About the Contributors

Li Weigang has a Doctor in Science degree in Computer Engineering from Institute of Aeronautic Technology (ITA). Currently he is an associate professor and coordinator of graduate program at the Department of Computer Science of the University of Brasilia. He is the vice-president of Brazilian Air Transportation Society (SBTA) and with the fellowship from the National Council for Scientific and Technological Development (CNPq). His research interests include Computation in Finance and Air Transportation.

Alexandre de Barros is a Civil Engineering by the Campinas State University (1991), Master in Transportation and Operations Research by the Technology Institute of Aeronautics ITA (1994), and Doctor in Transportation Engineering by the University of Calgary (2001). Currently he is Director of the Brazilian National Civil Aviation Agency and (Licensed) Lecturer of Transportation Engineering at the University of Calgary, and member of the Editorial Board of the Journal of Advanced Transportation. He has experience in the Transportation Engineering Field, with emphasis in airports, air transportation system planning, and intelligent air transportation systems, having participated in several internation airport projects, such as Toronto/Pearson, Montreal/Trudeau, Atlanta, New York/JFK, Seattle/Tacoma, Boston/LOGan, Leeds(UK), Hong Kong and Seoul/Incheon.

Ítalo Romani de Oliveira is Expert Engineer in Atech Tecnologias Críticas, a Brazilian Company of Systems Engineering with great specialization in air transportation and critical systems. He has experience in safety analysis of aeronautical applications, having received his PhD degree from the School of Engineering of the University of São Paulo, and participated as temporary collaborator in the Dutch National Aerospace Laboratory NLR, and in the Rolls-Royce University Technological Centre in Systems Engineering at York, UK. He participated of safety analysis projects also in the fields of radar and railway systems. He has been director member of the Brazilian Air Transportation Research Society since 2006.

Jorge Rady de Almeida Jr. is a professor in the Computing and Digital Systems Engineering Department, School of Engineering, at the University of São Paulo. He is also a coordinator of the school’s Safety Analysis Group, where he has extensively performed research in dependable and safety-critical systems applied to critical applications. He has also investigated real time issues in the Software Engineering area, especially in the database, data-warehouse and data-mining subareas. He has substantial
experience in safety analysis of urban-railway systems, database systems and air traffic systems. He received his doctorate degree in computer engineering from the School of Engineering, and is currently supervising doctorate students over the main theme of Dependability in Air Traffic Control Systems

**G.J (Bert) Bakker** received his Masters in Applied Mathematics from Twente University in 1989. Since joining NLR in 1992, his research has focussed on the area of collision risk modelling and stochastic analysis of advances in air traffic management. His results have found application in probabilistic conflict detection algorithms, in the development of the accident risk assessment methodology TOPAZ (Traffic Organization and Perturbation AnalyZer), supporting TOPAZ toolsets, and applications of TOPAZ to various air traffic operations. He has published many of these developments as co-author of over thirty peer reviewed scientific articles in journals, books and conference proceedings.

**Michael Bartholomew-Biggs** obtained his PhD from London University in 1974. He has worked as an applied computational mathematician in many aerospace applications, first in the aircraft industry and subsequently through consultancy work with the Numerical Optimization Centre which included a series of trajectory optimization projects for the European Space Agency. He has also been active in the development of algorithms for continuous optimization - particularly sequential quadratic programming methods for tackling problems with nonlinear constraints. In the last ten years or so he has been engaged on solving global optimization problems in a wide range of application areas, from engineering to finance. He is currently Reader Emeritus in Computational Mathematics at the University of Hertfordshire.

