Shivanand Balram is a postdoctoral researcher in the Spatial Analysis and Modelling Research Laboratory, Simon Fraser University, Canada. He has a PhD from McGill University, Department of Geography, with a focus on collaborative approaches to spatial analysis and decision making. His master’s degree was completed at the University of Cambridge, UK, with a focus on GIS and the spatial diffusion of contagious diseases in urban communities. His undergraduate degree was done at the University of Guyana, Department of Physics, where he worked on the design of photovoltaic power systems for sustainable urban and rural electrification. Dr. Balram has accumulated more than 12 years of academic, industry, and consulting experience in the areas of geographic information systems and science, collaborative decision making, and environmental modeling. He has published in these areas, and developed the “Collaborative Spatial Delphi Methodology” for spatial environmental planning. His research has been published in the *Journal of Geographical Systems*, *Biodiversity and Conservation*, and *Landscape and Urban Planning* journals. His other research interests include spatial statistics and problem-based learning.

Suzana Dragićević is an assistant professor in the Department of Geography, Simon Fraser University, Canada. She obtained her PhD from the University of Montreal, Department of Geography, focusing on fuzzy sets and temporal GIS. Her master’s and undergraduate degrees were obtained at the University of Belgrade and focused on geodetic engineering. She has 18 years of academic,
governmental, and industry experience in the areas of geographic information science and geomatics engineering. Her research interests include GIS, spatial data analysis, fuzzy sets and logic, modeling geographic complexity, cellular automata, collaborative spatial decision-making, Web-based GIS, and error and uncertainty analysis. These research activities are implemented through her Spatial Analysis and Modeling Research Laboratory, and with funding from the Natural Sciences and Engineering Research Council (NSERC) and the Social Science and Humanities Research Council (SSHRC) of Canada. Her research has been published in internationally reputable journals such as the International Journal of GIScience, Cartography and GIScience, Journal of Geographical Systems, International Journal of Remote Sensing, and Ecological Modelling, among others. Moreover, she has organized a special journal issue and many conference sessions to bring experts together to synthesize research and expand knowledge.

**Michael Dougherty**, PhD, is an extension specialist and associate professor with West Virginia University Extension Service (USA). He has been at WVU since 1995. He is a team leader for the State and Local Government Team and serves on the Land Use and Public Policy and Community Leadership Teams. He is also the co-course director for the Community Development Institute East. His research interests include planning and public administration.

**Gregory Elmes** is a professor of geography at West Virginia University (USA), and co-director of the West Virginia State GIS Technical Center. From 1998-2000, he was president of the University Consortium for Geographic Information Science (UCGIS), and is currently chair of the International Geographic Union Commission on Geographical Information Science. His research in geographic information science focuses on GIS and society and space-time representation, with applications in medical geography and forensics.

**Sarah Elwood** is an assistant professor in the Department of Geography and Regional Development, University of Arizona (USA). Her research examines the social and political impacts of GIS technologies, and the significance of community-based planning and local activism in shaping urban social and political geographies. She is currently working collaboratively with two Chicago community-based organizations examining the use and impacts of GIS in neighborhood planning and redevelopment, and is trying to develop strategies for sustaining GIS capacities in small nonprofit and grassroots groups.

Christopher Fletcher, AICP, is the planning director for Monongalia County, WV (USA). Mr. Fletcher has served on every front of local land-use policy development and administration as a city councilman, planning commissioner, public administrator, and consultant. As president of the West Virginia Planning Association, he was instrumental in the drafting and successful passage of legislation in 2004 that modernized the State’s Planning Enabling Law for the first time in nearly 50 years. He holds a BA in political science and business management from Muskingum College, and is pursuing an MPA at West Virginia University.

Jianhua Gong is a professor in the Institute of Remote Sensing Applications, Chinese Academy of Sciences (CAS) in GIS, Remote Sensing and virtual geographic environments. He obtained his PhD at Peking University (1995) and carried out postdoctoral research work in the State Key Laboratory of Resources and Environment Information System, Institute of Geography and Resources Research, CAS, and in the Department of Geography, The Chinese University of Hong Kong, Hong Kong (1997 to 2001). At present, he serves as deputy director of resources and environment special group, the Chinese Association of Geographic Information Systems. Dr. Gong’s research interests include geovisualization, virtual geographic environments, medical geography, and regional sustainable development. He has published more than 50 academic papers and a book titled Virtual Geographic Environments- A Geographic Perspective in Online Virtual Reality.

