About the Contributors

Carlos Ferran is an assistant professor of management information systems at The Pennsylvania State University in Great Valley. He received his DBA in MIS from Boston University, a graduate degree in MIS from Universidad Central de Venezuela, a Cum Laude Master in Finance, and a licentiate in management sciences (BS) from Universidad Metropolitana. Dr. Ferran has been a visiting professor at IESA (Venezuela), INALDE (Colombia), and IAE (Argentina). He worked in the software industry for 10 years, acted as an IT/IS consultant for more than 10 years, and held the position of CIO for an important financial group in Venezuela. Dr. Ferran has written two books and many academic articles. His research interests span technology-mediated communication (particularly videoconferencing), accounting information systems, knowledge management, and the digital divide. He serves on the editorial board of several academic journals and is currently the editor of the AIS journal Revista de la Asociación de Sistemas de Información para Latinoamérica y el Caribe.

Ricardo Salim is the chief software architect for Cautus Network Corporation. He has more than 25 years of experience in developing and implementing enterprise software solutions for small and mid-size companies. He has worked as a consultant in IT/IS to over a hundred companies and government institution in developing countries. Dr. Salim is a successful entrepreneur who has founded several successful IT/IS companies in various developing and developed countries. He holds a BS in computer science from Universidad Central de Venezuela and is currently a PhD candidate at the Universidad Autónoma de Barcelona in Spain.

Peter Best is an associate professor in the School of Accountancy at Queensland University of Technology (QUT) in Brisbane. He has held positions at the University of Queensland, Newcastle University, Adelaide University, and Flinders University. He has qualifications in accounting, operations research, and information technology. His PhD examined the feasibility of machine-independent audit trail analysis in large computer systems. His teaching, research, and consulting experience include electronic business intelligence and data mining (SAS), enterprise systems (SAP R/3), IT governance processes and measurement, information systems security (SAP R/3), computer-assisted audit techniques (SAS, ACL), knowledge-based systems, fraud detection, and audit trail analysis. Best has performed projects for the South Australian Council of Social Services, the Institute of Chartered Accountants in Australia, CPA Australia, the Information Systems Audit & Control Association, Coopers & Lybrand, the SAS Institute, the Department of Primary Industries (Qld), Hall Chadwick, Education Queensland,
William Buck, the Health Insurance Commission, CS Energy, SAP Australia, Royal Dutch Shell, and the University of New South Wales ATAX program for the Australian Taxation Office.

**Marianne Bradford** is an associate professor of accounting at North Carolina State University, where she teaches enterprise systems and accounting information systems in the College of Management. She holds a PhD from the University of Tennessee in accounting and is a CPA. Bradford has been published in numerous journals such as *Journal of Information Systems*, *Journal of Cost Management*, *International Journal of Accounting Information Systems*, and *Strategic Finance*. Her research interests include systems documentation issues and SOX, enterprise systems implementation issues, and outsourcing of information systems. She has worked with KPMG as an auditor, and as an assistant controller for a school. Her more recent experience is with Ernst and Young’s Technology and Security Risk Services group while on sabbatical from NC State.

**Esther Brainin** holds a PhD from the Technion—Israel Institute of Technology. She is an assistant professor in the Department of Behavioral Sciences at Ruppin Academic Center in Israel. Brainin focuses on the sociology of communication and information technology (CIT); her research interests include organizational change induced by information technologies, techniques for implementing IT successfully in organizations, and bridging the digital divide. She served as head of the Research Branch of the Department of Behavioral Sciences in the Israeli Defense Forces (IDF), and on the basis of her research, headed a forum for IT implementation in various IDF units. She is a member of the CIT section of the American Sociological Association and of the OCIS division of the Academy of Management.

**Ashley R. Davis** is a PhD candidate in the Terry College of Business at the University of Georgia. Her research interests include enterprise resource planning systems, open source business development, information technology impacts on agility, information technology infrastructure decisions, and service-oriented architecture. She is currently working on her dissertation focused on enterprise systems, information technology competence, and agility. Her work has been presented at an Academy of Management conference and published in the *Communications of the Association for Information Systems* journal. She has work experience in global ERP implementation, human resource configuration, EDI management, and small business management.

