About the Authors

James B. Pick is professor in the School of Business at the University of Redlands and former department chair of Management and Business and former chair of the Business School Faculty Assembly. He holds a BA from Northwestern University, a MS from Northern Illinois University, and a PhD from the University of California, Irvine. He is the author of eight books and 110 scientific papers and book chapters in the research areas of management information systems, geographic information systems, environmental systems, population, and urban studies. He has published in such journals as *Information and Management, Simulation, Journal of Global Information Technology Management, Journal of Information Technology Cases and Applications, Socio-Economic Planning Sciences, Demography, Social Science Journal*, and *Social Biology*. His awards include several for faculty distinguished teaching and research from the University of Redlands, Senior Fulbright scholar award for Mexico, Thunderbird Award from the Business Association for Latin American Studies, and outstanding alumnus award from Northern Illinois University. He serves on three journal editorial boards.

Anne Mims Adrian is a PhD student in Management Information Systems, Department of Management, at Auburn University. She also co-leads the information technology efforts of the Alabama Cooperative Extension System, Alabama Agricultural Experiment Station, and the College of Agriculture at Auburn University. She has published in regional agricultural economics journals and has presented papers at the American Agricultural Economics Association meetings and the International Conference of Computers in Agriculture.

Arthur W. Allaway is a professor of Marketing and the M. Thomas Collins faculty fellow in Marketing at the University of Alabama in Tuscaloosa. His research interests include new product development, business-to-business marketing, spatial diffusion, site and market area analysis, marketing models, and e-business/commerce strategy. Dr. Allaway is extensively published, including *Journal of Marketing, Journal of Retailing, Journal*
of Business Research, Growth and Change, Economic Geography, and the Research in Marketing series. While earning his doctorate at the University of Texas-Austin, Dr. Allaway trained with the pioneering David Huff on the application of spatial analysis to marketing. His business experience includes marketing research director for a large business-to-business manufacturer.

Luís Alfredo Amaral was born in 1960 and holds a PhD in Information Systems obtained at University of Minho in Portugal (1995). He is associate professor in the Department of Information Systems, the School of Engineering of University of Minho, where he teaches courses on information systems management and information systems planning for undergraduate and postgraduate degrees. He is also involved in research projects in the area of methodologies for organizational intervention activities such as: information systems management, information systems planning and information systems development. Other topics of interest are the adoption process of IT applications by organizations and the curricula for information systems professionals.

David K. Berkowitz is an associate professor of Marketing and director of the Center for the Management of Technology at the University of Alabama in Huntsville. He received his PhD in Marketing and Applied Statistics from the University of Alabama in Tuscaloosa. Dr. Berkowitz’s research is focused on the new product diffusion and adoption process, retailing site selection and performance, brand management and international marketing. He has published his research in many leading journals including the Journal of Retailing, Journal of Advertising, and Journal of Advertising Research. At UAH, Dr. Berkowitz teaches marketing high technology products, managing technology development, marketing management, and buyer behavior. Before receiving his PhD, Dr. Berkowitz worked for 12 years with Hallmark Cards.

Subhasish Dasgupta is an assistant professor of Information Systems in the School of Business and Public Management, The George Washington University in Washington, DC. He received his PhD from Baruch College, The City University of New York (CUNY), and an MBA and BS from the University of Calcutta, India. His current research interests are electronic commerce, information technology adoption and diffusion, and Internet-based simulations and games. He has published in journals such as European Journal of Information Systems, Decision Support Systems, Logistics Information Management, Journal of Global Information Management, Journal of Global Information Technology Management, Information Systems Management, Simulation and Gaming Journal and Electronic Markets: The International Journal of Electronic Commerce and Business Media. He has presented his work at numerous regional, national and international conferences.

Chris Dillard is a Masters of Science student in Management Information Systems in the Department of Management, Auburn University. He is also an agricultural program assistant with the Department of Agronomy and Soils in the College of Agriculture. Chris has been involved with the Auburn University Precision Agriculture Program since 1998.

Copyright © 2005, Idea Group Inc. Copying or distributing in print or electronic forms without written permission of Idea Group Inc. is prohibited.
His involvement with the Precision Agriculture Program includes researching various GPS and GIS technologies and disseminating that information to Alabama and other southeastern farmers.

Joseph R. Francica is editor-in-chief and general manager of *Directions Magazine*, the leading online publication for GIS and spatial information technology resources. He is also the principal of Geodezix Consulting, which provides GIS support and analysis to market research, retail, public organizations, and consumer goods firms. He previously served as editor of *Business Geographics Magazine* and in executive management positions with both Fortune 1000 and start-up firms. He received a bachelor’s in Geology (Rutgers University), a master’s degree in Earth Science (Dartmouth College), and an MBA (Southern Methodist University). He has written 100 articles and editorials on business, marketing, and GIS topics. He is the conference chair for the Location Technology and Business Intelligence Symposium.

Oliver Fritz received his degree and PhD in Theoretical Physics from the University of Basel (1991 and 1995, respectively). As a post-doctoral fellow at Rutherford Appleton Laboratory (Oxford, UK) and Paul Scherrer Institut (Villigen, Switzerland), he mainly worked on static and dynamic properties of unconventional and low-dimensional magnetic systems. Since joining ABB Corporate Research (Baden, Switzerland) in 1999 he is concerned with a variety of problems from the fields of physics and information technology. His special interests lie in modelling and simulation of dynamical systems, decentralised power generation and distribution, and new concepts for integrated software applications.

