About the Contributors

Steve Clarke received a BSc in economics from the University of Kingston Upon Hull, an MBA from the Putteridge Bury Management Centre, The University of Luton, and a PhD in human centered approaches to information systems development from Brunel University, all in the United Kingdom. He is professor of information systems in The University of Hull Business School. Clarke has extensive experience in management systems and information systems consultancy and research, focusing primarily on the identification and satisfaction of user needs and issues connected with knowledge management. His research interests include: social theory and information systems practice; strategic planning; and the impact of user involvement in the development of management systems. Major current research is focused on approaches informed by critical social theory.

* * *

Hege-René Hansen Åsand (heas@statoil.com) is a system analyst at Statoil ASA, Global Business Services in the Collaboration Competence Centre in Hammerfest, Norway. She received an MS in information science from the University of Bergen, Norway. Her thesis was on teachers’ facilitator role when ICT is introduced in the classroom. Her general interests are computer-supported workplace learning, human-computer interaction, and information management. Her specific interests include computer-supported collaborative work and learning, end-user development, super users, and end-user tailoring. Currently, she is working towards a PhD on super users’ dual role as end-user developers and knowledge activators at InterMedia, University of Oslo.

Reza Barkhi is an associate professor and faculty research fellow of information systems in the Department of Accounting and Information Systems, Pamplin College of Business, at Virginia Polytechnic Institute and State University. His current research interests are in the areas of collaborative technologies and problem solving, and topological design of telecommunication networks. Dr. Barkhi has published in journals such as Location Science, European Journal of Operational Research, Computers & OR, Group Decision and Negotiation, Decision Support Systems, and Journal of Management Information Systems. He received a BS in computer information systems, and an MBA, MA, and PhD in business focusing on information systems all from Ohio State University.

Katherine Boswell is an assistant professor at Middle Tennessee State University. She received her PhD in business administration in the area of management information systems from the University of Mississippi. Her minor areas of study were marketing and production operations management. She
received her bachelor’s in accounting in 1990, and her master’s degree in business administration in 1991 from Mississippi State University. Katherine has publications in the areas of system development/strategy and in appropriate use policies. Her current research interests lie in the following areas: e-commerce, security, and privacy.

Yury Bychkov has received a Bachelor of Science (Honors, with distinction) in computer science from the University of Victoria in 1999 and a Master of Science in computer science at the University of Victoria, Canada in 2004 for the thesis entitled “Transformation-based Approach to Resolving Data Heterogeneity,” which proposed a novel method of specifying the translation between heterogeneous XML document types. His other research interests include medical informatics, context-aware systems, intelligent systems, and management of uncertain knowledge. He is currently working as IT analyst at LGL Limited in Sidney, Canada.

Deborah Compeau is an associate professor of management information systems in the Richard Ivey School of Business Administration at the University of Western Ontario. Her research focuses on the individual user of information and communications technologies, viewed from a social cognitive perspective. In particular, she is interested in understanding what organizations can do to facilitate individual adoption of and learning about information technologies. Her research has been published in Information Systems Research and MIS Quarterly as well as other journals. Dr. Compeau has served as a member of the editorial boards of MIS Quarterly and Information Systems Research.

Maria Francesca Costabile is full professor at the Computer Science Department of the University of Bari, Italy, where she teaches courses for the computer science curriculum. She is currently the coordinator of computer science curricula at the University of Bari. She has been visiting scientist in several foreign universities in the USA and Germany. Her current research interests are in both theoretical and application oriented aspects of visual formalisms for information representation and querying, adaptive interfaces, user models, multimodal and multimedia interaction, Web interfaces, and system usability. She has published over 150 papers in scientific journals, books, and proceedings of international conferences on the above topics, and edited seven books. Professor Costabile is regularly in the program committees of international conferences and workshops; she has been program co-chair of INTERACT 2005 and is program co-chair of CHI 2008. She is on the steering committee of the AVI Conferences, that are organized in cooperation of ACM SIGCHI. She is senior member of IEEE and member of ACM and ACM SIGCHI. She was founding member of the Italian Chapter of ACM SIGCHI (SIGCHI Italy) and served as chair from 1996 to 2000.

