About the Contributors

**Liang-Jie (LJ) Zhang** is a Research Staff Member and Program Manager of Application Architectures and Realization at IBM T.J. Watson Research Center. He has made significant original contributions to Services Computing innovations and interactive media systems. Zhang is the founding chair of IBM Research’s Services Computing Professional Interest Community and has been leading an IBM Service-Oriented Architecture (SOA) tooling and architecture research project for years. He has been co-leading IBM’s SOA Solution Stack (a.k.a SOA Reference Architecture: Solution View) project since 2004. His new book Services Computing has been published by Springer. He has received 2 IBM Outstanding Technical Achievement Awards, 9 IBM Creative Contribution Awards, an Outstanding Achievement Award by the World Academy of Sciences, and an Innovation Leadership Award from Chinese Institute of Electronics. Dr. Zhang has 36 granted patents and 20 pending patent applications. As the lead inventor, he holds federated Web services discovery and dynamic services composition patents. He is the chair of IEEE Computer Society Technical Committee on Services Computing. He has been appointed as the Editor-in-Chief of IEEE Transactions on Services Computing.

* * *

**Wil van der Aalst** is a full Professor of Information Systems at the Technische Universiteit Eindhoven having a position in both the Department of Mathematics and Computer Science and the department of Technology Management. Currently he is also an adjunct professor at Queensland University of Technology working within the BPM group. His research interests include workflow management, process mining, Petri nets, business process management, process modelling, and process analysis.

**George Athanasopoulos** is currently a researcher and member of the S3 Laboratory (www.s3lab.com) and a Ph.D. candidate student at the Department of Informatics and Telecommunications of the National and Kapodistrian University of Athens (www.di.uoa.gr). He has a diploma from Department of Computer Engineering and Informatics of the University of Patras (www.ceid.upatras.gr) and has participated in various research and development projects during his work experience. His research interests include service-oriented computing with a focus on the context-adaptable composition of heterogeneous services comprising various types of services such Web services (either stateless or stateful), P2P services, sensor and actuator services, etc. Additional research interests are related to distributed systems and software architecture modeling as well as modern programming methodologies.
About the Contributors

Hyerim Bae is an assistant professor in the Industrial Engineering Department at Pusan National University (PNU), Korea. He received PhD, MS, and BS degrees from the Industrial Engineering Department at Seoul National University, Korea. He had been a manager for information strategic planning at Samsung Card Corporation before he joined PNU. He is interested in the areas of Business Process Management (BPM), process-based B2B integration, and ubiquitous business computing. His current research activities include analysis of business process efficiency, controlling of logistics processes with context awareness, and convenient modeling of business processes.

Joonsoo Bae is an Assistant Professor of Department of Industrial and Information Systems Engineering in Chonbuk National University. He received PhD, MS, and BS degrees in Industrial Engineering from Seoul National University, South Korea in 2000, 1995, and 1993, respectively. He also completed one year postdoctoral course in College of Computing of Georgia Institute of Technology at 2006. He had industry experience in LG-EDS as a technical consultant of SCM & CRM team from 2000 to 2002. He is interested in system design and integration of management information system and e-Business technology. His research topics include business processes management using workflow systems and advanced internet application.

Roger Barga works for the Microsoft Corporation as lead architect for External Research in Microsoft Research (MSR). Prior to assuming this role, Roger was a researcher in the database group at Microsoft Research since 1997. He is a member of the ACM and IEEE. Contact him at barga@microsoft.com.

Carlo Batini is full professor of Computer Engineering at Università di Milano Bicocca. His research interests include cooperative information systems, information systems and data base systems modeling and design, usability of information systems, data and information quality. He has published over 30 papers in international journals and books, about 80 papers at the international level, including IEEE and ACM Transactions, co-edited five books, and published 15 books. Formerly, since 1995 to 2003 in Italy he was a member of the board of directors of the Authority for Information Technology in the Public Administration, where he headed several large scale projects for the modernization of the public administration.

José Felipe Mejia Bernal is PhD student in software engineering at Politecnico di Torino, where he received his M.S. degree in Computer Engineering in 2006, and he worked as research assistant in Department of Computer Science and Automation. His current research interests include dynamic business process, Rule-based programming and context-aware systems.

Elisa Bertino is professor of computer science at Purdue University and Research Director of the Center for Information and Research in Information Assurance and Security. Prior to joining Purdue, she was a professor and department head at the Department of Computer Science and Communication of the University of Milan. She has been a visiting researcher at the IBM Research Laboratory (now Almaden) in San Jose, at the Microelectronics and Computer Technology Corporation, at Rutgers University, at Telcordia Technologies. Her recent research focuses on privacy techniques for databases, digital identity management, policy systems, and security for web service. She is a Fellow of ACM and of IEEE. She received the IEEE Computer Society 2002 Technical Achievement Award and the IEEE Computer Society 2005 Kanai Award. She a member of the editorial board of IEEE Transactions on Dependable and Secure Computing, and IEEE Security & Privacy.
**Ramesh Bharadwaj** is currently a member of the Software Engineering Section of NRLNaval Research Laboratory’s Center for High Assurance Computer Systems. He also served as an adjunct associate professor of computer science at the George Washington University. His research interests include methods and tools for engineering software for high assurance systems, secure agents and agent based software engineering, languages and tools for model-driven development of mission-critical systems, computational logic. He received a Ph.D. in software engineering from McMaster University. He is a member of IEEE and ACM.

