitive overhead 234, 242
cognitive psychology 376
coherence 234
cohesion 243
complex transaction 75
complexity management problem 88
conceptual clustering approach 212
conceptual data modeling 17
conceptual join 222
conceptual schema optimization 318
conceptual selection 220
concrete syntax 308
connect method 12
consistency 242
Constrained Ternary Relationship (CTD) Rule 24
container objects 40
content-dependent metadata 251
control type 253
coupling 243
credit card transactions 92
Cybernetics 120
cyclomatic complexity measure 295

D
data allocation 157
data flow diagrams 136, 369
database administrator 157
database evolutions 44
database instance 6
database level operations 8
database system extension 152
DDL (data definition language) 2
declarative knowledge 110
decomposition 24
Defense Information Systems Network (DISN) 268
degree of support for interrelated events 229
deletion constraint 29
derivation rules 147
design questions 234
destination node 255
determining appropriate 371
difficulty of navigation 235
disconnect method 13
Distributed Database Management System (DDBMS) 156
DML (data manipulation language) 2
document analyzer algorithm 199
document loaning 140
document restitution 140
document type definition (DTD) 190
documents- and rules-based user interface for data 193
dom 6
domain abstraction 214
domain abstraction hierarchy 213
domain-general 113
domain-specific 113
drill-down search 260
DRO (Detection & Reclustering of Objects) 34
DSTC (Dynamic, Statistical, Tunable Clustering) 34
dynamic anchor 253
dynamic-sized objects (DO) 40

E
EDMS (Electronic Document Management System) 250
EER schema 2
efficiency of use 235
elementary methods 67
encapsulation 374
encapsulation problem 87
encoding 109
Engineering Integrated Product Team (E-IPT) 280
enhanced ER (EER) 1
entities 309
entity relationship (ER) 1, 17
type 3
Entity-Relationship-Event-Rule (ERER) 137
event 229
event-condition-action (ECA) 135
exclusion constraints 316
exhaustive search 168
existence-dependent symbol 346
Explicit Binary Permission (EBP) Rule 23
expressibility of a language 308
extended entity-relationship model (EER) 17
extended ER model 137

F
field medical surveillance system 268
FOOM 58
formal foundation 309
formal methods 323
format-dependent metadata 251
free text documents 190
full REALLOCATE 168
fundamental structural relations 92
fuzzy database approach 212

G
global behavior 139
global coherence 234, 241
graphical model 234, 241
Gray’s Criteria 46
Gray’s Criteria 46
group symbol 346
H
hierarchical automata 332
holistic change vision 271
human information-processing 109
hybrid domain systems 250
Hyperdocument Meta-information System
(HyDoMiS) 248, 254
hyperlink outside application (HLOA) 237
hyperlink within application (HLWA) 237
hypermedia documents 234, 249
hypermedia information systems (HISs) 261
hypermodel benchmark 37
hypermodel database 37
hypermodel operations 37
I
I & I events 232
Implicit Binary Override (IBO) Rule 24
independent metrics 296
information chunk (IC) 237
information chunk depiction (ICD) 237
information modeling 106
information modeling method 107
inheritance 37
insertion constraint 27
integrity methods 2
internal database application 152
J
JINC system 276
justitia benchmark 40
justitia database 40
justitia operations 41
K
key 3
keyword search 260
knowledge abstraction hierarchy (KAH) 211
L
language design 309
Law of Requisite Variety 121
learnability of interface 235
Libretto 268
lightweight data entry tool (LDET) 275
lines-of-code (LOC) 294
local area network (LAN) 274
local behavior 139
local coherence 234, 241
location of processing 229
log-dependent metadata 251
look-across constraint 4
M
management-oriented meta-information systems 250
mandatory key 4
mapping component 201
mapping world base 201
medical equipment sets (MES) 272
medical record domain 191
medical treatment facilities (MTFs) 269
medical workstation (MeWS) 268, 274
memorability of interface 235
menus class 69
message diagram 76
meta-information system 249-50
meta-model 196
metadata 249
metadata classification 251
metadata elements 252
metadata management 254
method engineering 108
method modeling language 296
methods 2
metrics 229
Micro-INC (MINC) data controller 277
model checking 330
model finding 333
model multiplicity problem 88
modeling constructs 108
multiplicity constraints 312
N
n-ary relationship 18
network traffic 236
no events value 231
no processing value 231
node 237, 252
non-binary relationship types 7
O