**Gert-Jan de Vreede** is Kayser distinguished professor in the Department of Information Systems & Quantitative Analysis at the University of Nebraska at Omaha, where he is director of the Institute for Collaboration Science. His research focuses on collaboration engineering, the theoretical foundations of (e)-collaboration, and the diffusion of collaboration technology. His articles have appeared in *Journal of Management Information Systems*, *Communications of the ACM*, *Communications of the AIS*, *Small Group Research*, *DataBase*, *Group Decision and Negotiation*, *Journal of Creativity and Innovation Management*, *International Journal of Technology and Management*, *Journal of Informatics Education and Research*, *Simulation & Gaming*, and *Simulation*.

**Angel Díaz** is currently a professor of operations and supply chain management and the director of the PhD program at the Instituto de Empresa Business School, Madrid. With extensive practical experience in operations, logistics and information technology as a consultant in industrial logistics, support manager for a metro system, and maintenance manager for a water supply system, he is the author of
three books and more than 50 other publications. His research has appeared in the *European Journal of Operations Research, International Journal of Logistics, International Journal of Simulation and Process Modeling, Supply Chain Forum*, and the proceedings of POMS and EurOMA. He holds a master’s degree form Cranfield University and a PhD from Maryland University.

**Kenneth Dick** is a senior research fellow at the University of Nebraska at Omaha. His interests include telecommunications, the systems needed to support heterogeneous networks, and regulations/standards. He has presented work at various classified and non-classified venues. His current research areas are network/protocol optimization and network security. He earned his PhD from the University of Nebraska–Lincoln.

**Robert S. Gingras** was most recently the CIO and VP of information technology for Muzak LLC, where he was responsible for enterprise information management, business systems, and infrastructure. His achievements in process innovation and technology enablement have been documented and presented in various industry forums and publications, and have generated numerous benefits to the companies he has worked with. Prior to Muzak, he was the CIO and director of process design for Cequent, a Trimas Company responsible for business system consolidation and process alignment; and director of e-commerce, architecture and technology in General Motors Corporation’s Global Customer Experience Group. In addition, he has held leadership positions for Snap-On Tools Incorporated, Allendale Insurance, Citizen’s Bank, and Payco American Corporation. He currently lives with his family in Charlotte, North Carolina.

**Paul Hawking** is a senior lecturer in the School of Information Systems in the Faculty of Business and Law at Victoria University, Melbourne, Australia. He is past chairperson of the SAP Australian User Group and is coordinator of Victoria University’s ERP Research Group. His research is primarily in the area of ERP systems and business intelligence, and the use of these systems by Australian companies. He has very strong links with industry which is reflected in his research and commissioned reports. He also has a very strong research history with numerous publications and presented to industry and academia on many occasions. He is one of Australia’s best-selling IT authors.

**Jonathan Hornby** is a director in worldwide marketing for performance management at SAS. He is a visionary and thought leader in the field of performance management and currently leads global marketing direction. His experience comes from a hands-on background within the UK banking sector, followed by extensive travel, dialogue, and collaboration with customers, management consultants, and respected thought leaders around the globe. He led the design and introduction of SAS’s solutions for strategy, cost, profitability, and risk management. Joining SAS in 1996, he brought 15 years of business experience from the banking sector, including activity-based management, process reengineering, performance analysis, and marketing.

**Deanna House** is currently working on her PhD in Information Systems at the University of Texas at Arlington. She holds a master’s degree in Management of Information Systems from the University of Nebraska at Omaha, where she completed her thesis on Global Enterprise Resources Planning/Human Resources Management Systems (ERP/HRMS) success factors. A few of her research interests include global software implementations, ERP/HRMS implementation success factors, and human resources information systems-related topics.
Claus Juhl-Christensen is a managing consultant at the EDB Group, an international consulting firm based in Denmark. He has extensive experience in managing large-scale SAP projects, mostly focusing on accounting processes.

Kai Kelzenberg is a research fellow in the Research Group on Electronic Business at RWTH Aachen University. He studied business administration at RWTH and majored in electronic business and international management. He is currently working on his PhD project; his main fields of research are implementation of ERP systems and project management.

Don Kerr is a senior lecturer of information systems at Griffith University. His research areas include factors influencing ERP implementations and intelligent decision support systems development, implementation, and evaluation. He has extensive industry experience and has been commissioned to do consultancies for industries such as dairying, cotton, and railways. Kerr has written 60 peer-reviewed publications and has obtained competitive research grants from the Australian Research Council and Dairy Australia. His PhD was multidisciplinary in nature in that it incorporated statistical and heuristics modeling with decision support development for the dairy industry. Kerr worked as a principal research scientist for the Queensland Department of Primary Industries prior to coming to Griffith in 2000.