**Sami Bhiri** is a senior researcher at DERI - the National University of Ireland, Galway, where he is leading the SOA research unit and managing several EU projects. Before joining DERI, he was a research and teaching assistant in the University of Nancy 1 and in the ECOO team of the LORIA-INRIA research laboratory. His research interests are in the area of applying semantics to B2B Integration, Service Oriented Computing and Business Process Management.

**Ken Birman** is Professor of Computer Science at Cornell University. He currently heads the QuickSilver project, which is developing the world’s fastest and most scalable publish-subscribe system and a new, highly automated, platform aimed at making it dramatically easier to build scalable clustered applications. Previously he worked on fault-tolerance, security, and reliable multicast. In 1987 he founded a company, Isis Distributed Systems, which developed robust software solutions for stock exchanges, air traffic control, and factory automation. For example, Isis currently operates the New York and Swiss Stock Exchanges, the French air traffic control system, and the US Navy AEGIS warship. The technology permits these and other systems to automatically adapt themselves when failures or other disruptions occur, and to replicate critical services so that availability can be maintained even while some system components are down. In contrast to his past work, Birman’s recent work has focused on issues of scale, self-management and self-repair mechanisms for complex distributed systems, such as large data centers and wide-area publish-subscribe. The very large scale of these kinds of applications poses completely new challenges. For example, while protocols for data replication on a small scale are closely tied to database concepts such as two-phase commit, these large scale applications are best viewed as probabilistic systems, and the most appropriate technologies are similar to techniques seen in peer-to-peer file sharing applications. Birman is the author of several books. His most recent textbook, “Reliable Distributed Computing: Technologies, Web Services, and Applications”, was published by Springer-Verlag in May of 2005. Previously he wrote two other books and more than 200 journal and conference papers, including one that appeared in Scientific American in May, 1996. Dr. Birman was also Editor in Chief of ACM Transactions on Computer Systems from 1993-1998 and is a Fellow of the ACM.

**Ylva Brandt** finished her studies at the Braunschweig University of Technology, Germany, with a diploma (equivalent to a Master's Degree) in computer science in September 2005. The main focus of her studies was directed at distributed systems, data bases and E-Learning. In July 2007 she earned a second Master’s Degree (Master of Arts in Education) at the Georg-August-University in Göttingen, Germany. In her master thesis, she explored the influence of gender on students' academic self-concept. Currently, she is continuing her studies at the teacher training college in Göttingen. Furthermore, she teaches mathematics and computer science at the Max-Planck-Gymnasium in Göttingen. Her current research focuses on new design concepts for computer science learning materials.
Carsten Buschmann received his Master of Computer Science from the Braunschweig University of Technology, Germany, in 2002. He conducted research at the Braunschweig University of Technology and the University of Lübeck in the area of wireless sensor networks. Besides exploring middleware support for application development for distributed pervasive computing within the SWARMS project, he developed context awareness protocols for wireless sensor networks. He received his PhD in January 2009 from the University of Lübeck. Serving as General Manager and CTO of the coalesenses GmbH, a startup company founded in 2005 as a spin-off of the University of Lübeck, he is the leading force behind the development of iSense, a modular hardware and software platform for wireless sensor networks.

Jorge Cardoso joined the University of Madeira (Portugal) in March 2003. He previously gave lectures at University of Georgia (USA) and at the Instituto Politécnico de Leiria (Portugal). Dr. Cardoso received his Ph.D. in Computer Science from the University of Georgia in 2002. While at the University of Georgia, he was part of the LSDIS Lab. where he did extensive research on workflow management systems. In 1999, he worked at the Boeing Company on enterprise application integration. Dr. Cardoso is the organizer of the International Workshop on Semantic and Dynamic Web Processes series. He has published over 80 refereed papers in the areas of workflow management systems, semantic Web, and related fields. He has also edited 4 books on semantic Web and Web services. He is on the Editorial Board of the Enterprise Information Systems Journal, the International Journal on Semantic Web and Information systems, and the International Journal of Information Technology. He is also member of the Editorial Advisory Review Board of Idea Group Inc. Prior to joining the University of Georgia, he worked for two years at CCG, Zentrum für Graphische Datenverarbeitung, where is did research on Computer Supported Cooperative Work.

James Caverlee is a Ph.D. candidate in the College of Computing at Georgia Tech and a member of the multidisciplinary Tennenbaum Institute for enterprise transformation. His research interests are generally in the areas of Web and Distributed Information Management, with an emphasis on: (1) Enterprise Computing and Workflow Management; (2) Spam-Resilient Web-Scale Computing; and (3) Web Information Retrieval and Management. James graduated magna cum laude from Duke University in 1996 with a B.A. in Economics. He received the M.S. degree in Engineering-Economic Systems & Operations Research in 2000, and the M.S. degree in Computer Science in 2001, both from Stanford University.

W.K. Chan received this Ph.D. degree in Software Engineering from The University of Hong Kong, Hong Kong in 2004. He is a Lecturer of City University of Hong Kong. He publishes service computing research results actively in ICSE and FSE. He serves on the program committee of international conferences and reviews papers of many software engineering conferences and journals such as TSE, TOSEM, ASEJ, JSS, ICSE, FSE, ISSSTA, ASE, COMPASAC, QSIC, APSEC, and ISSRE. He has practiced software engineering in the industry for more than 10 years before completing his PhD study. His research interests include solving software engineering issues in embedded system, applications of pervasive computing and service computing. He is a member of ACM and IEEE.

