About the Contributors

**Khalid Aldiri** is currently a visiting researcher at the electronic imaging and media communications department at the Informatics school at University of Bradford. His main research interests lie in the area of the effect media cues as a form of social presence on trust in B2C e-commerce, and he has many publications in this field. He has publications in the fields of, virtual environments, e-commerce and multimedia systems.

**Eman Ibrahim Al Haj Ali** graduated from Auckland University of Technology, New Zealand, with a Master of Information Technology degree in 2005. Her thesis was on mobile commerce adoption across the supply chain in New Zealand businesses. Her research has been presented at the Americas Conference on Information Systems. She is now at United Arab Emirates University.

**Jeff Baker** (jeff.baker@ttu.edu) is a doctoral student in information systems and quantitative sciences at the Rawls College of Business Administration at Texas Tech University. His research interests include electronic commerce, visualization of multidimensional datasets, and information systems strategy. His research appears in the Journal of Electronic Commerce and Electronic Commerce Research.

**Djamal Benslimane** is a full professor of computer science at Lyon University, Lyon, France. His research interests include databases interoperability, Web services, and ontologies. He received his PhD in computer science from Blaise Pascal University. He’s member of the LIRIS-CNRS lab.
Amit Bhatnagar is an associate professor of marketing at the University of Wisconsin-Milwaukee. He received his PhD in marketing from the State University of New York at Buffalo, MS in aeronautical engineering from IIT, Kanpur, India and BS in mechanical engineering from IIT, Kanpur, India.

Michael Bourlakis is currently a senior lecturer at Brunel University (UK). Michael has more than 10 years experience dealing with marketing, distribution channels and supply chain management. Michael graduated in business administration at the Athens University of Economics and Business (Greece) and obtained both his MBA and PhD degrees from the University of Edinburgh (UK). Michael worked as a research associate at the Management Centre, University of Leicester (UK) and at the Oxford Institute of Retail Management, Templeton College, University of Oxford (UK) and as a lecturer at Newcastle University. He has published in various logistics, supply chain management and marketing journals.

Carl S. Bozman, PhD teaches courses in principles of marketing, research methods, business planning, and new product development. His research interests include demand estimation methods and the new product development process. Professor Bozman also consults in the areas of new product development and demand assessment.

Grégory Bressolles is Professor of Marketing at BeM — Bordeaux Management School. He holds a Ph.D from the University of Social Sciences of Toulouse (France). He is responsible for the e-Commerce and Retail Chair of BeM. His research interests included consumer behaviour, the Internet, e-commerce, retail and services marketing. He has published his research in many international journals like International Journal of e-Business Research, Journal of Customer Behavior, Recherche et Applications en Marketing and he has presented his works in many international conferences.

T. C. Edwin Cheng is chair professor of management in the Department of Logistics, The Hong Kong Polytechnic University. He obtained a BSc(Eng)(Hons) from the University of Hong Kong, an MSc from the University of Birmingham, UK, and a PhD and an ScD from the University of Cambridge, UK. He has previously taught in Canada, England and Singapore. His expertise is in operations management; in particular quality management, business process re-engineering and supply chain management. An active researcher, he has co-authored four books and published over 380 academic papers in such journals as Management Science, Operations Research, and MIS Quarterly, among others. A registered professional engineer and a seasoned management consultant, Prof. Cheng regularly advises business and industry and provides management training and executive development to public and private organizations.

Bill Doolin is Microsoft Professor of E-Business at Auckland University of Technology, New Zealand. His research focuses on the organizational implications of information technology and the adoption of electronic business technologies. His work has appeared in journals such as Electronic Markets, Information Systems Journal, Journal of Global Information Management and Journal of Information Technology.

