About the Authors

M. Adam Mahmood is Professor of Computer Information Systems in the Department of Information and Decision Sciences. He also holds the Ellis and Susan Mayfield Professorship in the College of Business Administration at the University of Texas at El Paso. Dr. Mahmood’s research interests center on the utilization of information technology including electronic commerce for managerial decision making and strategic and competitive advantage, group decision support systems, and information systems success as it relates to end user satisfaction and usage. On these topics and others, he has published two scholarly books and over 75 technical research papers in some of the leading journals and conference proceedings in the information technology area including Management Information Systems Quarterly, Decision Sciences, Journal of Management Information Systems, European Journal of Information Systems, INFOR — Canadian Journal of Operation Research and Information Processing, Information and Management, and Journal of End User Computing, among others. Dr. Mahmood’s scholarly and service experience includes a number of responsibilities. He is presently serving as the Editor in Charge of the Journal of End User Computing. He has recently served as Guest Editor of the Journal of Management Information Systems. He has also served two one-year terms as President of the Information Resources Management Association. In 1997 former Governor Bush appointed him to a Texas State Board. In 1998, he has been recognized by American Men & Women of Science “as being among the most distinguished scientists in the United States and Canada.” In 2000 the International Biographical Centre of Cambridge, England named him as one of the 2000 Outstanding Scientists of the 20th Century. In 2001 Governor Perry appointed him to the State Board that oversees the Texas Department of Information Resources.

David Allen is an Associate Professor of Management at Northern Michigan University, Marquette, Michigan, where he teaches in the quantitative area. His research has focused on risk analysis and cost benefit analysis, total quality management, productivity in service systems and statistical regression estimators.

Tom Butler is a senior researcher at the Executive Systems Research Centre and a College Lecturer at University College Cork. His research interests include the information systems development process, CASE, user participation, organizational change around IT, and the implications of IT for the competence and knowledge-based theories in firms. He is also interested in the application of constructivist philosophy for research on information research.

James D. Campbell is Associate Professor in the Department of Family and Community Medicine at the University of Missouri-Columbia. Trained as a medical sociologist, his research interests are in doctor/patient communication, death and dying, prenatal care,
coordination between primary and tertiary care, and collaborative practice between nurse practitioners and family practice physicians. He is currently the editor of the *Annals of Behavioral Science and Medical Education*.

**Stephen L. Chan** is an Associate Professor in the Computer Science Department at Hong Kong Baptist University, Kowloon, Hong Kong. He received his Doctor of Science from Washington University, St. Louis. Prior to joining the Hong Kong Baptist University, he worked for McDonnell Douglas (now Boeing) for 13 years, primarily in the Operations Analysis Department of the McDonnell Aircraft. His research interest related to information systems development, business process reengineering, technology management, and scheduling expert systems. Among different consultancy projects, he has been involved in medical informatics for some years.

**Carol Clark** is an Associate Professor of Computer Information Systems at Middle Tennessee State University in Murfreesboro, TN. She holds a Ph.D. from Northwestern University. She is the immediate Past President of the Midwest Business Administration Association and a former President of the Society for the Advancement of Information Systems. Her work has appeared in various journals including *Information Strategy: The Executive’s Journal* and *Internal Auditing*.

**Steve Clarke** received a BSc in Economics from the University of Kingston Upon Hull, an MBA from the Putteridge Bury Management Centre, The University of Luton, and a PhD in human-centered approach to information systems development from Brunnel University—all in the United Kingdom. He is Principal Lecturer in Systems and Information Management at the University of Luton. His research interests include: social theory and information systems practice; strategic planning for information systems, and the impact of user involvement in information systems development. Major current research is focused on approaches to information systems strategy informed by critical social theory.

**Timothy Paul Cronan** is Professor of Computer Information and Quantitative Analysis at the University of Arkansas, Fayetteville. Dr. Cronan received the D.B.A. from Louisiana Tech University and is an active member of the Decision Sciences Institute and The Association for Computing Machinery. He has served as Regional Vice President and on the Board of Directors of the Decision Sciences Institute and as President of the Southwest Region of the Institute. In addition, he served as Associate Editor for *MIS Quarterly*. His research interests include local area networks, downsizing, expert systems, performance analysis and effectiveness, and end-user computing. Publications have appeared in *Decision Sciences, MIS Quarterly, OMEGA, The International Journal of Management Science, The Journal of Management Information Systems, Communications of the ACM, Journal of End User Computing, Database, Journal of Research on Computing in Education, Journal of Financial Research*, as well as in other journals and proceedings of various conferences.

**Martin D. (Marty) Crossland** is Associate Professor of Management Science and Information Systems in the College of Business Administration at Oklahoma State University (Tulsa). He holds a B.S. in Geology from Texas Tech University, an M.B.A. from Oklahoma City University, and a Ph.D. in MIS from Indiana University. He has research interests in Telecommunications, Networking, and Geographic Information Systems. He has previously published work in *MIS Quarterly, Decision Support Systems, Small Group Research,*
Technology Studies, and Journal of End User Computing, plus numerous national and international conference proceedings.