S.C. Cheung received his Ph.D. degree in Computing from the Imperial College of Science, Technology and Medicine, University of London, London, U.K in 1994. He is an Associate Professor of Computer Science and Engineering, and Associate Director of CyberSpace Center at the Hong Kong University of
About the Contributors

Science and Technology. He is an associate editor of the IEEE Transactions on Software Engineering, and participates actively into the program and organizing committees of many major international conferences on software engineering, distributed systems and web technologies. His work has been reported by more than 100 publications at international journals and conferences, which include TOSEM, TSE, ASE, DSS, TR, ICSE, FSE, ESEC and ER. He is a Chartered Fellow of the British Computer Society and a senior member of the IEEE. He co-founded the first International Workshop on Services Computing (SEIW) in 2005, the first International Workshop on Automation of Software Testing (AST) in 2006, and was the tutorials chair of ICSE 2006. He has co-edited special issues for the Computer Journal and the International Journal of Web Services Research (JWSR), such as ICSE, FSE, ISSTA, ASE, ICDCS, ER, COMPSAC, APSEC, QSC, EDOC, SCC and CEC. His research interests include software engineering, services computing, ubiquitous computing, and embedded software engineering.

Marco Comerio is a PhD student at Università di Milano Bicocca. He received his laurea degree in Computer Science at the same University in 2006. His PhD thesis regards the definition of a novel approach for semantic web service selection based on the evaluation of non-functional properties. His research interests are mainly in semantic web services, service oriented design methodologies and non-functional properties (NFP). He has published about 10 papers in international conferences and journals. He is currently working in the European IST project n. 27347 SEEMP (Single European Employment Market-Place) and in the Italian FIRB project RBNE05XYPW NeP4B (Networked Peers for Business).

Jason Crampton is a Reader in Information Security in the Information Security Group (ISG) at Royal Holloway, University of London, United Kingdom. He joined the ISG having completed his PhD in 2002. His research is mainly concerned with the development of formal models for access control in computerized systems, with particular interest in the management of authorization policies. He is an associate editor of ACM Transactions on Information and System Security and has been a programme committee member for numerous security-related conferences.

Hasan Davulcu has been an assistant professor in the Department of Computer Science and Engineering at Arizona State University since 2002. He received a Ph.D. in computer science from the State University of New York at Stony Brook. His research interests include logic-based workflow modeling, Web mining, and information integration.

Flavio De Paoli is an associate professor at Università di Milano Bicocca; he received a laurea degree in Electronic Engineering, and a PhD in Computer Science from the Politecnico di Milano. His research interests include software engineering, programming languages, software architecture, and cooperative distributed systems. His main current activities deal with the definition of service-based models and architecture for the development of collaborative Web applications to support communities of interest, and quality-based development of service-based business processes. He is co-author of three books and several papers in international journals and conference proceedings.

Danny Dolev received his B.Sc. degree in mathematics and physics from the Hebrew University, Jerusalem in 1971. His M.Sc. thesis in Applied Mathematics was completed in 1973, at the Weizmann Institute of Science, Israel. His Ph.D. thesis was on Synchronization of Parallel Processors (1979). He
was a Post-Doctoral fellow at Stanford University, 1979-1981, and IBM Research Fellow 1981-1982. He joined the Hebrew University in 1982. From 1987 to 1993 he held a joint appointment as a professor at the Hebrew University and as a research staff member at the IBM Almaden Research Center. He is currently a professor at the Hebrew University of Jerusalem. His research interests are all aspects of distributed computing, fault tolerance, security and networking -- theory and practice.

**Marlon Dumas** is an Associated Professor at Queensland University of Technology and Fellow of the Queensland Government ("Smart State” Fellow). He received a PhD from University of Grenoble (France) in 2000. His research interests are in the areas of business process management, application integration and e-commerce technology.

**Paolo Falcarin** is research assistant in the Software Engineering Group at the Department of Computer Science and Automation of Politecnico di Torino, one of the leading engineering universities in Italy. He received his M.S. degree in Computer Science Engineering in 2000, and his PhD in Software Engineering, in 2004, from Politecnico di Torino.

**Stefan Fischer** is a full professor in computer science at the University of Lübeck, Germany, and the director of the Institute for Telematics. He got his diploma degree in “Wirtschaftsinformatik” and his doctoral degree from the University of Mannheim, Germany, in 1992 and 1996, respectively. After a postdoctoral year at the University of Montreal, Canada, he joined the newly founded International University in Germany, one of the first private universities in Germany, as an assistant professor in 1998. In 2001, he became an associate professor in computer science at the Braunschweig University of Technology, where he stayed until 2004, when he joined Lübeck University. His research interest is currently focused on new network and distributed system structures such as ad-hoc and sensor networks. He has (co-)authored about 100 scientific books and articles. Dr Fischer is a member of ACM, IEEE and the German Gesellschaft für Informatik (GI).

**Walid Gaaloul** is an assistant professor in TELECOM & Management SudParis. He was an adjunct lecturer in the National University of Ireland, Galway (NUIG) and a postdoctoral researcher at the Digital Enterprise Research Institute (DERI). He holds an M.S. (2002) and a Ph.D. (2006) in computer science from the University of Nancy-France. His research interests lie in the area of Business Process Management, Process intelligence, Process reliability, Service Oriented Computing and semantics for B2B Integration.