**Henk Blom** is Principal Scientist at National Aerospace Laboratory NLR in Amsterdam, The Netherlands. He received his Masters from Twente University in 1978. Subsequently he performed research in forward looking infra-red picture processing at TNO Physics Laboratory, The Hague. In 1980 he joined NLR to work on research in Air Traffic Management. In 1988 he was visiting scholar at the University of Connecticut, Storrs, USA. In 1990 he received PhD from Delft University of Technology on the thesis “Bayesian estimation for decision-directed stochastic control”. In 2004 he received NLR’s Dr.Ir. B.M. Spee Award. Dr. Blom is Fellow IEEE since 2007. Dr. Blom has over twenty five years experience in the theory of stochastic modeling and analysis and its application to signal processing, data fusion and safety risk analysis. He is the scientific leader of innovative developments such as the widely known IMM (Interacting Multiple Model) filter algorithm, Eurocontrol’s Bayesian multi-sensor multi-target tracking system ARTAS (ATM Radar Tracking And Server) and NLR’s safety risk analysis methodology TOPAZ (Traffic Organization and Perturbation AnalyZer) and supporting TOPAZ tool sets. He is author of over hundred articles in scientific journals, books and conference proceedings, and of the volume “Stochastic Hybrid Systems, Theory and Safety Critical Systems”, Springer, 2006. Currently he is coordinator of the European research project iFly, and at the same time he enjoys the fun and challenge of continuing his own research.

**Lawrence Brom**. In April 2007 Lawrence enrolled in the Strategy & Business planning Unit of the EUROCONTROL Experimental Centre where he contributed to strategic studies. He started his career in 1991 as junior consultant in ergonomics and human engineering. He passed through the banking sector from 1994 to 1997 before joining EUROCONTROL were he performed successive management responsibilities in the HR domain where he recently returned. Lawrence studied Psychology at the University of Brussels, Belgium, with a particular interest for industrial and commercial psychology.
He completed his main education with a bachelor's degree in management informatics and later with the one year management induction program of Bank Brussels Lambert now ING.

**João Batista Camargo Jr.** is an Electronic Engineer (1981) by the School of Engineering of the University of São Paulo (Poli-USP, Brazil), MSc by Poli-USP (1989), and PhD by Poli-USP (1996). Currently he is Associate Professor of the Computer and Digital Systems Engineering Department at the Polytechnic School, University of São Paulo, Brazil. As leader of the Safety Analysis Group in that department, he has been researching on reliable and safe computational system for critical applications, and advising several Master and Ph.D. alumni.

**Félix Mora-Camino** is a civil aeronautical engineer with Dr.Ing. and DSc degrees from the university of Toulouse. He was for several years, a professor of Control and Computer Science at the Royal Airforce Academy in Marrakech, Marrocco, and at the Federal University of Rio de Janeiro (titular professor of the COPPE institute) in Brazil where he has his permanent residence. He has been, for the last ten years, responsible for the Automation and Operations Research Laboratory (LARA) at the Air Transportation Department of ENAC (French Civil Aviation Institute) in Toulouse where he teaches Control theory and Operations Research. He is an associate senior researcher at LAAS (Laboratoire d'Architecture et d'Analyse des Systèmes) du CNRS (Centre National de la Recherche Scientifique) in Toulouse. Mr. Mora-Camino is the author of many communications in the fields of Aeronautics and air transportation operations.

**Victor R. R. Celestino** holds a BSc in Aeronautical Engineering and a MSc in Operations Research from Institute of Aeronautic Technology (ITA), a MBA in Corporate Strategy from Getulio Vargas Foundation (FGV), and ongoing PhD in Transports at University of Brasilia (UnB). More than 25 years experience in civil and military aviation at Brazilian and multinational organizations, such as EADS. His research interest includes Planning Strategies and Methodologies in Air Transport.

**Miguel Correia** is an Assistant Professor of the Department of Informatics, University of Lisboa Faculty of Sciences. He received a PhD in Computer Science at the University of Lisboa in 2003. Miguel Correia is a member of the LASIGE research unit and the Navigators research team. He has been involved in several international and national research projects related to intrusion tolerance and security, including the MAFTIA and CRUTIAL EC-IST projects, and the ReSIST NoE. He is currently the coordinator of University of Lisboa's degree on Informatics Engineering and an instructor at the joint Carnegie Mellon University and University of Lisboa MSc in Information Technology - Information Security. His main research interests are: intrusion tolerance, security, distributed systems, distributed algorithms.