**Joe Donaldson** is Associate Professor in the Department of Educational Leadership and Policy analysis at the University of Missouri-Columbia. His research interests are in the areas of education for the professions, organization and leadership in university continuing education, interorganizational collaboration and the returning adult student in higher education. He is coauthor of Collaborative Program Planning: Principles, Practices and Strategies and has had several articles published recently on the topics of returning adult students and problem-based learning.

**B. Elango** is an Assistant Professor of Management in the College of Business at Illinois State University. He received his Ph.D. from Baruch College – City University of New York. His research and consulting interests lie in the interface of strategy with technology-innovation management, entrepreneurship and international business. He has presented papers at numerous conferences and his work has appeared in many journals.

**Brian Fitzgerald** is a Senior Researcher at the Executive Systems Research Centre at University College Cork and is currently an associate editor for the Information Systems Journal. He is actively involved in applied research projects in the areas of systems development approaches, foundations of the IS field and executive information systems. His work in these areas is published in various books and international journals, including Information Systems Journal, INFOR, Journal of Information Technology, and the International Journal of Information Management.

**Kimberly D. Harris** is Assistant Professor in the Department of health Management Systems at Duquesne University. Her research interests lie in the development of health information technology and electronic medical records in rural, underserved areas, distance education and situational implementation of various types of medical technology.

**R. Wayne Headrick** is Director of the Master of Business Administration Program and Professor of Business Computer Systems in the College of Business Administration and Economics at New Mexico State University. He has published in a variety of leading IS/IT journals, and conducts research in systems development techniques, the Internet as a teaching tool, and software complexity metrics. He has over 30 years of information technology experience as a programmer, systems development manager, computing services center manager, consultant, and educator.

**Richard T. Herschel** is Associate Professor of Management and Information Systems in the Ervian K. Haub School of Business at St. Joseph’s University in Philadelphia, PA. He holds a M.A.S. in Business Management from The Johns Hopkins University, a B.A. in Journalism and Geography from Ohio Wesleyan University, and a Ph.D. in MIS from Indiana University. He is the coauthor of the text Organizational Communication: Empowerment in a Technological Society published by Houghton Mifflin. His research focuses in the areas of organizational communication and knowledge management.

**I. M. Jawahar** is an Associate Professor of Management in the College of Business at Illinois State University. He received his Ph.D from Oklahoma State University. Jawahar has
published numerous articles in journals including *Personal Psychology, Journal of Applied Psychology, Academy of Management Review*, and *Journal of End User Computing*. In 1997 he was awarded The Dale Yoder and Herb Heneman Research Award (SHRM Research Award) for his research in the area of performance appraisal. His areas of research include performance appraisal, organizational justice, social issues in management, and behavioral aspects of technology management.

**Sharon Kerkham** has been involved with many fields from fashion designer to health informatics and IT in education. After graduating from the London College of Fashion and a successful career in fashion, IT became an ever more important part of the fashion business. This led her to further study and research at Salford University, UK, where she investigated the use of information systems in hospitals. She is currently a consultant for IT training and support for schools in the UK and she is particularly interested in how children perceive and use IT.

**Louis A. Le Blanc** is a professor of business administration at the Campbell School of Business at Berry College in Mount Berry, GA. He received the Ph.D. from Texas A&M University, followed by postdoctoral study at the University of Minnesota and Indiana University. His recent publications have appeared in the *MIS Quarterly, Decision Sciences, Journal of End User Computing, European Journal of Operational Research* and *Group Decision and Negotiation*. Dr. Le Blanc teaches courses in the management of information technology, decision support systems and operations management.

**Brian Lehaney** received his MSc in Operational Research from the London School of Economics. He has subsequently specialized in simulation and soft systems methodology, which are his current research interests. He is a Principal Research Fellow in Systems and Operations Management at the University of Luton.

**Nathalie Mitev** is currently a visiting professor at Aarhus Business School in Denmark, on a special leave from the London School of Economics, UK; she has been a university lecturer in the UK at City University, Salford University, and the London School of Economics for the last 15 years. She holds several French and English postgraduate degrees including an MBA and a PhD. Her research interests concentrate on information systems and organizational change. She has studied implementation issues in small business, the health sector, the construction industry and the travel business. She has published in *Information Technology and People, The International Journal of Electronic Commerce, Journal of Information Technology, Personnel Review, European Journal of Information Systems, Journal of End-User Computing, Journal of Internet Research, European Conference on Information Systems* and *International Conference in Information Systems*. 
George W. Morgan is a Professor of Computer Information Systems in the College of Business Administration at Southwest Texas State University. His primary research interests are systems analysis, design and development with an emphasis on software performance improvement, and curriculum development. Prior to entering academia, he was a cost accountant and data processing manager in the manufacturing industry, a public school district financial officer, and a systems engineer in the computer industry.