**Dennis Gannon** is a Professor of Computer Science and Science Director of Pervasive Technology Labs at Indiana University. His research interests include programming systems and tools, distributed computing, computer networks, parallel programming, computational science, problem solving environments and performance analysis of Grid and MPP systems. IEEE member.

**Carole Goble** is a Professor in the School of Computer Science in the University of Manchester. She is Director of the myGrid project, a software toolkit for Life Science services that has produced the Taverna workflow workbench, and pioneered the use of semantic web technologies for service management and provenance collection. She is technical director of the OntoGrid project, which has developed, S-OGSA, the first reference architecture for metadata management in Grid middleware. She
About the Contributors

is the current chair of the Open Middleware Infrastructure Institute UK (OMII-UK), which provides software and support for the UK e-Science community, including the prototyping of the myExperiment.org portal for sharing and reusing experiments on-line. Her research interests include Grid computing, the Semantic Grid, the Semantic Web, e-Science and Bioinformatics.

Claude Godart is full time Professor at Nancy University, France and scientific director of the INRIA ECOO project. His centre of interest concentrates on the consistency maintenance of the data mediating the cooperation between several partners. This encompasses advanced transaction models, user centric workflow and web services composition models. He has been implicated in several transfer projects with industries (France, Europe, and Japan) for a wide range of applications including e-commerce, software processes and e-learning.

Antoon Goderis received his undergraduate degree in Applied Economics from K.U. Leuven, Belgium, in 2000, the M.Sc. in Computer Science from University of Manchester, UK, in 2001, and the M.Sc. in Artificial Intelligence from the University of Edinburgh, UK, in 2003. He is finishing a Ph.D. in the School of Computer Science at the University of Manchester. His research interests are in workflow reuse, discovery and similarity, e-Science, the Semantic Web and Bioinformatics.

Silvan Tecumseh Golega is a master student at the Hasso-Platner-Institut of the Universität Potsdam, Germany. Silvan received a B.Sc. from the Hasso-Platner-Institut in 2006 after spending one year at the Universidad Rey Juan Carlos in Madrid, Spain. Silvan performed the practical work of his master thesis under the supervision of Frederic Montagut at SAP Research, France on the topic Composition and Coordination of Transactional Business Processes. He contributed to the work presented in this chapter during his stay at SAP Research.

Simone Grega is a young researcher at Università di Milano Bicocca; he received a laurea degree in Computer Science from the same University in 2006. His research interests include service-oriented methodologies, information systems and data quality. His main current activities deal with the definition of a service modeling design methodology to project Web service characterized by an high-level of quality (Quality of Service). Moreover, his activities deal with the definition of a methodology that allows the improvement of data quality by considering different types of information (structured, semi-structured and unstructured data). He is author of several papers in international journals and conference proceedings. He is currently working in the European IST project n. 27347 SEEMP (Single European Employment Market-Place) and in the Italian FIRB project RBNE0358YR eG4M (eGovernment for Mediterranean Countries). He was involved in European projects, part of the FP6 EU research program on service engineering, working on service creation technologies and service description languages. He was the program chair of the first Telecom Service Oriented Architectures Workshop (TSOA) in 2007. His current research interests include model driven engineering, service engineering, distributed systems.

Arthur ter Hofstede received his PhD in Computer Science from the University of Nijmegen in The Netherlands in 1993. Currently he works as an Associate Professor at the School of Information Systems of the Faculty of Information Technology of Queensland University of Technology in Brisbane, Australia. He is co-leader of the BPM group in the Faculty. His main research interests are in the
conceptual and formal foundations of workflow. He is committed to the Workflow Patterns Initiative (www.workflowpatterns.com) and the YAWL (Yet Another Workflow Language) Initiative (http://yawlfoundation.org/).

Dazhi Huang is a Ph.D. student in the Department of Computer Science and Engineering at Arizona State University. His research interests include middleware, mobile and ubiquitous computing, and workflow scheduling in service-oriented computing environments. He received his B.S. in computer science from Tsinghua University in China.

Hiroshi Igaki received the B.E. degree (2000) in Department of Electrical and Electronics Engineering from Kobe University, Japan, and the M.E. degree (2002) and D.E. degree (2005) in Information Science from Nara Institute of Science and Technology, Japan. From 2006 to 2007, he worked for Faculty of Mathematical Sciences and Information Engineering, Nanzan University, Japan. He is currently an Assistant Professor of Graduate School of Engineering at Kobe University. His research interests include communication support in software development, web services and service-oriented architecture. He is a member of the IEEE, ACM, IEICE and IPSJ.

Jaakko Kangasharju is a doctoral student at the University of Helsinki, and working as a researcher at the Helsinki Institute for Information Technology. His PhD dissertation focuses on enabling XML messaging and processing on mobile devices. He is currently a member of the Efficient XML Interchange Working Group at the World Wide Web Consortium.

Firat Kart received the Ph.D. degree in Electrical and Computer Engineering at the University of California, Santa Barbara. He received the B.S. degree in Computer Science from Bilkent University in Ankara, Turkey. Currently, he is a principal engineer / architect at Tibco in Palo Alto, California. His research interests include distributed systems, computer networks, Service Oriented Architectures, Web Services, database transactions, and supply chain and healthcare applications.