Heinz D. Knoell is currently professor of IS in the German Department of IS, Marmara-University, Istanbul, Turkey. In 2004/2005, he was a visiting scholar at the UCLA Anderson Graduate School of Management. He is professor in information systems at the University of Lüneburg, Germany, and visiting professor at the School of Computing and Information Technology University of Wolverhampton, UK. He received his BSc, MSc, and PhD from the University of Muenster, Germany. He is a member of the AIS and the German Chapter of the ACM.

Lukas W.H. Kühl is a senior consultant at Exsigno Consulting, Dübendorf, Switzerland. He received his BSc from the University of Lueneburg and his MSc from the University of Wolverhampton, UK.

Roland W.A. Kühl is a senior consultant at the Steria-Mummert Consulting AG, Hamburg, Germany. He received is BSc from the University of Lueneburg and his MSc from the University of Wolverhampton, UK.

Vinod Kumar is a professor of technology, innovation, and operations management and a former director of the Sprott School of Business (1995-2005). He has published more than 150 articles in refereed journals and has been awarded Carleton University’s Scholarly Achievement Award twice and the Research Achievement Award three times. He has led several research projects funded by the Social Sciences and Humanities Research Council, the Natural Sciences and Engineering Research Council, Industry Canada, the Ontario Research and Development Challenge Fund, and several industry partners. He has won 12 best paper awards at prestigious conferences. He is on the editorial boards of two international journals. In addition, Kumar has also served on the board of governors and the senate for Carleton University, and on the board of the Ontario Research Network of E-Commerce.

Oswaldo Lorenzo is currently a professor of operations management and enterprise systems at Instituto de Empresa Business School, Madrid. He has participated in consulting projects related to
enterprise systems implementation and business process redesign. His research has been published in *Communications of the Association for Information Systems*, *International Journal of Simulation and Process Modeling*, *Revista Latinoamericana de Administración*, *Supply Chain Forum: An International Journal*, and the proceedings of EurOMA, AMCIS, POMS, and BALAS. He holds a PhD in industrial and business studies from Warwick Business School.

**Bharat Maheshwari** is a PhD candidate at the Sprott School of Business and author/coauthor of several peer-reviewed articles. He has more than 10 years of experience in the areas of information systems and operations management. He has led small engineering teams in industry and has been coordinating e-business research activities at the Sprott School of Business. He is currently the chair of the Operations Management Division of the 2007 ASAC Conference and is a key member of the Ontario Research Network of E-Commerce research team at Carleton University. With Dr. Vinod Kumar, he has completed numerous studies on issues and challenges facing organizations in adopting, implementing, and institutionalizing enterprise systems.

**Alok Mishra** is an associate professor of computer and software engineering at Atilim University, Ankara, Turkey. He holds a PhD in computer science (software engineering), in addition to dual masters in computer science & applications and human resource management. His areas of interest and research are software engineering, information system, information and knowledge management, and object-oriented analysis and design. He has extensive experience in distance and online education related to computers and management courses. He has published articles, book chapters, and book reviews related to software engineering and information system in refereed journals, books, and conferences including the *International Journal of Information Management*, *Government Information Quarterly*, *IET-Software, Behaviour and Information Technology*, *Public Personnel Management*, *European Journal of Engineering Education*, and the *International Journal of Information Technology and Management*.

**Robert Moreton** is a professor of computer science and dean of the School of Computing and Information Technology at the University of Wolverhampton, UK. He received his BA (Hons) from Exeter University and his Mtech in Computer Science from Brunel University. He is a member and fellow of the British Computer Society.

**Bruce Olshan** is global supply chain manager for E.I. du Pont de Nemours and Company. He has worked with DuPont for 20 years in many areas including operations, manufacturing, sales, and marketing. Olshan is a recognized expert in integrated business management, establishing and optimizing global supply chains, implementing ERP systems, and inventory management. Prior to becoming global supply manager, he was a global ERP champion and successfully led a global implementation for a multi-billion-dollar business. Olshan received a BS in mechanical engineering from The Pennsylvania State University.