**Antonio Márcio Ferreira Crespo** is Bachelor of Aeronautical Science by the Air Force Academy (1994) and Bachelor of Social Science at Federal University of Santa Catarina (2003), with specialization in Electronic Engineering by the Technological Institute of Aeronautics (ITA-2004). He is a Brazilian Air Force Officer working at CINDACTA I and currently a Masters student at the University of Brasilia. He has experience in the fields of sociology, with emphasis on social indicators, Electronic Engineering, with emphasis on antennas applied to military systems and Control and Air Traffic Management, acting mainly in the following areas: management of air traffic flow, electronic warfare programs and operational safety and quality assurance in air traffic services.

Luis Gustavo Zelaya Cruz is a Civil Engineer from the National Autonomous University of Honduras, where was graduated in 1983, has a MSc in Transportation Engineering (1986) and a PhD in Production Engineering (2006) from the Federal University of Rio de Janeiro, COPPE Institute, and also undergone a specialization course on Port Management from the Brazilian Merchant Marine in 2000. Currently he is Lecturer at the Federal Fluminense University, teaching in the courses of Petroleum and Gas Industry Management, Enterprise Logistics and Petroleum Logistics.

Paulo Sérgio Cugnasca is an Electronic Engineer (1987) by the School of Engineering of the University of São Paulo (Poli-USP, Brazil), MSc by Poli-USP (1993), and PhD by Poli-USP (1999). Currently he is Assistant Professor of the Computer Engineering and Digital Systems Department at Poli-USP. As member of the Safety Analysis Group in that department, he has been researching on reliable and safe computational system for critical applications, and advising several Master and Ph.D. alumni.

Adilson Marques da Cunha, DSc, is an associate professor in the Brazilian Aeronautical Institute of Technology at the Computer Science Division. He holds MSc from the United States Air Force Institute of Technology – AFIT (1983-84), and DSc from the George Washington University – GWU (1985-87). He is the coordinator of the Software Engineering Research Group (GPES) at ITA. Professor Cunha has experience in Information Systems, Software Engineering, and Artificial Intelligence. In the last 15 years, he has advised more than 30 master and doctoral degree students in the areas of computer science, and has written more than 50 different papers for international conferences, symposiums, and congresses. He also has been developing and coordinating more than 20 R&D successful projects in the ITA. As a former full colonel from the Brazilian Air Force, and a pilot, he had more than 5,000 hours in flight on 26 different types of aircrafts. He is the ITA coordinator of the on-going exchange project, called Cooperative Air Traffic Management – C-ATM, between the German Berlin Institute of Technology (TU-Berlin) and the Brazilian Aeronautics Institute of Technology – ITA (2008-2011).

Felipe M. G. França is an Associate Professor at the Systems Engineering and Computer Science Program, COPPE, Universidade Federal do Rio de Janeiro (UFRJ). He received his BEE (Electronics Engineering, 1981) and his MSc (Computer Science, 1987) from UFRJ, and his PhD (Neural Systems Engineering, 1994) from Imperial College London. His research and teaching interests includes computer architecture, computational intelligence models and all aspects of parallel and distributed computing.

Ricardo Alexandre Veiga Gimenes is a researcher in the School of Engineering at the University of São Paulo, where he is a member of Safety Analysis Group. He is also member of Brazilian Air Transport Research Society. Since 2002, he has been gathering substantial experience in safety analysis of dependable systems controlling critical applications as Air Traffic Control and Railway Systems. He received his master’s degree in Computer Engineering from School of Engineering and now, the main focus of his doctoral research is the development of a methodology to integrate Unmanned Aircraft Vehicles in non-segregated airspace under supervision of Air Traffic Control.