Uchenna Cyril Eze is a faculty at Multimedia University, Malaysia. He holds a Ph.D. in e-commerce strategic value from NTU, Singapore. Earlier, he worked in First Bank PLC Nigeria, after which he joined Lawdon Maritime Ltd. Nigeria. He is the Chair of Center for e-Services Entrepreneurship and
About the Contributors

Marketing [CESEM] in Multimedia University, where he drives research activities among members and external partners. He is also involved in extensive research collaborations with academics and practitioners from several parts of the globe including Malaysia, Nigeria, Singapore, Hong Kong, India, and USA. He serves on the editorial boards of several journals and seats in the committee of advisors of several international and regional conferences. He has published several papers in international conferences and journals including Americas Conference on Information Systems, Australasian Conference on Information Systems, Journal of Global Information Technology Management, International Journal of E-Business Research, International Journal of Electronic Business, and Australasian Journal of Information Systems. His research interests include knowledge management, IS, e-business, strategic management, entrepreneurship and development. His current research involves ISP service quality and customer satisfaction and IT governance.

Helen Fox has graduated from the School of Agriculture, Food and Rural Development at Newcastle University.

Daniel Friesner, PhD is an assistant professor in the Gonzaga University School of Business. His areas of expertise are applied econometrics and health economics. Professor Friesner teaches economics and statistics at both the undergraduate and MBA levels. His research interests lie primarily in the area of management science, and in particular, efficiency measurement and process improvement issues in health care.

Leopoldo Gemoets is an Associate Professor in the Department of Information and Decision Sciences at the University of Texas at El Paso. He is the founding director of UTEP's CEDARS (Center for Entrepreneurial Development, Advancement, Research and Support). A former NASA faculty fellow with the California Institute of Technology, he has over 20 years experience in developing and implementing information technology for industry and government. He is also the faculty coordinator to the Institute for community-based teaching and learning. Dr. Gemoets has published in various international and national journals in the area of international information technology. Other areas of expertise include: E-Commerce, Smart Communities, Strategic use of IT, ERPs and CRMs.

Naveen Gudigantala is a PhD Candidate in MIS in the Rawls College of Business at Texas Tech University. He received his MS in MIS from Texas Tech University. His research interests include Web-based decision support systems, Systems analysis and design, and Information security. His work has appeared in Decision Support Systems, International Journal of E-Business Research, International Journal of Information and Operations Management Education, and Twenty-Sixth International Conference on Information Systems.

Laura L. Hall is an Associate Professor in the Department of Information and Decision Sciences, in the College of Business at the University of Texas at El Paso. Dr. Hall’s major research interests are in e-Commerce with emphasis on supply chain management, distance education development, and minority workforce training. She has published in the Journal of Organizational Computing and Electronic Commerce, the Journal of Behavior and Information Technology, Information Resource Management, the International Online Conference on Teaching Online in Higher Education, the Proceedings of the Decision Sciences Institute, and the Proceedings on Human Computer Interaction.
Ezz Hattab is an associate professor in e-business. He developed several software and e-commerce applications. He is an active member of numerous professional and scientific societies, including the Arab Society of Computers (ASC), and Jordanian Society of Computers (JSC). Dr. Hattab has 25 publications and 4 books in the area of Information Technology, e-business, and web applications. He is a member of the technical committee of The International Arab Journal of Information Technology (IAJIT), EBEL, e-Jordan and an associate editor of the International Journal of Mobile Learning and Organization (IJMLO). He is a member of the high supervision committee of Management Information Stream at the Ministry of Education in Jordan. Dr. Hattab has been awarded a scholarship from the EU to pursue his PhD in information technology. His PhD research was part of the Europe research project “The Webminer”, in which he proposed numerous algorithms and techniques that handle web information retrieval and search.

Blanca Hernandez holds a Ph.D. in Business Administration and is lecturer in the Department of Marketing and Business Studies at the University of Zaragoza (Spain). Her research interests include the acceptance of new technologies, knowledge management systems, and e-commerce. Ms. Hernandez’s work has been published in journals such as Industrial Marketing Management, Internet Research, Technovation, Interacting with Computers and Online Information Review.