W. Scott Murray is a graduate student in the Psychology Department at the University of Arkansas at Little Rock. His professional interests are in statistics, research methods, and counseling psychology.

Lorne Olfman is Professor of Information Science at Claremont Graduate University and Chair of the Information Science Department. He has been doing research on end-user training for more than a decade, and is currently working on a research grant on this topic for the Advanced Practices Council of the society for Information Management. Lorne’s research interests also include organizational memory systems and human-computer interaction. Lorne is proud to have chaired the dissertation of his co-author.

Claudia Orr is professor of Information Systems in Northern Michigan University, Marquette, Michigan, where she teaches communications, computer applications courses and help desk courses. Her current research focuses on instructional technology, computer skill levels among students and employees and teaching to the Net Generation.

Sandra Poindexter is a Professor of Computer Information Systems at Northern Michigan University, Marquette, Michigan, where she teaches programming and systems analysis and design courses. Her research interests include Internet usage in education, instructional technology and globalization.

Athanasia (Nancy) Pouloudi is a lecturer in the Department of Information Systems and Computing at Brunel University. She has a Ph.D. in “Stakeholder Analysis for Interorganizational Systems in Healthcare” from the London School of Economics and Political Science, an MSc in “Analysis, Design and Management of Information Systems” from the same university, and a First Degree in Informatics from the Athens University of Economics and Business. Her current research interests encompass organizational and social issues in information systems implementation, stakeholder analysis, electronic commerce and knowledge management. She has more than 20 papers in academic journals and international conferences in these areas. She is a member of the ACM, the Association for
Information Systems (AIS), the UK AIS, and the UK OR Society.

**Conway T. Rucks** is an associate professor of marketing and chair of the Marketing Department at the University of Arkansas at Little Rock. He earned his DBA from Louisiana Tech University. His recent publications have appeared in *Decision Sciences, Accident Analysis and Prevention*, the *European Journal of Operational Research* and *Expert Systems with Applications*. Dr. Rucks teaches courses in marketing research, consumer behavior and marketing management.

**Joseph Scudder** is Associate Professor of Organizational/Corporate Communication at Northern Illinois University, and earned his M.S. and Ph.D. from Indiana University. His research has examined collaborative technology, communication and technology, and influence strategies, and now is particularly focused upon models of influence that apply to mediated contexts – particularly the Internet. He is currently a co-director of the telematics project that uses technology to overcome the limitations of distance.

**Conrad Shayo** has worked over the past sixteen years in various capacities as a university professor, consultant, and manager. He holds a Doctor of Philosophy Degree and a Master of Science Degree in Information Science from the Claremont Graduate University, formerly Claremont Graduate School. He also holds an MBA in Management Science from the University of Nairobi, Kenya; and a Bachelor of Commerce Degree in Finance from the University of Dar-ES-Salaam, Tanzania. Dr. Shayo’s research interests are in the areas of IT assimilation, end-user computing, organizational memory, information strategy, and virtual societies. Currently, Dr. Shayo is an Associate Professor of Information and Decision Sciences at California State University, San Bernardino.

**D. Sandy Staples**, Ph.D., is an Assistant Professor in the School of Business at Queen’s University, Kingston, Canada. His research interests include the enabling role of information systems for virtual work and knowledge management, and assessing the effectiveness of information systems and IS practices. Sandy has published articles in various journals including *Organization Science, Journal of Strategic Information Systems, Journal of Management Information Systems, International Journal of Management Reviews, Business Quarterly, Journal of End-User Computing*, and *OMEGA*, and he currently serves on the Editorial Advisory Board of the Journal of End User Computing.

**Gary L. Sullivan** is Professor of Marketing and holder of the Betty M. MacGuire Endowed Professorship in Business Administration at the University of Texas, El Paso. He currently serves as Chair of Marketing and Management. Dr. Sullivan received his Ph.D. in Marketing from the University of Florida. Sullivan’s principal research interests are consumer decision making and advertising effectiveness. He has published in a variety of journals in business and the social sciences including *Psychology & Marketing, Journal of the Academy of Marketing Science, Expert Systems with Applications, Journal of Travel Research, Sex Roles* and the *Journal of Mental Imagery*. Sullivan has presented research at the Association for Consumer Research, the American Marketing Association, the American Academy of Advertising, and other groups.
Ray-Lin Tung received his M.B.A. from the University of Texas at El Paso. He is currently working as a software engineer in Taiwan.

Edgar Whitley is a Senior Lecturer in Information Systems at the London School of Economics and Political Science. He has a BSc (Econ) in Computing and a PhD in Information Systems, both from the LSE. He has taught undergraduate, postgraduate students and managers in the UK and abroad. Edgar was one of the organisers of the First European Conference on Information Systems and is actively involved in the coordination of future ECIS conferences. He has published widely on various information systems issues and is currently editing a special issue of The Information Society on Time and Information Technology. He is one of the programme chairs for the forthcoming IFIP 8.2 conference on organisational discourse and information technology to be held in Barcelona in December 2002.