Kasthurirangan Gopalakrishnan is a Research Assistant Professor of Civil Engineering at Iowa State University, Ames and has over 10 years of experience in transportation infrastructure systems. Dr. Gopalakrishnan received his PhD in Civil Engineering from the University of Illinois at Urbana-Champaign and a Masters from Louisiana State University at Baton Rouge. Dr. Gopalakrishnan is also a
About the Contributors

recipient of *Dwight D. Eisenhower Transportation Research Fellowship* which gave him the opportunity to work at the Turner-Fairbanks Highway Research Centre (TFHRC), Washington DC on a research project entitled “Simulation, Imaging, and Mechanics of Asphalt Pavements”. His current research interests include soft computing applications in pavement analysis, mechanistic-empirical pavement design concepts, image analysis, and non-destructive evaluation of pavements and he has published over 50 peer-reviewed journal articles in these areas.

**Roman Gumzej**, born 1970 in Maribor, Slovenia, received a doctorate in computer science and informatics from University of Maribor in 1999. He worked both in industry (Institute of Information Science, IZUM Maribor) and academia (University of Maribor), before he was elected assistant professor at the Faculty of electrical engineering and computer science at University of Maribor in 2004. He was a visiting researcher at ifak e.V. Magdeburg, Germany in 2002 and at the Chair of Computer Engineering at Fernuniversität in Hagen, Germany in 2007. Currently he is assistant professor at the Faculty of logistics at the same university. His research interests comprise all major areas of hard real-time computing with special emphasis on operating systems, co-design and quality-of-service. He has conducted a national and co-operated in several national and international research projects. He has authored or co-authored several refereed book chapters, and about 40 journal publications and conference contributions, and is involved in various professional organisations and programme committees of several conferences.

**Wolfgang A. Halang**, born 1951 in Essen, Germany, received a doctorate in mathematics from Ruhr-Universität Bochum in 1976, and a second one in computer science from Universität Dortmund in 1980. He worked both in industry (Coca-Cola GmbH and Bayer AG) and academia (University of Petroleum and Minerals, Saudi Arabia, and University of Illinois at Urbana-Champaign), before he was appointed to the Chair of Applications-Oriented Computing Science and head of the Department of Computing Science at the University of Groningen in the Netherlands. Since 1992 he holds the Chair of Computer Engineering in the Faculty of Electrical and Computer Engineering at Fernuniversität in Hagen, Germany, whose dean he was from 2002 to 2006. He was a visiting professor at the University of Maribor, Slovenia, 1997, and the University of Rome II in 1999. His research interests comprise all major areas of hard real-time computing with special emphasis on safety-related systems. He is the founder and was European editor-in-chief of the journal Real-Time Systems, member of the editorial boards of 4 further journals, co-director of the 1992 NATO Advanced Study Institute on Real-Time Computing, has authored 12 books and some 350 refereed book chapters, journal publications and conference contributions, has edited 16 books, holds 12 patents, has given some 80 guest lectures in more than 20 countries, and is active in various professional organisations and technical committees as well as involved in the programme committees of some 180 conferences. In the International Federation of Automatic Control he chaired the Technical Committee on Real-Time Software Engineering before he became member of the Technical Board in 2002 chairing the Co-ordinating Committee on Computers, Cognition and Communication for Control until 2008.

**H.W. Ho** is a Research Associate at the Department of Civil & Structural Engineering of The Hong Kong Polytechnic University. He received his B.Eng. and Ph.D. degrees from the University of Hong Kong. His research interests includes congestion pricing studies, land-use and transport modeling, macroscopic facility choice studies, and continuum modeling approach for traffic equilibrium problems.
**About the Contributors**

**Matthew G. Karlaftis** is an associate professor in the department of transportation planning and engineering at the National Technical University of Athens, in Greece. He holds a bachelor’s and a master’s degree in civil engineering from the University of Miami and a Ph.D. from Purdue University. His interests include public transport operations, transit economics, and transportation data analysis.

**Becky P.Y. Loo** is Associate Dean of the Faculty of Social Sciences and an Associate Professor of the Department of Geography at the University of Hong Kong. Her research interests are transportation, spatial analysis, and economic geography. Her research uses surveys, quantitative techniques and spatial modelling to analyze transport and development phenomena. She published very high-quality and substantial articles in top-ranking internationally-refereed journals. In recognition of her research achievements, she was awarded the Outstanding Young Researcher 2006. Becky Loo is on the Editorial Board of ten academic journals, including the *International Journal of Sustainable Transportation*, *NETCOM, Transportation and Transportmetrica*. Moreover, she was invited to serve as a reviewer for important grant councils and for 18 different academic journals in geography and transportation. From 2005 to 2009, she was the chairperson of the Hong Kong Section of the International Geographical Union.