David Hobbs was a Senior Lecturer at the Electronic Imaging and media communications department at the University of Bradford. He is a Fellow of the Higher Education academy (FHEA), and a member of The Institution of Electrical and Electronic Engineer (IEEE), British Computing Society (MBCS). His main research interests lie in the area of virtual environments, particularly in the representation and conveying of emotion through facial expressions and gestures presented on virtual humans. Application areas include e-learning, e-commerce and collaborative work environments (CWE). This arises out of long-standing interests in computer-based self-instructional systems, particularly multimedia systems, and in the application of artificial intelligence techniques within such systems. He has publications in the fields of, virtual environments, e-learning, e-commerce and collaborative work environments (CWE), multimedia systems, and in the application of artificial intelligence techniques.

Xiaorui Hu is an associate professor of decision sciences and information technology management at the John Cook School of Business at Saint Louis University. She received her PhD in economics from the University of Texas at Austin. Her research focuses on trust related issues in electronic commerce, B2B markets, telecommunication market evolution, information security, and culture impact on international business. Her work has appeared in Information Systems Research, Decision Support Systems, IEEE Computer, Journal of Organizational Computing and Electronic Commerce, International Marketing Review, Journal of Global Information Management, and Journal of Promotion Management, and other outlets.

Minh Q. Huynh is an Assistant Professor at Southeastern Louisiana University. He received his Ph.D. from State University of New York at Binghamton. His teaching expertise are in the areas of E-commerce, Telecommunications, Decision Support Systems. Research interests include E-learning, computer supported collaborative learning, and IS outsourcing. His publications appear in such journals as the Communications of ACM, Journal of AIS, Communications of AIS, European Journal of IS, Jour-
nal of Electronic Commerce in Organizations. Prior to his academic career, he had worked in the areas related to computer programming, systems management, technical support, and network security.

**Julio Jimenez** holds a Ph.D. in Business Administration and is professor in the Department of Marketing and Business Studies at the University of Zaragoza (Spain). His research in adoption and diffusion of innovations has been published in several journals, such as Research Policy, Industrial Marketing Management, Internet Research, Interacting with Computers, Online Information Review and Technovation.

**Donald R. Jones** is an associate professor and James C. Wetherbe Professor of MIS in the Rawls College of Business at Texas Tech University. He received his PhD from the University of Texas at Austin. His research interests focus on the effects of DSS features on decision making, use of database queries in problem solving, and human behavior in online environments. His research has appeared in Decision Support Systems, Organization Behavior and Human Decision Processes, The Journal of Information Systems, Information & Management, among others.

**Larry Kerschberg** is professor of computer science, at George Mason University, Fairfax, VA 22030 USA. He is director of E-Center for E-Business and directs the MS in E-Commerce Program. He is past chairman of the information and software engineering department at Mason. During 1998 he was a Fellow of the Japan Society for the Advancement of Science at Kyoto University. He holds a BS in engineering from Case Institute of Technology, and MS in Electrical Engineering from the University of Wisconsin—Madison, and a PhD in engineering from Case Western Reserve University. He is editor-in-chief of the Journal of Intelligent Information Systems, published by Springer. He recently served as an editor and contributor of the book The Functional Approach to Data Management: Modeling, Analyzing and Integrating Heterogeneous Data, published at Heidelberg, Germany, Springer, 2004. His areas of expertise include expert database systems, intelligent integration of information, knowledge management, and agent-based semantic search. His recent papers have focused on ontology-driven semantic search in knowledge sifter, knowledge representation using topic maps, and methodologies for the creation and management of semantic Web services.
About the Contributors

Mabel T. Kung is professor of information systems and decision sciences department at the Mi-Haylo College of Business and Economics, California State University at Fullerton. Her PhD is from the McCombs School of Business at The University of Texas at Austin. Her research publications and industrial experience include the fields of e-commerce, corporate training, strategic planning and benchmark technology, web component development and enterprise database systems.