Oba Katsuya Oba received the Batchelor of Arts degree from Osaka University, Osaka, Japan, in 1989. He joined Osaka Gas Information System Research Institute Co., Ltd. (OGIS-R1) as a systems engineer. From 2000 to 2005, he worked for OGIS International, Inc. in Palo Alto, California as General Manager and leaded several software product development and R&D projects. He returned to OGIS-R1 in 2006, and is leading R&D and business development relating to Service Oriented Architecture (SOA). His research interests include software architecture, business and systems modeling and software development processes. He is a member of Information Processing Society of Japan.

Larry Korba is a Principal Research Officer with the National Research Council Canada. He is the Group Leader of the Information Security Group in the Institute for Information Technology (http://www.iit-iti.nrc-cnrc.gc.ca/) and involved in the research and development of security and privacy enhancing technologies for applications ranging from gaming to ad hoc wireless systems.

Leung is a Chartered Fellow of the British Computer Society, a Fellow of the Institute of Print-media Professionals, a Fellow of the Hong Kong Institutions of Engineer, a Fellow of the Hong Kong Computer Society, a Senior Member of the IEEE and IEEE Computer Society, and has been an Executive Commit-
About the Contributors

tee member (1990-1993), General Secretary (1994), Vice-Chair (1995-1997) and Chair (1998-1999), Past Chair since 2000, of the IEEE Hong Kong Section Computer Chapter. The Chapter won the IEEE Most Outstanding Computer Society Chapter Award in 1998. Dr. Leung is also a C.Eng., an Ir., a Chartered IT Professional, a RPE (Information), and a member of ACM and ACS.

Karl R.P.H. Leung is a Principal Lecturer in the Department of Information & Communications Technology at the Hong Kong Institute of Vocational Education (IVE) and the Director of the Compuware Software Testing Laboratory of IVE. Dr. Leung is also an Adjunct Professor of the University of Queensland, Australia and an Advisor of the Shunde Polytechnic, P.R. China, and an Advisor & Adjunct Professor of the Panyu Polytechnic, P.R. China. Dr. Leung is also a reviewer of many major journals and conferences and has participated in the organization of many major international conferences. His research areas include: Domain Modeling, Mission Critical Software Engineering Methodology, Secure Workflow Systems, Software Testing, Mobile Location Estimation, Ubiquitous & Location Based Systems and QoS of Video Streaming.

Peter Li gained a Masters in Research in Bioinformatics from the University of Leeds, UK in 2002. He is currently a Research Associate at the Manchester Interdisciplinary Building, University of Manchester, UK. His research focus is on the application of e-Science technologies in systems biology.

Yan Li is currently a Ph.D. candidate in software institute at Peking University, P.R. China. His current research interests include component-based software development, reuse repository and component retrieval.

Tancred Lindholm is a doctoral student at the Helsinki University of Technology, and working as a researcher at the Helsinki Institute for Information Technology. His research is concentrated on structured data access and synchronization on limited devices.

Ling Liu is an associate professor at the College of Computing at Georgia Tech. There, she directs the research programs in Distributed Data Intensive Systems Lab (DiSL), examining research issues and technical challenges in building large scale distributed computing systems that can grow without limits. Dr. Liu and the DiSL research group have been working on various aspects of distributed data intensive systems, ranging from distributed computing systems, enterprise systems to business workflow management systems. Prof. Liu has published more than 160 technical papers in the areas of Internet Computing systems, Internet data management, distributed systems, and information security. She is the recipient of best paper award of WWW 2004 and best paper award of IEEE ICDCS 2003, and a recipient of 2005 Pat Goldberg Memorial Best Paper Award. Her research group has produced a number of software systems that are either open sources or directly accessible online, among which the most popular ones are WebCQ and XWRAPElite. Dr. Liu is currently on the editorial board of several international journals, including IEEE Transactions on Knowledge and Data Engineering, International Journal of Very large Database systems (VLDBJ), International Journal of Web Services Research, and has chaired a number of conferences as a PC chair, a vice PC chair, or a general chair, including IEEE International Conference on Data Engineering (ICDE 2004, ICDE 2006, ICDE 2007), IEEE International Conference on Distributed Computing (ICDECS 2006), IEEE International Conference on Collaborative Computing (CollaborateCom 2005, 2006), IEEE International Conference on Web Services (ICWS 2004). She is a
About the Contributors

recipient of IBM Faculty Award (2003, 2006). Prof. Liu’s current research is partly sponsored by grants from NSF CISE CSR, ITR, CyberTrust, AFOSR, and IBM.

**Ken-ichi Matsumoto** received the BE, ME, and PhD degrees in Information and Computer sciences from Osaka University, Japan, in 1985, 1987, 1990, respectively. Dr. Matsumoto is currently a professor in the Graduate School of Information Science at Nara Institute of Science and Technology, Japan. His research interests include software metrics and measurement framework. He is a senior member of the IEEE, and a member of the ACM, IEICE, IPSJ and JSSST.

**Andrea Maurino** is a research associate at Università di Milano Bicocca. He received his laurea degree and PhD from the Politecnico di Milano; his research fields include orchestration of mobile information systems, methodologies for developing multichannel information systems, quality of web applications and data quality. He has published about 20 papers in international conferences and journals.