Timothy Paul Cronan is professor and MD Matthews chair in information systems at the University of Arkansas, Fayetteville. Dr. Cronan received the DBA from Louisiana Tech University and is an active member of the Decision Sciences Institute and The Association for Computing Machinery. He has served as regional vice president and on the board of directors of the Decision Sciences Institute and as president of the Southwest Region of the Institute. In addition, he has served as associate editor for MIS Quarterly. His research interests include information systems ethical behavior, piracy and privacy, work groups, change management, data warehouse development, performance analysis and effectiveness, and end-user computing. Publications have appeared in MIS Quarterly, Decision Sciences, Journal of Business Ethics, Information and Management, OMEGA The International Journal of Management
About the Contributors

David Dahlem is a Master of Science student in the Department of Computer Science at the University of Victoria, Canada. His thesis topic involves using pragmatics as a means for extracting context information from human to human conversations for use within context-aware systems. His other research interests include XML Web services, software security, data integration, and mobile device software development. He received a Bachelor of Arts in history from the University of Victoria in 1995. His Web site can be accessed at http://software-engineering.ca/Members/ddahlem.

David E. Douglas holds the rank of university professor in the Information Systems Department, Sam M. Walton College of Business, at the University of Arkansas. Dr. Douglas received his PhD in industrial engineering at the University of Arkansas. He teaches in a wide variety of information systems areas including programming, systems development, database management systems, enterprise systems, and business intelligence/knowledge management. Dr. Douglas is an active member in the Decision Sciences Institute, the Federation of Business Disciplines (FBD), and the Global Information Technology Management Association. He serves on the editorial board of several academic publications including the Journal of Computer Information Systems. Publications have appeared in various journals including Communications of the ACM, The Journal of Computer Information Systems, The Journal of Management Information Systems, as well as international, national, and regional proceedings of various conferences.

Judy Drennan, PhD, is a senior lecturer in the School of Advertising, Marketing and Public Relations at the Queensland University of Technology. Her qualifications include a PhD from Deakin University focusing on information technology networks and small business, and a Master of Education from the University of Melbourne. Dr Drennan's research specialization is in electronic marketing, and she has published her work in the Journal of Marketing Management, Journal of Macromarketing, Journal of Services Marketing, and Journal of Organizational and End User Computing.

Daniela Fogli received the Laurea degree in computer science from the University of Bologna, Italy, in 1994 and PhD in information engineering from the University of Brescia, Italy, in 1998. From 1998 to 2000, she was a post-doc grant holder at the Joint Research Centre of the European Commission, Institute for Systems, Informatics and Safety. Since 2000, she has been assistant professor at the University of Brescia, Department of Electronics for Automation. In 2005, she was visiting scholar at the Center for LifeLong Learning & Design (L3D), University of Colorado at Boulder, USA. She served as short papers co-chair of the ACM Conference Advanced Visual Interfaces (AVI06). Her current research interests include specification and design of visual interactive systems, W3C technologies supporting the implementation of visual interactive systems, metadesign, and end-user development.

Bassam Hasan is an associate professor of management information systems in the College of Business Administration at the University of Toledo. He holds a PhD in MIS from the University of Mississippi and an MBA from Missouri State University. His research work has been published in various IS journal. He has also presented his research at various regional, national, and international conferences.
Chris Higgins is a professor at the Ivey School of Business, University of Western Ontario, London, Canada. Higgins’ research focuses on the impact of technology on individuals, including such areas as computerized performance monitoring in the service sector; champions of technological innovation; alternative work arrangements; and, most recently, work and family issues and their impact on individuals and organizations. Higgins has published articles in several top journals, including the Journal of Applied Psychology, Communications of the ACM, Administrative Sciences Quarterly, Sloan Management Review, Information Systems Research, and Management Information Systems Quarterly. He is a former associate editor for Information Systems Research. Three of Higgins’ doctoral students (Rebecca Grant, Betty Vandenbosch, Deb Compeau) have won major awards for their dissertation research. Higgins major expertise is in statistical analyses of large databases. He has expertise in standard statistical techniques (ANOVA, MANOVA, regression, contingency tables) as well as analyzing structural equation models (e.g., AMOS, LISREL, partial least squares) and hierarchical models using HLM.

Tabitha James is an assistant professor in the Department of Business Information Technology, Pamplin College of Business, at Virginia Polytechnic Institute & State University. Her current research interests are in the areas of security and privacy in information technology, combinatorial optimization, heuristics, parallel computing, and social networks. She received a BBA in management information systems and a PhD in business administration with a major in management information systems and a minor in productions and operations management from the University of Mississippi.

Luay Kawasme is a Master of Science student in the Department of Computer Science at the University of Victoria, Canada. His primary research interest focuses on the storage and retrieval of context patterns. His research includes leveraging multidimensional databases and data mining approaches to extract context patterns. He has 10 years experience in software development. He is currently a software engineer at Pivotal Corporation, a Vancouver-based software company. His work is focused on developing business intelligence solutions for the customer relationship management (CRM) industry. He received a Bachelor of Electrical Engineering from the University of Jordan, Jordan in 1994. His Web site can be accessed at http://www.cs.uvic.ca/~lkawasme.