Lawrence C. F. Lai is a general manager of New World TMT Limited responsible for technology, media and telecommunication investments. He has more than 15 years experience in serving senior positions in private equity investment and telecommunication operations in Hong Kong. He received a BA from the University of Western Ontario, Canada, an MBA from Heriot-Watt University, UK, and a Doctor of Business Administration from The Hong Kong Polytechnic University.

Francisco J. Lopez received a college degree in actuarial sciences from Universidad Anahuac, in Mexico City, in 1984. He enrolled in the Ph.D. program in Business at the University of Mississippi in August 1996 and obtained his doctoral degree in August 1999. Teaching experience includes a visiting assistant position at the University of Mississippi between August 1999 and May 2000; assistant and associate professor at the University of Texas at El Paso between August 2000 and July 2007; and associate professor at Macon State College since August 2007. He was also a visiting professor at the Helsinki School of Economics, campus Mikkeli during Fall 2002. His research interest includes convex analysis (linear and positive hulls), DEA, linear programming, scheduling, and the development of theory and algorithms in these areas.

Zakaria Maamar received his PhD in computer sciences from Laval University (Canada) in 1998. Currently, he is an associate professor in the College of Information Technology at Zayed University, Dubai, United Arab Emirates. His research interests lie in the areas of context-aware computing, Web services, and software agents.

M. Adam Mahmood is a Professor of Computer Information Systems in the Department of Information and Decision Sciences at the University of Texas at El Paso. He also holds the Ellis and Susan Mayfield Professorship in the College of Business Administration. He was a visiting faculty at the Helsinki School of Economics and Business Administration in Finland and a visiting Erskine Scholar at the University of Canterbury in New Zealand. Dr. Mahmood’s research interest centers on economics of information systems, electronic commerce, strategic and competitive information systems, group decision support systems, and organizational and end-user computing. On this topic and others, he has published over 85 technical research papers in some of the leading journals and conference proceedings, including the Journal of Management Information Systems, MIS Quarterly, Decision Sciences, European Journal of Information Systems, INFOR—Canadian Journal of Operation Research and Information Processing, Information and Management, Journal of Organizational and End User Computing, Data Base, and others. Dr. Mahmood presently serves as the editor of the Journal of Organizational and End User Computing. As a Governor’s appointee, he also serves as a member of the Texas Department of Information Resources Board of Directors. He has also served as president of the Information Resources Management Association.
About the Contributors

Maria José Martín holds a Ph.D. in Business Administration and is senior lecturer in the Department of Marketing and Business Studies at the University of Zaragoza (Spain). Her main research line is online consumer behavior and e-commerce. Ms. Martín de Hoyos’ work has been published in several journals, such as Industrial Marketing Management, Internet Research, Interacting with Computers, Online Information Review and Technovation.

Matthew Q. McPherson, PhD is an assistant professor in the Gonzaga University Jepson School of Business. His areas of expertise include international economics, development, and health economics. Professor McPherson teaches international economics and global economic issues at both the undergraduate level. His research interests include international trade and finance, management science, and issues in health care. Professor McPherson is also the managing editor of the Journal of Economic Development and Business Policy.

Saravanan Muthaiyah is a senior lecturer at Multimedia University, Cyberjaya, Malaysia. He holds a bachelors degree in accounting and finance, a Msc in Information Technology and a doctoral degree in Information Technology from George Mason University, Fairfax, VA. He is also a Fulbright scholar and fellow under the auspicious of the graduate research exchange program sponsored by the US Department of State. His research interests include semantic web, ontology mapping, systems integration, systems engineering, topic maps, knowledge management and enterprise architectures. His recent papers have focused on ontology mapping and mainly solving heterogeneity issues for Semantic Web.