object base generation 48
object base usage 48
object behavior 143
object cardinality constraints 318
object class 2, 351
object clustering benchmark 34, 41
object constraint language (OCL) 330
object identifier (OID) 34
object role modeling (ORM) 307
object-orientation (OO) 293
object-oriented 104, 105
object-oriented (OO) model 2
object-oriented approach 60
object-oriented context 138
object-oriented database management systems (OODBM) 34
object-oriented databases (OODBs) 34
object-oriented systems 369
object-process diagrams (OPDs) 89
object-process language (OPL) 89
object-process methodology (OPM) 62, 87, 91, 104-105
OCB database 41
OCB operations 43
only independent and idempotent (I&I) events value 231
OO programming software 76
OO-DFDs (object-oriented data flow diagrams) 58
OO7 benchmark 38
OO7 database 39
OO7 operations 39
OPL specification 97
order number 142
organizational hypermedia documents (OHDs) 248
owner entity type 6

P

pages following the Extensible Markup Language (XML) 230
pages following the Hyper Text Markup Language (HTML) 230
pages with completely flexible content 230
paradigm 88
partial REALLOCATE 168
participation constraint 4
partitioning 150
pattern column 198
personal information carrier (PIC) 274
petri nets (PN) 137
primitive objects (PO) 40
primitive update methods 2
procedural knowledge 112
processing on the client and server 231
processing only on the client 231
processing only on the server 231
processing type 253

Q

qualified associations 316
queries 40
query language 211
query processing approach 211

R

radio music programs system 80
reconnect method 14
referential integrity 147
referential type 253
relationship instance 310
relationship type 3, 310
relationship/integrity method 67
ring constraints 318
role name 4
rule stratification 149
rule-based approach 212

S

scenarios 370
schema level operations 8
schema revision 10
semantic gap 375
semantically constraining binary (SCB) relationship 20
semantically unrelated binary (SUB) relationship 20
sequences of interrelated events 231
sequential update 44
server capacity 236
sets of I & I events interspersed with interrelated 231
simple transaction 75
source node 255
spatial constraint 358
spatial cover (SCE) 359
spatial data 341
spatial derivation 358
spatial equal (SE) 360
spatial inclusion (SIE) 359
spatial interior (SI) 359
spatial object class 351
spatial objects 358
spatial part-whole (PW) relationships 358
spatial symbol 347
spatially dependent Association 353
spatiotemporal data 341
spatiotemporal object class 351
spatiotemporally dependent association 353
specialization 6
specific value 213
specification box 346
statecharts 324
static anchor 253
static-sized objects (SO) 40
strongly structured documents 190
structural modification operations 40
structure charts (SC) 59
structure metrics 295
structure of pages 229
structured maps 192
structured system analysis (SSA) 59
structured system design (SSD) 59
sub-systems of the VSM 122
subtypes 6
subtyping 317
supporting module 254
system behavior 73
system-dependent metadata 251

T

tactical medical communications 268
Team Care Automation System (TCAS)
software 276
technical commission 124
Telemedicine 266
temporal object class 351
temporal symbol 347
temporally dependent association 353
temporally dependent spatial object class
351
temporally dependent spatiotemporal
object class 351
ternary relationship 19
ternary-binary combination 21
Theater Clinical Encounter Application
(TCEA) 274
Theater Medical Core Services (TMCS)
268, 274
Theater Telemedicine Prototype Program
(T2P2) 274
Theater Telemedicine Teams (TTTs) 269,
274
themetic symbol 347
Toshiba Libretto end user terminal (EUT)
274
transactions design 59
traversal 39

U

UML semantics 326
UML sequence diagram 325
UML specification 326
unary 4
Unified Modeling Language (UML) 3,
61, 114, 292, 306, 323, 367
unified software development process 366
usability metrics 241
use case 366
use case internal structure 368
use case variations 371
user-interface adjustment 235, 242

V

validation mechanisms 308
value abstraction hierarchy 213
value constraints 147
values 309
viable system model (VSM) 119
view integration 374
Violet Computing (VC) 122
Violet Operating System (VOS) 122
W

weakly structured documents 191
workflow-dependent metadata 251
working memory 109
WWW applications 229