**Denis Silva Loubach** received the BS degree in Computer Engineering from the University of Mogi das Cruzes – UMC, Sao Paulo, Brazil, in 2004; and the MSc degree in Electronics and Computer Engineering, Computer Science area, from the Aeronautics Institute of Technology – ITA, Sao Jose dos Campos, Sao Paulo, Brazil in 2007. Currently, he is a PhD student at ITA in the computer science area, working mainly with real-time systems, embedded systems, scheduling, fault tolerance, and microcontrollers. He also integrates the Software Engineering Research Group – GPES at ITA. Its main projects in Brazil have been the Student Satellite from 2005-07, the Unmanned Aerial Vehicle from 2006-08, and the On-Board Data Handling Computer since 2008. He is an IEEE student member.

**Osvandre Alves Martins** is a Brazilian computer science researcher and professional who started his career in 1989 after finishing a technician course about data processing. He received the BS degree in Computer Science from the Faculty of Informatics of Presidente Prudente (Brazil) in 1994 and Information Systems Specialist title in 1997 from Federal University of São Carlos. In 2003 he received the MS degree from the Brazilian Aeronautics Institute of Technology (ITA) and his studies and works comprised software systems interoperability for project management. His professional experience includes information technology management and software engineering in some companies in Brazil, and Research & Development activities considering software engineering, software development process and support tools, mainly performed in projects that involve the ITA and public and private companies, since 2001. He is now a doctoral student and member of the Software Engineering Research Group (GPES) at ITA.

**Giovani Volnei Meinerz** is a Computer Science doctorate student at the Brazilian Aeronautics Institute of Technology (ITA), advised by Professor Dr. Adilson Marques da Cunha. He integrates the Software Engineering Research Group (GPES) at ITA. He has experience in Computer Science, focusing on Software Engineering, acting mainly on the following topics: integrated development environment and software development process, applied on research and development projects since 2002. Currently, he is a researcher in the on-going exchange project between the German Berlin Institute of Technology
About the Contributors

(TU-Berlin) and ITA which aims to investigate and propose the main requirements and recommendations for future cooperative ATM concepts, using collaborative technologies and procedures to enhance process efficiency.

Henrique Moniz is a Ph.D. student at the Department of Informatics, University of Lisbon. He is a member of the LASIGE laboratory and the Navigators research group. He is also a teaching assistant at the University of Lisbon. His research interests are concerned with distributed algorithms in hostile environments. He is involved in several research projects related to intrusion tolerance and security, including the RITAS (FCT), the CRUTIAL and HIDENETS (EC-IST) projects, and the ReSIST NoE.

Nuno Ferreira Neves is an assistant professor of the Department of Informatics, University of Lisboa, and also an adjunct faculty at the Information Network Institute, Carnegie Mellon University, for activities related to the MSc in Information Technology - Information Security. He received a Ph.D in Computer Science from the University of Illinois at Urbana-Champaign (1998). His main research interests are in dependable and secure parallel and distributed systems, and in the recent years, he has participated in several European and National research projects in this area, namely CRUTIAL, Resist, AJECT, RITAS and MAFTIA. His work has been recognized with the IBM Scientific Prize in 2004 and the William C. Carter award at the IEEE FTCS in 1998. Currently, he is member of the editorial board of the International Journal of Critical Computer-Based Systems.

Stephen Parkhurst obtained his PhD at the University of Hertfordshire based on research into the application of nonlinear optimization to problems of reservoir management in the oil and gas industry. Subsequently he worked with the Numerical Optimization Centre on the development of trajectory optimization software (in both Fortran and Ada) for the European Space Operations Centre in Darmstadt. He then joined the Mathematics department at the University of Hertfordshire, taking particular responsibility for teaching mathematics to engineers and to other non-specialist students, while retaining a research interest in conjugate-gradient methods for optimization. He has now left the university sector to pursue a career as a school mathematics teacher.