G. Brent Hall is a professor of planning and geography at the University of Waterloo, Canada. Dr. Hall’s interests focus on the use of open-source GIS and spatial decision support to address service-planning problems, especially in health care and education, in developing countries. His technical interests focus on spatial data representation in vector-based GIS. Dr. Hall is past winner of the Horwood Critique Prize of the Urban and Regional Information Systems Association (URISA), and has published widely in a number of international journals. His current research is funded by the Ford Foundation, the Social Science and Humanities Research Council (SSHRC) of Canada, and the GOIDE network of Centres of Excellence.

Mordechai (Muki) Haklay is a lecturer in geographical information science in the Department of Geomatic Engineering, University College London. Dr. Haklay holds a PhD in geography from UCL, an MA in geography and a BSc in computer science and geography from the Hebrew University of Jerusalem. His research interests include usability aspects of geographical information systems,
public access to environmental information, and the applications of GIS for public participation (PPGIS).

**Timothy L. Hawthorne** is a graduate student in the West Virginia University Department of Geology and Geography (USA). He is also a 2003 graduate of Ohio Wesleyan University, where he worked on a PGIS project with Delaware County (OH) officials that explored potential locations for green space and recreational trail development. His research interests include geographic information science, participatory geographic information systems, land-use and cover-change analysis, land-use planning, urban geography, and remote sensing.

**Piotr Jankowski** received his PhD in geography from the University of Washington, and his MS in econometrics and operations research from the Poznan School of Economics. He held faculty appointments in geography at the University of Idaho and in geoinformatics at Muenster University. He is currently a professor of geographic information science at San Diego State University (USA). His research areas include spatial decision support systems, spatial modeling, and participatory geographic information systems.

**Michael G. Leahy** graduated from the Master’s of Environmental Studies and Geography program in 2005 at the University of Waterloo, Canada, and is currently a PhD candidate in the geography program at Wilfred Laurier University, Canada. His recent work is focused on using spatial statistical analysis techniques for decision support in educational planning and development in the country of Peru. His current research interests lie in the use of open source technologies for online GIS applications. He is participating in a GEOIDE funded project that will seek to develop spatial decision support tools using open source software.

**Songnian Li** is an associate professor in the Department of Civil Engineering at Ryerson University, Canada. His general research interest is in spatial information management and geographic information systems (GIS), as well as their applications in such areas as transportation, environment, urban development, earth surface and under-surface modeling, and disaster management. His current research focuses on collaborative geographic visualization and 3-D GIS modeling, CSCW-based geoprocessing and geospatial workflows, and mobility and automation of geospatial services. Dr. Li is the co-chair of WG IV/5 of the International Society of Photogrammetry and Remote Sensing (ISPRS) (2004 - 2008) and associate editor of Geomatica Journal.
**Hui Lin** graduated from the Wuhan Technical University of Surveying and Mapping in 1980, received an MSc on remote sensing and cartography from The Chinese Academy of Sciences in 1983 and an MA on GIS from SUNY at Buffalo in 1987, and his PhD from SUNY at Buffalo in 1992. He joined the Geography Department of The Chinese University of Hong Kong (CUHK) in 1993. Now, Hui Lin is a professor of the Department of Geography and Resource Management of CUHK. He also serves as director of the Joint Laboratory for Geoinformation Science, The Chinese Academy of Sciences and The Chinese University of Hong Kong. Currently, he is a member of the Commission on Visualization and Virtual Environments of International Cartographic Association. Dr. Lin was the founding president of the International Association of Chinese Professionals in Geographic Information Science (CPGIS). He was elected the academician of The International Eurasian Academy of Sciences in 1995, and president of Hong Kong Society for Photogrammetry and Remote Sensing in 2001. Hui Lin’s major research interests include virtual geographic environments (VGE), cloud-prone and rainy area remote sensing (CARRS), and spatially integrated humanities. After joining CUHK, Lin Hui has published over 120 papers, one atlas, eight proceedings, and eight research books.

**Jacek Malczewski** is an associate professor of geography at the University of Western Ontario, London, Canada. He holds degrees in geography from Jagiellonian University, Cracov, Poland (MSc) and Polish Academy of Sciences, Warsaw (PhD). His research interests include multicriteria decision analysis, location theory, and geographic information sciences. He has authored a book on *GIS and Multicriteria Decision Analysis*.

**Brad C. Mason** obtained his Bachelor of Science and Master of Environment degrees from Simon Fraser University, Canada. From 1979 to 1985, he was aquatic biologist for the BC Hydro Revelstoke Dam project in Revelstoke, British Columbia. Currently, he is the senior habitat inventory biologist for the Pacific Region with the Oceans Habitat and Enhancement Branch of the Department of
Fisheries & Oceans, Canada (DFO). His work involves fish habitat inventory, information management and planning, and technical contributions to the Federal/Provincial Fisheries Information Summary System. He was also involved with developing many community-based information systems including ShoreKeepers, Sensitive Habitat Inventory and Mapping, Local Government Sensitive Habitat Atlases, and the Community Mapping Network (http://www.CMNBC.ca). Presently, his focus is on integrating multisource data to support sustainable communities planning and decision making, as well as on developing related standards to improve community based inventorying.