Jacques Nantel is Professor of Marketing at H.E.C. Montréal. He holds a Ph.D from Indiana University. He is the founder and the first director of the RBC Financial Group Chair of e-commerce. Since March 2007, he is General Secretary (Senior Associate Dean) of HEC Montréal. Concerning research, He has also published several articles in journals such as the Journal of Retailing, The Journal of Interactive Marketing, The International Journal of e-commerce, The Journal of Business Research, the European Journal of Marketing, the Journal of Social Behaviour and Personality, and the Journal of Business Ethic. His research interests included the impact of Information Technologies (I.T.) on consumers’ behaviour and on marketing strategies of organisations.

Levent V. Orman is Professor of Information Systems at Cornell University. He received Ph.D. in Information Systems from Northwestern University. He has taught courses and written articles on electronic commerce, database management, and decision support systems. His articles appeared in a variety of journals ranging from Information Systems, Acta Informatica, and IEEE Transactions on Knowledge and Data Engineering, to MIS Quarterly, Journal of MIS, and Electronic Commerce Research. He serves on the editorial board of the Journal of Information Technology and Management. Professor Orman is currently working on electronic commerce and electronic services.

M. A. Otair is an instructor at the Arab Academy for Banking and Financial Sciences. He received his BSc in computer science from IU-Jordan and his MSc and PhD in 2000, 2004, respectively, from the Department of Computer Information Systems -Arab Academy. His major interests are neural network learning paradigms, mobile-computing, e-learning and e-business. Dr. Otair has 19 publications (International journals and conferences) in the area of neural networks, information technology, m-computing, and e-applications.
Savvas Papagiannidis graduated from the physics department of the University of Newcastle upon Tyne. Upon completion of his PhD he joined the eBusiness Group at the business school in the same University. Savvas has started a number of eBusiness ventures and also worked as a freelance Internet developer. His research interests include management of Internet and emerging technologies, high-technology related entrepreneurship and e-business models.

Rami Qahwaji is currently a Senior Lecturer at the Electronic Imaging and media communications department at the University of Bradford. He is a member of the Higher Education academy (HEA), The Institution of Electrical Engineer (IEE), International Society for Computers and Their Applications (ISCA) and the American Geophysical Union (AGU). His research expertise include: image processing, pattern recognition and machine learning and the design of machine vision systems. He has publications in the fields of solar imaging, medical imaging, biometrics and face recognition, morphological transforms, statistical classifiers and neural networks, security and watermarking.

R. Rajendran is a professor in the Department of Management at Sri Ramakrishna Institute of Technology, Coimbatore, India. He holds a Ph.D. and M.Phil. in management from the Bharathiar University and an M.B.A. and B.E.(Hons.) degree in Mechanical Engineering from the Madras University. He has prior business and industry experience. He served as a senior engineer for Bharat Electronics Limited, a public sector undertaking of Government of India under administrative control of Ministry of Defense, for ten years. Prior to joining academic in the year 2000, he was managing a small manufacturing partnership firm for six years. His research focuses on information systems strategic management, electronic commerce, electronic business and small business management. He has published his findings in journals such as Digital Business Review, Journal of Electronic Commerce Research, International Journal of E-Business Research and Organization Management. He is a member of the international editorial review board of International Journal of E-Business Research.

Jaeki Song (jaeki.song@ttu.edu) is an associate professor of information systems and quantitative sciences at the Rawls College of Business Administration at Texas Tech University. His research interests include electronic commerce, web design, information systems strategy, and technology adoption. His research appears in Management Science, Decision Support Systems, Information and Management, IEEE Transactions on Professional Communication, and other leading journals. He received his PhD from the University of Wisconsin-Milwaukee.