Chris Klisc is a lecturer in the School of Information Technology at Murdoch University in Western Australia. She is currently undertaking postgraduate research in computer mediated communication and is interested in e-learning and end-user computing. She has taught undergraduate students information technology literacy, multimedia, and systems analysis and design.

Rosa Lanzilotti received the Laurea degree in computer science in April 2001 and the PhD in computer science in May 2006, both from the University of Bari, Italy. Since April 2002, she has been assistant researcher. She is currently assistant researcher at the Department of Computer Science, University of Bari. Her research interests focus on human-computer interaction, user-centered design, usability engineering, accessibility, evaluation methods, Web and e-learning systems interfaces. Dr. Lanzilotti served in the scientific secretariat of AVI 2004 Conference, Gallipoli (LE), May 25-28, 2004, and of the workshop “eLearning and Human Computer Interaction: Exploring Design Synergies for More Effective Learning,” at INTERACT 2005 Conference, Rome, September 12-16, 2005. She is member of ACM SIGCHI (ACM’s Special Interest Group on Computer-Human Interaction).
Sten R. Ludvigsen (sten.ludvigsen@intermedia.uio.no) is a professor at InterMedia, University of Oslo, Norway, where he currently is the director and scientific leader. He received his PhD in educational sciences (education psychology) based on a study of learning in medical institutions. His general areas of expertise are ICT and learning and sociocultural theory. His specific interests include how to use digital learning resources in teaching and learning, the relationship between co-located and distributed settings, and applications of this in the educational sector and workplaces. Professor Ludvigsen leads the PhD program in learning, communication, and ICT at the Faculty of Education, University of Oslo. At InterMedia, he leads the research group on sociocultural studies in ICT and learning. He is Scientific Manager (2007-2009) of the Kaleidoscope European Network of Excellence in Technology-enhanced Learning.

Nathan Lupton received his MBA from the Eric Sprott School of Business at Carleton University in 2006 and is currently a PhD student at the Richard Ivey School of Business at the University of Western Ontario. His research interests include IT adoption in health care, as well as trust and affect in technology mediated collaborative work arrangements.

Tanya McGill is a senior lecturer in the School of Information Technology at Murdoch University in Western Australia. She has a PhD from Murdoch University. Her major research interests include end-user computing and information technology education. Her work has appeared in various journals including Decision Support Systems, European Journal of Psychology of Education, Journal of the American Society for Information Science, Journal of Organizational and End User Computing, and Information Resources Management Journal.

Anders I. Mørch (anders.morch@intermedia.uio.no) is an associate professor at InterMedia, University of Oslo, Norway. He received a PhD in informatics from the University of Oslo (thesis on end-user tailoring of object-oriented application). He has worked in industry for three years at the NYNEX Science and Technology Center, New York. His general interests are computers in education and workplace learning, human-computer interaction, and participatory design. His specific interests include computer-supported collaborative work and learning, introduction of groupware and Web portals in organizations, and end-user development. Dr. Mørch was a member of the European Network of Excellence on End-User Development, and currently he is a Senior Researcher in the European Knowledge-Practices Laboratory (KP-Lab) integrated project.

Gillian Sullivan Mort, PhD, is an associate professor in marketing at Griffith Business School, Griffith University, Nathan campus, Australia. She holds her PhD from the University of Queensland as well as an MBA, BSc, BA, and Dip Psych with a Dip Ed. She researches in the areas of online and mobile marketing, nonprofits, and born globals. Her work has been published in such journals as Journal of World Business, International Marketing Review, and Journal of Operations Management.

Piero Mussio was a researcher at the Laboratory of Cosmic Physics, National Research Council of Italy, Milan (LFCTR). At the LFCTR, he was data reduction officer in European collaborations and in charge of the Group of Data Analysis. In 1983, he joined the Department of Physics, Milan University, as associate professor of computer science, where he was responsible for the Image Processing and Interpretation Group. From 1996 to 2003, he was at the University of Brescia, Italy, as professor of computer science. He is presently full professor at the Department of Informatics and Communication,
Milan University. His research interests evolved from pattern recognition in images and complex system behaviors to pattern recognition in human computer interaction, visual computing, and in visual language and visual computing environment design, formal specification, and experimental validation. He is associate editor of the Journal of Visual Languages and Computing. He served as president of the Italian Chapter of IAPR. He served as program chair for the 1999 IEEE Workshop on Visual Languages Tokio, 1999; general co-chair of 2000 IEEE Workshop on VL, Seattle, 2000; and program co-chair of ACM Conference AVI’06, Venezia, 2006. Prof. Mussio is an IAPR fellow, a member of ACM, and member of SIGCHI Italy (the Italian Chapter of ACM SIGCHI). He is/was program committee member for conferences, schools, and workshops on visual languages, pattern recognition, machine vision, and human computer interaction.