**Hong Mei** is currently a professor in the School of Electronics Engineering and Computer Science, Peking University, P.R. China. He received a Bachelor’s degree and a Master’s degree in Computer Science from Nanjing University of Aeronautics & Astronautics (NUAA) in 1984 and 1987 respectively, and a Doctorate degree in Computer Science from Shanghai Jiao Tong University in 1992. From 1987 to 1989, he was working at NUAA as a research assistant. In 1992, he joined in Peking University (PKU) as a post-doctoral research fellow. From 1994 to present, he was working at the Department of Computer Science and Technology and the School of Electronics Engineering and Computer Science in PKU, and became associate professor in 1994 and full professor in 1997. His current research interests include: Software Engineering and Software Engineering Environment, Software Reuse and Software Component Technology, Distributed Object Technology, Software Production Technology, and Programming Language.

**P. M. Melliar-Smith** is a professor in the Department of Electrical and Computer Engineering at the University of California, Santa Barbara. Previously, he worked as a research scientist at SRI International in Menlo Park. His research interests encompass the fields of distributed systems and applications, and network architectures and protocols. He has published more than 250 conference and journal papers in computer science and engineering. Dr. Melliar-Smith is a pioneer in the field of fault-tolerant distributed computing. He received the Ph.D. in Computer Science from the University of Cambridge, England.

**Refik Molva** is a full professor and the head of the Computer Communications Department at Eu- rectom Institute in Sophia Antipolis, France. His current research interests are in security protocols for self-organizing systems and privacy. He has been responsible for research projects on multicast and mobile network security, anonymity and intrusion detection. Beside security, he worked on distributed multimedia applications over high speed networks and on network interconnection. Prior to joining Eurecom, he worked as a Research Staff Member in the Zurich Research Laboratory of IBM where he was one of the key designers of the KryptoKnight security system. He also worked as a network security consultant in the IBM Consulting Group in 1997. Refik Molva has a Ph.D. in Computer Science from the Paul Sabatier University in Toulouse (1986) and a B.Sc. in Computer Science (1981) from Joseph Fourier University, Grenoble, France.
**About the Contributors**

**Frederic Montagut** is a Senior Researcher with SAP Research in Zurich, Switzerland. Frederic obtained his engineering diploma from Telecom INT, France, the Diploma of Advanced Studies (M.Sc.) in Network and Distributed Systems from Nice University, France in 2004 and a PhD in Computer Science from Telecom Paristech, France in 2007. He joined SAP Research in October 2004 as a PhD candidate working under the supervision of Pr Refik MOLVA, Eurecom Institute before moving to Switzerland. His research interests range from distributed workflow systems, workflow coordination to workflow security.

**Louise E. Moser** is a professor in the Department of Electrical and Computer Engineering at the University of California, Santa Barbara. Her research interests span the fields of computer networks, distributed systems and software engineering. Dr. Moser has authored or coauthored more than 250 conference and journal publications. She has served as an associate editor for the IEEE Transactions on Services Computing and the IEEE Transactions on Computers and as an area editor for IEEE Computer in the area of networks. She received the Ph.D. in Mathematics from the University of Wisconsin, Madison.

**Supratik Mukhopadhyay** has been an assistant professor of Computer Science at Utah State University since 2006. He received the Ph.D. degree in computer science at the Max Planck Institute Germany in 2001. During the year 2001-2002, he did postdoctoral research at the University of Pennsylvania, and was an Assistant Professor in computer science at West Virginia University. His research interests include formal methods for developing dependable systems.

**Masahide Nakamura** received the B.E., M.E., and Ph.D. degrees in Information and Computer Sciences from Osaka University, Japan, in 1994, 1996, 1999, respectively. From 1999 to 2000, he has been a post-doctoral fellow in SITE at University of Ottawa, Canada. He joined Cybermedia Center at Osaka University from 2000 to 2002. From 2002 to 2007, he worked for the Graduate School of Information Science at Nara Institute of Science and Technology, Japan. He is currently an associate professor in the Graduate School of Engineering at Kobe University. His research interests include the service-oriented architecture, Web services, the feature interaction problem, V&V techniques and software security. He is a member of the IEEE, ACM, IEICE, and IPSJ.

**Richi Nayak** is a senior lecturer in the School of Information System, Queensland University of Technology, Brisbane, Australia. Her research interests are data mining and Web intelligence. She has published over 50 papers in journals, conference proceedings and books. She has developed various innovative mining techniques and applications related to XML, Software Engineering, e-commerce, m-commerce and Web services.

**Krzysztof Ostrowski** is a Ph.D. candidate in the Computer Science department at Cornell University. He is currently building Live Distributed Objects, a new programming model and a platform, in which instances of distributed protocols are modeled as components with an object-oriented look and feel that can be composed in a type-safe manner to build complex distributed applications using a simple, intuitive drag and drop interface. Before joining Cornell, Krzys spent four years in the industry.
Chun Ouyang received her PhD in Computer Systems Engineering from the University of South Australia in 2004. She currently works as a post-doctoral research fellow at the Faculty of Information Technology in Queensland University of Technology, Australia. Her research interests are in the areas of workflow management, process modelling and analysis, Web services, Petri nets, and formal specification and verification.

Federica Paci is now a post-doctoral research associate at the Department of Information Engineering and Computer Science, Università degli Studi di Trento. From February 2008 to March 2009, Federica Paci was a post-doctoral research associate at Purdue University. Paci's main research interests include access control for service oriented architectures and for virtual organizations, digital identity management, and trust negotiations. Currently, she is exploring privacy issues in the context of social networks. Paci earned her Ph.D. in Computer Science from the University of Milan, Italy, in February 2008. In February 2004, she received the equivalent of a combined bachelor's/master's degree in Computer Science, also from the University of Milan. During Spring Semester of 2005 and 2006, Paci was a visiting research scholar at CS Department of Purdue University, West Lafayette, IN. Paci is the author or co-author of more than 10 conference chapters and journal articles. Currently, she is co-authoring a book on Web services security. She served as a program committee member for APWeb 2008, IEEE CollaborateCom 2008, WWW 2009 Poster Session and ICPS 2009.