William J. Tastle received his PhD in advanced technology with specialization in systems science from the Thomas J. Watson School of Engineering and Applied Science of the State University of New York, University Center at Binghamton in 1994 and an MBA in MIS from the School of Management at Binghamton. He is a professor of information systems in the business school at Ithaca College and is active in the IS community having served as the president of the Association for Information Technology Professionals, Education Special Interest Group (EDSIG), and on many other committees. He is the managing editor of the International Journal of General Systems. Currently he is organizing the 2008 conference of the North American Fuzzy Information Processing Society and serves on its board of directors as treasurer. He is a consultant for numerous organizations including Los Alamos National Laboratory. Dr. Tastle’s current areas of interest involve measures of consensus, dissention, agreement and disagreement, requirements analysis elicitation, and outsourcing.
Hannu Verkasalo acts as a project manager at the national research project MoMI (modeling the usage and business of the mobile Internet) at the Helsinki University of Technology in Finland. Hannu Verkasalo has actively published on the evolution of the mobile service market. He is currently finishing his doctoral dissertation on the emergence of the mobile Internet and new mobile service concepts. Verkasalo has particularly focused on the empirical modeling of mobile services, utilizing the recently developed handset-based research method. In addition to research work and consulting in the mobile industry, Verkasalo gives lectures on network economics, operator business and telecommunication regulation.

K. Vivekanandan is a reader of Bharathiar School of Management and Entrepreneurship Development at Bharthiar University, India. He received his Ph.D. in computer simulation from the same university in the year 1996. His research interest includes electronic commerce, electronic business, and data mining. His publications have appeared in Journal of Electronic Commerce Research, Digital Business Review, and other national and international research journals.

Avinash M. Waikar, Ph.D., University of Oklahoma, is a registered professional engineer with the Louisiana State Board of Professional Engineers. He has approximately ten years of industrial and manufacturing experience in operations management. He has been a consultant in the areas of operations management and statistics to businesses and has published numerous journal articles in the areas of operations management and other business disciplines. His research interests are in the area of operations management and MIS. He has been a recipient of Outstanding Paper Award. Currently he teaches operations management and statistics at Southeastern Louisiana University.

Mark J. Wierman is an assistant professor of computer science at Creighton University in Omaha, Nebraska. He received his PhD in Systems Science from Binghamton University. His current research interests are the application of the mathematics of uncertainty to political science and generalized information theory. He has published over 30 papers and his second book, Applying Fuzzy Mathematics to Formal Models in Comparative Politics (with TD Clark, JM Larson, JN Mordeson, and JD Potter) will be published in spring 2008.

Yuhong Wu was an assistant professor of marketing at Christos M. Cotsakos College of Business, William Paterson University. She received her PhD degree in marketing from the University of Texas at Austin. Her research interests lie in the areas of internet marketing and e-commerce, strategies in network market, and new product development and management. Her works has appeared in Journal of Marketing and other outlets.

Ruiliang Yan is an assistant professor of marketing at the Virginia State University. He received his PhD in marketing from the University of Wisconsin, Milwaukee, MS from Sichuan University, China and a bachelor's degree from Southwest Agricultural University, China.

Andy C. L. Yeung received an MSc from the University of Bradford, UK, and a PhD from the University of Hong Kong. He is currently an Associate Professor in the Department of Logistics, The Hong Kong Polytechnic University. His research interests include quality management, operations management and supply chain management. He has published papers in Production and Operations.
About the Contributors

**Jenny Yi Zhang** is associate professor of information systems and decision sciences department at the MiHaylo College of Business and Economics, California State University at Fullerton. She earned her PhD in information systems from the New Jersey Institute of Technology. Her research areas are mainly focused on e-business, knowledge management, virtual communities, virtual teams, and business intelligence.

**Zuopeng (Justin) Zhang** is an Assistant Professor of Management Information Systems at School of Business and Economics in State University of New York at Plattsburgh. He obtained his Ph.D. in Business Administration from Smeal College of Business, The Pennsylvania State University. His research interests include economics of information systems, knowledge management, electronic business, and workflow systems. His research has recently appeared at Knowledge and Process Management, International Journal of E-Business Research, Encyclopaedia of Portal Technology and Applications, Encyclopaedia of Mobile Computing and Commerce, and in the proceedings of major conferences in Information Systems.