Nadine Pilon. Responsible for Strategic studies in the Strategy unit at the European Organization for the Safety of Air Navigation, Dr Nadine Pilon joined EUROCONTROL in 1994 where she initiated and managed the Safety Research Area at the Experimental Centre. She then set-up Society research as Deputy Manager of the Society-Environment-Economy Research Area. She holds a PhD in modeling sciences at Paris VI University and several years in software and system engineering in European industry. She is now also responsible for the Influence modeling in the context of the Performance Framework of the European project EP3, a contributor to SESAR.

Walter N. Pizzo currently works as Defense Systems Manager at Atech – Tecnologias Críticas (www.atech.br), with activities in defense programs management and proposals coordination related to critical systems engineering for the Brazilian MOD and military organizations. His experience includes contract management, specifications and design of air defense systems. Recent projects include simulation systems for military air operations training, airborne mission systems, command and control systems, air to ground datalink solutions and reliability assessment studies of critical systems. He holds a Bachelor’s Degree in Electronics Engineering from the Polytechnic School of the University of Sao Paulo (1984),
specialization in Education at Sao Paulo Catholic University (2000) and a Masters of Science Degree in Electrical Engineering by Polytechnic School of the University of Sao Paulo (2008).

José Lourenço da Saúde graduated in 1985 from the State University of Coimbra (Portugal) as Chartered Mechanical Engineer. In 1986 finalised his MSc at the von Karman Institute for Fluid Dynamics, Belgium. In 1981 made a post graduation course in the management of aeronautical programmes (Airbus Industries, Cranfield University and Pisa University). Joined the Portuguese Air Force in 1987, being assigned for almost 15 years to the aeronautical industry where he held various senior positions, ranging from maintenance, production and project engineering to logistics. In 2007 received is PhD in Aeronautics Sciences, being invited at the State university of Beira Interior in Portugal (www.ubi.pt) to be Assistant Professor in the domain of aircraft Manufacturing and Maintenance. He is member of the Portuguese Society of Professional Engineers.

Eno Siewerdt was born in the city of Jaragua do Sul, Brazil, 1952, started his professional career as an Air Navigation Instructor with the Brazilian Air Force and Air Traffic Controller. Chief Air Traffic Controllers’ Training Officer, and Head of Air Traffic Management R&D in Brazil from 1980 to 1998. Member, Brazilian CNS/ATM (Communications, Navigation, Surveillance/Air Traffic Management) Commission. Advisor on the Future Air Navigation System Special Committee, Member of the Obstacle Clearance Panel (OCP), Air Traffic Management Operational Concept Panel (ATMCP), and the Human Resource Planning and Training Study Group (HRPTSG), of the International Civil Aviation Organization (ICAO). Air Navigation Expert and international coordinator of technical cooperation projects. Instructor at the Brazilian Civil Aviation Institute, and guest lecturer at several major Universities, focusing on Navigation, Traffic Management and Air Transport subjects. Currently, Air Navigation and Traffic Management Consultant with ATECH and the Polytechnical School of the University of São Paulo.

Giacomo F. Staniscia currently works as Defense Systems Director at Atech – Tecnologias Críticas (www.atech.br) and as Director of Innovation at the same company. Develop activities in national defense programs for the Brazilian government and military organizations. His experience includes contract management, specifications and design of aerospace, air defense systems and air traffic systems. Worked as technical manager on Brazilian Amazon surveillance system (SIVAM), recent projects include simulation systems for military air operations training, airborne mission systems, command and control systems, air to ground datalink solutions and reliability assessment studies of critical systems. Mr. Giacomo holds a Bachelor’s Degree in Electronics Engineering from Federal University of Parana (UFPR) and post-graduation in electronics systems from University of Sao Paulo.
About the Contributors

Alessandra Tedeschi is an employee at Deep Blue Srl. She has a PhD in Applied Mathematics from the University of L'Aquila and Rome La Sapienza. Her research interests are agent based models and game theory applied to the optimization and control of complex and safety critical systems.