Michael Pantazoglou is currently a Ph.D. student at the Department of Informatics and Telecommunications of the National and Kapodistrian University of Athens. He holds a diploma degree in Informatics and Telecommunications from the same institution. He joined the S3 Laboratory in 2004 as a research scientist. During the last 3 years, he has participated in the SODIUM and SeCSE research & development projects. His research interests include service-oriented technologies with focus on service discovery and composition, information retrieval, natural language processing, and data processing.

Beth Plale is an Associate Professor of Computer Science and Director of the Data Search Institute at Indiana University. Her research interest is in the broad area of large-scale data management, specifically stream mining and event processing, distributed metadata and integration, provenance, grid and service-oriented architectures, and petascale databases. IEEE member.

Calton Pu is the John P. Imlay Jr. Chair in Software at Georgia Tech. His research interests include operating systems, transaction processing, and Internet data management. Pu received a PhD in computer science from the University of Washington. He is a member of the ACM, a senior member of the IEEE, and a fellow of the AAAS. Contact him at calton@cc.gatech.edu.

Akhil Sahai is a senior research scientist at HP Laboratories and is currently researching the areas of policy management and resource utility architectures. He has in the recent past researched the areas of web service and business process management. Contact him at akhil.sahai@hp.com.

Krishna Shenai is professor and chair at the Electrical Engineering and Computer Science Department at University of Toledo. He has more than 300 papers in IEEE journals and conferences, 4 books, 10 book chapters, and 15 patents. He is an IEEE Fellow, an AAAS Fellow, an IETE (India) Fellow, and an IEEE Distinguished lecturer. Before joining academia in 1995, he has held leadership positions in
industry for 10 years (COMSAT, GE, Intel). He received his PhD. from Sanford University in electrical engineering in 1986.

**Yogesh L. Simmhan** is a doctoral candidate at Indiana University, working on distributed data and metadata management for large scale, data driven applications based on Grid and web-service paradigms. He is particularly interested in issues related to efficient provenance tracking, discovery, quality evaluation, and long term preservation of data generated from scientific workflows, with the overarching goal of building scalable information systems to effectively manage data end-to-end. IEEE member.

**Junichi Suzuki** received a Ph.D. in computer science from Keio University, Japan, in 2001. He joined the University of Massachusetts, Boston in 2004, where he is currently an Assistant Professor of computer science. From 2001 to 2004, he was with the School of Information and Computer Science, the University of California, Irvine (UCI), as a postdoctoral research fellow. Before joining UCI, he was with Object Management Group Japan, Inc., as Technical Director. His research interests include model-driven software development, autonomous adaptive distributed systems, biologically-inspired software adaptation and self-organizing sensor networks. He is an editor of International Journal of Software Patterns, International Journal of Software Architecture and International Journal of Software Reuse. He was the Program Co-Chair of the 2008 IEEE International Workshop on Methodologies for Non-functional Properties in Services Computing. He served on over 35 conference program committees, and served as a workshop co-chair for the ACM/IEEE/ICST/Create-Net BIONETICS 2007 conference. He is an active participant and contributor in the ISO SC7/WG19 and the Object Management Group, Super Distributed Objects SIG. He is a member of IEEE and ACM.

**Haruaki Tamada** received the B.E. and M.E. in Information and Communication Engineering from Kyoto Sangyo University, Japan in 1999, 2001. He received D.E. degree from information science from Nara Institute of Science and Technology, Japan in 2006. He is currently an assistant professor in Faculty of Computer Science and Engineering at Kyoto Sangyo University, Japan. His research interests include software security, software measurement. He is a member of the IEICE, IPSJ and IEEE.

**Akihiro Tanaka** received the B.E. in Information and Mathematical from Nara University of Education, Japan in 2005. He received M.E. degree from Nara Institute of Science and Technology, Japan in 2007. He is currently working for Hitachi, Ltd. His research interests include service oriented architecture, Web service, home network system, legacy appliances.

**Sasu Tarkoma** received his MSc and PhD degrees in Computer Science from the University of Helsinki, Department of Computer Science. He has managed and participated in national and international research projects at the University of Helsinki, Helsinki University of Technology, and Helsinki Institute for Information Technology. He has also lectured several courses on middleware and data communications. He has over 40 scientific publications and has also contributed to several books on mobile middleware. His research interests include middleware and distributed computing.

**Aphrodite Tsalgatidou** is a permanent member of the Academic Staff at the Department of Informatics and Telecommunications of the National and Kapodistrian University of Athens since 1999. She holds a diploma degree in Chemistry from the same institution and an M.Sc. and a Ph.D in Computer
Science from the University of Manchester, England. Previously she was with the Hellenic Telecom Organization and a Research Director in a private company. Aphrodite is the director of the S3 Laboratory (www.s3lab.com) which pursues research in service engineering, software engineering and software development; she has participated in and/or managed a large number of projects in these areas and has published relevant papers. Her current research focuses on service interoperability, service discovery and composition, peer to peer systems and business process management and interoperability.