**Maira Petrini** is a professor at the FGV-EAESP as of June 2000. Her research interests are business intelligence and corporate strategic planning. She has also worked as an IT consultant since 2001 and has published in major Brazilian journals.
Raili Pollanen is an assistant professor of accounting and a former accounting area coordinator (2001-2006) at the Sprott School of Business. She brings to the research team expertise in accounting, management control, and performance measurement systems in both private and public sectors. Her recent research has been funded by the Canadian Academic Accounting Association, the Canadian Institute of Chartered Accountants, and the Association of Canadian Financial Officers (formerly, APSFA). Her research has been published in several academic and professional journals, books, and conference proceedings. She is also an author or a coauthor of numerous professional reports and a textbook, Management Accounting (Canadian 6th edition, Thomson/Nelson, 2004). She served on the Public Sector Accounting Board task force that developed a statement of recommended performance reporting practices published in the PSA Handbook in 2006.

Denise Potosky is an associate professor of management and organization at Penn State Great Valley. She earned her PhD in industrial relations and human resources from Rutgers University. She teaches graduate courses in human resources management, leadership communication, and organizational behavior. Her research focuses on personnel staffing and the use of valid assessments to predict job performance, and she is a recognized expert regarding computerized and Web-based assessments. Her research also examines the interplay between individual characteristics and contextual factors that facilitate the emergence of leadership and performance outcomes in organizations. Potosky’s work has been published in leading academic journals, and she has worked as a consultant to several organizations.

Marlei Pozzebon is an associate professor at the HEC Montréal as of June 2002. Her research interests are the political and socio-cultural aspects of information technology implementation, the use of structuration theory and critical discourse analysis in the information systems field, business intelligence and the role of information technology in local development, and corporate social responsibility. Before joining HEC, she worked at three Brazilian universities. She has also worked as an IT consultant since 1995. Previously, professor Pozzebon worked as a systems analyst. She has published in the Journal of Management Studies, Organization Studies, Journal of Strategic Information Systems, and the Journal of Information Technology.

Kai Reimers is a professor of information systems at RWTH Aachen University, Germany. He earned a doctorate in economics from Wuppertal University and a venia legendi at Bremen University. He has published in the European Journal of Information Systems, Electronic Markets, Electronic Commerce Journal, Journal of Information Technology, Communications of the AIS, International Journal of IT Standards & Standardization Research, and the International Journal of Production Economics, among others. He authored or co-authored five books in the field of information systems. His main fields of research are inter-organizational systems, IT standardization, and implementation of large-scale information systems.

Pall Rikhardsson holds a masters degree and a PhD from the Aarhus School of Business in Denmark. He joined the Aarhus School of Business in 2000 after working seven years as a consultant for PricewaterhouseCoopers in its Global Risk Management Solutions Department. His teaching and main research interests lie within management accounting and management controlling, with a specific focus on the use, impacts, and benefits of information technology applications in those fields. Current research
projects include: (1) Impact of Information Technology on Accounting, (2) Impact of Sarbanes-Oxley on Internal Control in Danish Companies, and (3) Identifying the Corporate Cost of Occupational Accidents: An Activity-Based Analysis. Rikhardsson has published in international and national scientific journals and trade magazines, presented at conferences and workshops around the world, and is used as a consultant in various contexts. In 2006 he spent six months at the Queensland University of Technology researching corporate compliance and internal control. In 2007 he was teaching management accounting and accounting information systems at the undergraduate and graduate levels.

**Maha Shakir** is an assistant professor of information systems at Zayed University, UAE. Her primary research areas are information system strategy, strategic management of information systems, and the implementation of enterprise system applications (e.g., ERP, SCM, and CRM). Her current work involves studies of enterprise systems in the Arab Gulf Countries and e-procurement in the petroleum industry in the Middle East. Her publications appeared in the *University of Auckland Business Review, Journal of Cases on Information Technology, International Journal of Information Systems and Change Management, Journal of Decision Systems*, ERP edited books, a Laudon & Laudon MIS textbook, and several international IS conferences.

**Thomas Wagner** is currently a PhD candidate and research fellow in the Group on Electronic Business at RWTH Aachen University. He studied business administration and majored in electronic business, and technology and innovation management. His main fields of research are inter-organizational information systems and information management.

**Peter Wolcott** is an associate professor of management information systems at the University of Nebraska at Omaha. He has long-standing interests in the international dimensions of information technologies. His current research projects are in the areas of IT for development, municipal e-government, and the global diffusion of the Internet. His work has been published in *Communications of the ACM, IEEE Computer, Journal of the AIS, Communications of the AIS, The Information Society, The Journal of Data Warehousing*, and other journals and proceedings. He earned his PhD at the University of Arizona in business administration (management information systems) in 1993.