Antonio Pedro Timoszczuk received a BS degree in Electronic Engineering in 1984 from Industrial Engineering Faculty - FEI-SBC, received MSc and PhD degrees in Electronic Systems in 1998 and 2004 respectively, from Politechnic School University of Sao Paulo. He has experience as university researcher and worked on industry in R&D Projects involving military systems, air traffic control, telecommunications and location based services. On faculty his research interests concentrate on intelligent systems and artificial neural networks applications. Currently he works as a R&D and Innovation Coordinator at Atech and as a collaborate researcher at Sao Paulo University where he develops advanced research on biologically plausible neural networks. Dr. Timoszczuk is a member of IEEE Society, Brazilian Society for Science Progress-SBPC and Brazilian Computer Society.

Lúcio F. Vismari has Diploma (2001) and Masters Degree (2007) in Electrical Engineering, with emphasis on Telecommunications and Digital Systems, respectively, both by the School of Engineering at the University of Sao Paulo (USP), Brazil. In 2008, he began the studies to receive his Doctor of Engineering degree at same university. After receiving his degree in Electrical Engineering in 2001, he joined to the Safety Analysis Group (GAS) of Escola Politécnica at USP (GAS/EPUSP), doing researching on themes related to the area of computer-based dependable systems (mainly the aspects of Reliability, Availability and Safety), with specific focus on risk assessment methodologies applied to transportation systems. Concomitant with his research, he acts as a system safety analyst in computer-based dependable systems projects, as railway signaling and control systems, air traffic control systems, defense equipments and others.

Simon Wilson currently works as a Researcher and Software Engineer in the fields of Traffic Modelling and Applications for a research establishment in the UK. He gained his PhD in 2003 from the University of Hertfordshire carrying out research into the application of Global Optimization algorithms to solving Aircraft Routing problems. The research programme was funded by BAE SYSTEMS whom he worked for as a Software Engineer prior to starting his PhD.

S.C. Wong is a Professor at the Department of Civil Engineering and Director of the Institute of Transport Studies of the University of Hong Kong. He received his B.Sc.(Eng.) and M.Phil. degrees from the University of Hong Kong, and Ph.D. degree in Transport Studies from University College London. His research interests include the optimization of traffic signal settings, continuum modeling for traffic equilibrium problems, traffic flow theory, traffic management and control, transportation planning and network modeling, and road safety. He is currently Editor-in-Chief of International Journal of Sustainable Transportation, and Transportmetrica; Associate Editor of IEEE Transactions on Intelligent Transportation Systems, and Journal of Advanced Transportation; and Editorial Board Member of Transportation Research Part B, Transport Reviews, ASCE Journal of Urban Planning and Development, Journal of Intelligent Transportation Systems, Journal of Transportation Systems Engineering and Information Technology, International Journal of Shipping and Transport Logistics, etc.
Dave Young. Head of Strategy and Stakeholder Relations Management at the European Organization for the Safety of Air Navigation, Mr. Dave Young has been a member of EUROCONTROL since 1980. Early in his career he led many HMI research and operational validation activities, which were instrumental in the introduction of windowing techniques and colour for today’s Air Traffic Control. Later, he led a pioneering application of distributed technology for Air Traffic Management, managing the introduction of open system architectures and technologies, including the development of very large scale CORBA based air traffic management simulation facilities. More recently, together with the European Commission and the ATM supply industry, he was a key actor in the developments leading to the establishment of the European ATM Master Plan and SESAR.

Peng Zhang is a Professor at the Shanghai Institute of Applied Mathematics and Mechanics, Shanghai University, Shanghai, China. He received his B.Sc. degree from Sichuan University, Sichuan, China, and M.Sc. and Ph.D. degrees from the University of Science and Technology of China, Hefei, China. His research interests include traffic flow theory and computational methods.