Brent McCusker is an assistant professor of geography at West Virginia University (USA). His research interests include the integration of geospatial technologies and political ecology, land use and cover change, and livelihoods, with a focus on South Africa. His most recent work looks at land-use change on recently redistributed farms in the Limpopo Province, South Africa.

Timothy L. Nyerges is a professor in the Department of Geography, University of Washington (USA). Over the past 15 years, Dr. Nyerges’ research has focused on collaborative GIS-enabled decision support, risk evaluation, and participatory geographic information systems and science with special application to land use, transportation, and water resource concerns about local governance in urban sustainable development. Over the past 20 years, Dr. Nyerges has been teaching undergraduate and graduate courses in GIS map design, urban environmental GIS using a decision support perspective, GIS workshop as senior capstone, and seminars in geographic information representation.

Marta Pinto is a research assistant at the Catholic University of Portugal. Her research interests include public participation, environmental education, green marketing and environmental communication, geographic information systems, and conservation. She is currently working on a project in Santo Tirso, Portugal that uses public participation techniques for understanding environmental and citizenship issues.

Kevin S. Ramsey is a PhD student in the Department of Geography, University of Washington (USA). His research focuses on critically exploring the democratic potential of new media technologies, with a particular emphasis on Internet-based participatory GIS. This work seeks to situate questions regarding how to best design participatory GIS within broader problems of democratic governance and politics. His most recent work examines the use of GIS models
in collaborative water resource planning and the perils of focusing too narrowly on the generation of shared understandings at the expense of addressing fundamental differences in problem framing.

**Claus Rinner** is an assistant professor in the Department of Geography at the University of Toronto, Canada. His research focuses on spatial decision support and geographic visualization. Before coming to Canada, he was a faculty member at the Institute for Geoinformatics, University of Münster, Germany, and a system developer for interactive Internet mapping tools. Claus holds a PhD in geography from the University of Bonn. During his doctoral research at GMD, the German National Research Center for Information Technology, he developed a concept for GIS-based discussion support in spatial planning-argumentation maps. Claus graduated in applied systems sciences from the University of Osnabrück.

**Raja Sengupta** is a jointly appointed assistant professor in the Department of Geography and School of Environment at McGill University, Canada. His research interests cover geographic information science, spatial decision support systems, agent-based modelling and water resources management. He obtained his PhD in 2000 from Southern Illinois University-Carbondale (SIUC) in geography, with specialization in geomatics. He also worked as a visiting instructor and assistant professor at The University of Iowa (1999-2000) and SIUC (2000-2003) respectively. He has published over a dozen journal articles and book chapters in GIScience and water-resources related journals since obtaining his PhD.

**Milosz Stasik** received his PhD in geography from the University of Idaho, and MS in environmental biology from the University of Silesia, Poland. He works as a product manager at the Environmental Systems Research Institute Inc. (ESRI) in Redlands, California (USA). His work focuses on Internet-based mapping and location-based services (LBS), as well as advancements in mobile, GPS, and wireless technologies in the context of GIS.

**Ming-Hsiang (Ming) Tsou** is an associate professor in the Department of Geography at San Diego State University (USA). He holds a PhD from the University of Colorado at Boulder (2001), an MA from State University of New York at Buffalo (1996), and a BS from National Taiwan University (1991). As a cartographer and GIS specialist, his research and teaching interests include Internet mapping, wireless mobile GIS, distributed GIS applications, multimedia cartography, user interface design, and software agents. He coauthored a

**Daniel Weiner** is a professor of geography and director of international programs at West Virginia University (USA). Professor Weiner received his PhD in geography from Clark University in 1986. Currently, his research is focused on GIS and society, participatory GIS, and African development.

**Matthew W. Wilson** is a PhD student in the Department of Geography, University of Washington (USA). His work as a research assistant with the Participatory GIS for Transportation project includes system design for supporting online deliberation. His broader research includes critical investigation of technologies of governance and representation, extending recent work that analyzes research trends in public participation GIScience (PPGISc) by examining how a discourse about “community” acts as a vehicle to legitimate the practice of PPGISc. His research seeks to further interrogate how PPGISc confronts “power” and constitutes particular imaginations of “the political.”