Loredana Parasiliti Provenza received the Laurea degree in mathematics from the University of Messina, Italy, in 2001 and a master’s degree in information and communication security from the University of Milano, Italy, in 2002. She took the PhD in computer science at the University of Milano in 2006. Since May 2002, she is a research grant holder at the University of Milano, Department of Information and Communication. Her current research interests include specification, design and development of visual interactive systems, theory of visual languages, W3C technologies, and XML security and privacy preserving data mining.

Antonio Piccinno received the Laurea degree in computer science with full marks and honors in July 2001 and the PhD in computer science in March 2005, both from the University of Bari, Italy. Dr. Piccinno served in the scientific secretariat of the International Conference AVI 2004 (Advanced Visual Interfaces). He is member of ACM, ACM SIGCHI, and SIGCHI Italy (the Italian Chapter of ACM SIGCHI). Since April 2005, he has been assistant researcher at the Computer Science Department of the University of Bari. His research interests focus on human-computer interaction, visual interactive systems, theory of visual languages, end-user development, metadesign, component-based software development, WWW interfaces, multimodal and multimedia interaction, and adaptive interfaces.

Taner Pirim has a BS in environmental engineering from Marmara University in Istanbul and an MS in civil engineering emphasizing river hydraulics from the University of Mississippi. He has worked as an instructor and researcher in both the Engineering and Business Schools of the University of Mississippi. Since 2001, he has been working as a supercomputer consultant for the Mississippi Center for Supercomputing Research and as an adjunct professor for the Department of MIS/POM at the University of Mississippi.

Josephine Previte, PhD, is currently a postdoctoral fellow in the School of Advertising, Marketing and Public Relations at the Queensland University of Technology. Her doctoral research examined the role of the Internet in social marketing, applying a multidisciplinary approach that encompassed the sociology of technology, communication, and social marketing theory. In addition to a strong focus in marketing and society research, Josephine is also interested in a critical marketing analysis of consumption and e-marketplace behaviors and has other interests in the study of government and nonprofit marketing strategy.
Brian J. Reithel, PhD, is the dean of the School of Business Administration and a professor of MIS at the University of Mississippi. Previously, he served as MIS/POM department chair and as associate vice chancellor for University Relations. He has received numerous awards for excellence in teaching, research, and service over the past 20 years. He is the author of more than 70 research articles and papers that have appeared in leading journals and conference proceedings. He has also appeared in major practitioner magazines, including ComputerWorld, PCWorld, and Inc. He is currently the national executive-vice president-elect of the Association of Information Technology Professionals. His research interests revolve around emerging technologies as well as factors that impact the success of systems development efforts, particularly in the area of strategic information systems.

David F. Rico has been in the field of computer programming since 1983. He worked on NASA’s $20 billion space station in the 1980s, he worked for a $40 billion Japanese corporation in Tokyo in the early 1990s, and he worked on U.S. Navy fighters such as the F-18, F-14, and many others. He is also supported the U.S. Defense Advanced Research Projects Agency (DARPA), Defense Information Systems Agency (DISA), Space and Naval Warfare Center (SPAWAR), Air Force, and Army. He has been an international keynote speaker, published numerous articles on three continents, and written a textbook on computer science. He holds a bachelor’s degree in computer science, a master’s degree in software engineering, and is completing a doctoral degree in information technology.

Ron Thompson is associate professor of management in the Babcock Graduate School of Management at Wake Forest University. His research has been published or is forthcoming in a variety of journals, including MIS Quarterly, Information Systems Research, the Journal of Management Information Systems, and Information & Management, and he has given presentations at national and international conferences. Ron’s current research interests include communication misreporting in IS projects, multi-attribute decision making, and the use of second-generation data analysis techniques. Ron is a former associate editor of MIS Quarterly.

Jens H. Weber-Jahnke is an associate professor in the Department of Computer Science at the University of Victoria, Canada. He holds a PhD in natural sciences (summa cum laude) from the University of Paderborn, Germany. He has authored more than 80 peer-reviewed publications and received several prestigious awards, including the German Software Engineering Prize (Ernst-Denert Stiftung) and a fellowship of the Advanced Systems Institute of British Columbia. His research interests lie in the area of medical informatics, pervasive computing, software security, and interoperability.