Claudio Venezia is researcher at Telecom Italia Lab since 2002. He received a degree in Economics with an experimental addressing in computer science along with further computer science certifications from University of Turin (Italy) in July 1998. He worked for three years in Ernst and Young critical technologies in several domains (Banking, Automotive, and E-commerce). He has been contributing to standardization activities (JAIN-SLEE, W3C) and internal and international Projects. His research interests include enhanced SOA paradigms meshing up IT and telecom capabilities, (Semantic) Web Services technologies and XML-based languages towards Web 2.0.

Hiroshi Wada Hiroshi Wada received his M.S. degree in computer science from Keio University, Japan, in 2002. He started the Ph.D. program in the University of Massachusetts, Boston in 2005. His research interests include model-driven software development, and service oriented architecture. Before enrolling in the Ph.D. program, he worked for Object Technology Institute, Inc., and engaged in consulting and educational services in the field of object oriented technologies, distributed systems and software modeling.

Christian Werner is an assistant professor for Distributed Systems at the Institute of Telematics at the University of Lübeck, Germany. Before, he was a researcher at the Braunschweig University of Technology and at the L3S research lab in Hannover, Germany. He is author of two books, several book chapters and more than 20 publications in conference and workshop proceedings. He received his diploma (equivalent to Master Degree) from the Humboldt-University in Berlin in July 2002. He received a doctoral degree from the University of Lübeck in August 2006. His research activities are focused on efficient approaches for implementing service-oriented architectures and other Internet-based services. This includes technologies for enhancing web services performance, particularly XML compression techniques, enhancing services reliability for medical applications, using web services on resource-constrained devices as well as new methods for transmitting audio and video data with ultra-low delays in the Internet.

Qinyi Wu is a PhD student at Georgia Tech, where she is also a member of the Distributed Data Intensive Systems Lab in the university’s College of Computing. Her technical interests include workflows, transaction processing, and web services. She is a member of the IEEE. Contact her at qxw@cc.gatech.edu.

Bing Xie is currently an associate professor in the School of Electronics Engineering and Computer Science, Peking University, P.R. China. He received his Ph.D. degree in 1998. His current research interests include software engineering, component-based software development, formal methods and distributed systems.
About the Contributors

Stephen S. Yau is currently the director of Information Assurance Center and a professor in the Department of Computer Science and Engineering at Arizona State University, Tempe, Arizona, USA. He served as the chair of the department from 1994 to 2001. He was previously with the University of Florida, Gainesville and Northwestern University, Evanston, Illinois. He served as the president of the Computer Society of the IEEE (Institute of Electrical and Electronics Engineers) and the editor-in-chief of IEEE Computer magazine. His current research is in distributed and service-oriented computing, adaptive middleware, software engineering and trustworthy computing. He received the Ph.D. degree in electrical engineering from the University of Illinois, Urbana. He is a life fellow of the IEEE and a fellow of American Association for the Advancement of Science.

George O.M. Yee (www.georgeyee.ca) is a Senior Research Officer in the Information Security Group, Institute for Information Technology, National Research Council Canada (NRC). Prior to joining the NRC in late 2001, he spent over 20 years at Bell-Northern Research and Nortel Networks. George received his PhD (Electrical Engineering) from Carleton University, Ottawa, Canada, where he is currently an Adjunct Research Professor. He is on the Editorial Review Board of several journals and has published over 50 papers within the last five years. George is a Senior Member of IEEE, and member of ACM and Professional Engineers Ontario. His research interests include security and privacy for e-services, using software agents to enhance reliability, security, and privacy, and engineering software for reliability, security, and performance.

Jia Zhang is an Assistant Professor of Department of Computer Science at Northern Illinois University. Zhang co-authors the book titled “Services Computing”. She has published over 80 refereed journal articles, book chapters, and conference papers. Zhang is serving as Associate Editor of IEEE Transactions on Services Computing (TSC), International Journal of Web Services Research (JWSR), and the Advances in Web Services Research (AWSR) Book Series, IGI Global. She also serves on Editorial Board of IEEE IT Professional. Zhang serves as Program Vice Chair of IEEE International Conference on Web Services (ICWS 2009, 2008, 2007, & 2006). Her current research interests center around Services Computing, with a focus on QoS testing, data management, mobile learning, and collaborative learning. Zhang received her Ph.D. in Computer Science from University of Illinois at Chicago in 2000. She is a member of the IEEE.

Lu Zhang received the B.S. and the Ph.D. degrees in Computer Science both from Peking University, P.R. China. He was a postdoctoral researcher with the Department of Computer Science, the University of Liverpool. He is now an associate professor with the School of Electronics Engineering and Computer Science, Peking University, P.R. China. His current research interests include program comprehension, reverse engineering, component-based software development, software modeling, and software testing.

Wenbing Zhao received the Ph.D. degree in Electrical and Computer Engineering from the University of California, Santa Barbara, in 2002. Currently, he is an assistant professor in the Department of Electrical and Computer Engineering at Cleveland State University. His current research interests include distributed systems, computer networks, fault tolerance and security. In the past, he has conducted research in the fields of superconducting materials and quantum optics. Dr. Zhao has more than 60 academic publications.
Yanzhen Zou is currently a Ph.D. student of the School of Electronics Engineering and Computer Science of Peking University, P.R. China. Her current research interests include component-based software development, reuse repository, Web Services retrieval, Web Services trustworthiness assessment and trust management in service-oriented environments.
