## Index

### A
- adjunct online tools 146
- Alien Rescue 174, 176
- analogical learning 341
- analogical pictures 69
- analogies emergence in computer simulations 340–361
- application to instruction 55
- arbitrariness 70
- ARCS model 161
- attention, relevance, confidence, and satisfaction (ARCS) model 161

### B
- biologically primary knowledge 2
- biologically secondary knowledge 2
- blogs 145

### C
- cognition and multimedia 111
- cognitive load (CL) questionnaire 40
- cognitive load, convergent measures 44
- cognitive load, measuring 39
- cognitive load, types 37
- cognitive load during multimedia learning activities 34–50
- cognitive load theory (CLT) 36, 139
- cognitive styles 79
- cognitive styles and strategies 198
- cognitive theory of multimedia learning (CTML) 196
- collaborative learning 343
- collaboratively conducted computer simulations 340–361
- computer-based learning (CBL) 155
- conceptual knowledge remediation 272
- conventionalism 71
- customized learning service for concept knowledge (CLICK) 262, 266

### D
- deep learning on the Web 134–153
- digitized storybooks, children’s comprehension 330
- discovery-based learning 217–236
- dual coding theory 219
- dual coding theory (DCT) 112
- dynamic linking 59
- dynamic vs. static visualizations 95

### E
- educational games 312–325
- environmental organizing and linking principle 3
- expectancy-value theory 156
- expressiveness 71
- eye movements 92
- eye tracking 89–107
- eye tracking measures 43

### F
- fostering transfer 240

### G
- game-schema acquisition techniques 312–325
- game narrative types 315
- game schemas 317
- Germane cognitive load for ill-structured domains 141
- goal-setting theory 158
- goal orientation, developing tags and traces 294
- goals orientations, motivated actions 296
- Gutenberg revolution 136
### Index

- **H**
  - humans as information processors 185
  - humans as players 184
  - humans as problem solvers 183
  - humans as socializers 185
  - humans as voluntary actors 185

- **I**
  - idealized environments 58
  - ideology of seeing 342
  - illustrative projects 60
  - individual student knowledge, customization 264
  - information store principle 2
  - inner-city schools, experiments 329
  - instructional consequences 4
  - instructional design in a multimedia context 1–16
  - intelligent tutoring systems (ITs) 264
  - interactive multimedia, issues and problems 222
  - iterative conceptual knowledge building 275

- **K**
  - knowledge utility 204

- **L**
  - laboratory research report 301
  - latent semantic analysis (LSA) 265
  - learner-initiated, complex, reciprocally adaptive (LICRA) searches 143
  - learner characteristics 163
  - learning to see 350
  - learning with visualizations 67–88
  - LICRA searches 143
  - living books in the digital era 326–339
  - living storybooks on language acquisition, effects 331
  - locus 201
  - logical pictures 69
  - ludologists 316

- **M**
  - manipulating multimedia materials 51–66
  - manipulative software, advantages 58
  - memories for transfer success, building 119
  - memory, influence of action on 113
  - metacognition 200
  - modality effect 9
  - model progression 224
  - modularity 70
  - motivational research, essential aspects 162
  - motivation as an important factor 175
  - motivation training 164
  - multimedia instruction, motivational features 163
  - multimedia instructional environments, working memory capacity 20
  - multimedia learning 35
  - multimedia learning, defined 35
  - multimedia learning, motivation 154–172
  - multimedia learning, motivational research 155
  - multimedia learning environment, engaging factors 173
  - multimedia materials, manipulating 51
  - multimedia PBL environment 176
  - multimedia research, progress 110
  - multimedia to trace goal setting in studying, designing 288–311

- **N**
  - narrative-centric learning environments, games 314
  - narrow limits of change principle 3
  - nature of knowledge 201
  - new Gutenberg revolution 136
  - non-spatial information, integrating and consolidating 114
  - notationality 70

- **P**
  - performance-based measures 41
  - phenomena, experiential and interpretive flexibility 346
  - prior knowledge, role 334
  - problem-based learning (PBL) environment 173
  - problem-based learning, delivery 175

- **R**
  - randomness as genesis principle 3
  - re-organising principle 3
  - realistic picture 69
  - redundancy effect 7
  - research design 343

- **S**
  - scaffolding 205
  - self-determination theory 160
  - self-efficacy 158
  - self-regulation 198
  - serendipitous learning 144
  - simulation and the world, simulation 354
Index

spatial information, integrating and consolidating 114
spatial mental models 120
split-attention effect 4
split attention 89–107
split attention conditions, eye movements 92
student-centered learning 201
student-centered multimedia 194–216
student knowledge model 269
support learning from educational games 312

T
tags and traces of goal orientation 294
task-based measures 41
task motivation 158
technology-enhanced learning, cognitive roots 195
technology in PBL delivery 186
temporal dynamics on split attention 89–107
time constraints on split attention, effects 97
trace data, analyzing 296
transfer 109
transfer, fostering 240
transfer in multimedia instructional environments 237–259
transfer types 239
transfer types in multimedia learning research 246

U
universal design (UD) 229
universal design for learning (UDL) 218

V
valence, instrumentality, and expectancy (VIE) 156
video as distracter 329
video as scaffold 328
visual dynamics on split attention 89–107
visualization in education 218
visualizations, defined 68
visualizations, learning with 74
visualizations, processing 72
visualizations aid learning 75
visualizers vs. verbalizers 79
visual vs. verbal representations 70

W
Web-based learning 199
Web-based multimedia, cognitive demands 194–216
working memory capacity (WMC) 17–33
working memory capacity, a study 21