Kevin C. Gillen is a sixth year PhD student in Applied Economics at the Wharton School. He has more than 9 years of experience in developing econometric models. At Wharton, Mr. Gillen has developed multiple applications of statistical forecasting models to real estate, using GIS technology. Several of these applications have resulted in scholarly publications in the field of real estate economics. He is currently funded by a HUD Dissertation Grant and a Lincoln Land Institute Dissertation Grant to study the market for urban land. Prior to Wharton, Mr. Gillen worked for the U.S. Department of Housing and Urban Development’s Office of Federal Housing Enterprise Oversight (OFHEO) developing models of mortgage termination, and for the Federal Reserve analyzing the U.S. financial system. Mr. Gillen holds a BA in Economics and Mathematics (Canisius College) and has attended Georgetown University and Cambridge University (UK) on scholarship.

Richard P. Greene is an associate professor in the Department of Geography at Northern Illinois University (USA). Utilizing geographic information systems (GIS), global positioning systems (GPS), and remote sensing technologies, he is actively engaged in researching urban spatial structure. He has published in a variety of journals including *Landscape and Urban Planning*, *Forum of the Association of Arid Lands Studies*, *The Social Science Journal*, the *Annals of the American Academy of Political and Social*
Science, Urban Geography, and Economic Geography. He has taught a number of GIS workshops for the National Science Foundation's Chautauqua short course series on the topic of GIS and the urban environment. He is a member of the Association of American Geographers, Arid Lands Studies Association, the Western Social Science Association (WSSA), and is currently serving a 3-year term on the WSSA Executive Council.

Scott Griffith graduated with a Bachelor of Commerce (Honours) from the University of Manitoba (1998). During his studies in Winnipeg, he developed an information system to manage the raw-material collection logistics for Isobord Enterprises. Since his graduation Scott has assumed the role of vice president for Tell Us About Us, Inc., an international firm specializing in Web-enhanced customer feedback services. Scott currently works on business development and marketing for Tell Us About Us, Inc.

Gary Hackbart is an assistant professor of Management Information Systems at Iowa State University. His research interests include strategic applications of geographic and location-based technologies, electronic and mobile commerce, organizational memory, IT security, and IT and international relations. He has published in Information Systems Management, Information & Management and the Financial Times.

Brian N. Hilton received a PhD in Management Information Systems from Claremont Graduate University, School of Information Science. His current research interests lie in geographic information systems, spatial decision support systems, and open source software. His dissertation examines dynamic information system development using open source software and Web services for the development of an Internet-based spatial decision support system. He holds an MS in MIS (Claremont Graduate University) as well as a BA in Economics (Richard Stockton College of New Jersey). Dr. Hilton is currently a research associate at the Claremont Information and Technology Institute (CITI).

Thomas A. Horan serves as executive director of the Claremont Information and Technology Institute (CITI) and is an associate professor in the School of Information Science, Claremont Graduate University (CGU). As director of CITI, he is responsible for directing a wide range of applied technology research projects. His area of specialization is the development and deployment of advanced information technologies including geographic information systems. Prior to joining CGU, Dr. Horan was a senior fellow at George Mason University and a senior analyst at the U.S. General Accounting Office. Dr. Horan received both his master’s and doctoral degrees from the Claremont Graduate School.

Esperanza Huerta is a professor at the Instituto Tecnológico Autónomo de México. She received a PhD in Management Information Systems from Claremont Graduate University. Her research interests include the use of GIS technologies, the cognitive implications of Web site design, and the theoretical bases of Web-based learning. Her writing
has appeared in *Web-Based Education: Learning from Experience* and *Proceedings of the Americas Conference on Information Systems*.

**Suprasith Jarupathirun** is a PhD candidate in MIS at the University of Wisconsin-Milwaukee. His research focus is on the effectiveness of IS including DSS, SDSS, and expert systems. Suprasith has published several papers in proceedings of information systems conferences. Before joining the PhD program, he was a surveyor and made digital maps for several years in Thailand. He also served as a trainer in the use of survey instruments (e.g., GPS, Electronic Total Stations, Electronic Distance Meters, and Electronic and Optical Theodolites) as well as in the use of the mapping and designing software.

**Peter Keenan** has been a member of the Department of Management Information Systems at University College Dublin since 1990. Before joining UCD, he developed logistics and location software for a number of large Irish organisations. Currently his research interests include geographic information systems (GIS) in business, spatial decision support systems and the use of the Internet for decision support. He holds degrees from the National University of Ireland. These degrees include a Bachelor of Commerce (1984), a Master of Management Science (1985), and a PhD (2001).

**Paul Mask**, PhD, is a professor of Agronomy and Extension Specialist with the Department of Agronomy and Soils, Auburn University. He is recognized by NASA as the Alabama Space Grant Geospatial Extension Specialist. Paul is also the coordinator of the Precision Agriculture Program for Alabama, has conducted several grant programs pertaining to agricultural practices, and has published numerous extension publications in agriculture production journals.

**W. Lee Meeks** is a PhD candidate at The George Washington University in the Management Science Department of the School of Business and Public Management. His degrees include an MBA from The George Washington University and a BS from the U.S. Naval Academy. He works as a senior scientist within the Geospatial Systems Group of General Dynamics — Advanced Information Systems, located in Chantilly, VA. He has spent more than 7 years in the employ of or consulting to the National Imagery and Mapping Agency or its predecessor, the Defense Mapping Agency. His research interest is improving organizational decision-making through the innovative application of information technologies. His current focus is a data-centric view of the advances in geographical information systems as GIS and spatiotemporal data are applied to organizational decision-making. With Dr. Subhasish Dasgupta, he has in press, “Geospatial information utility: An estimation of the relevance of geospatial information to users” in *Decision Support Systems*. His previous publications have been for the National Imagery and Mapping Agency. He has presented at the Institute for Operations Research and Management Science (INFORMS) annual meeting.
Brian E. Mennecke is an associate professor of Management Information Systems in the College of Business at Iowa State University (USA). Dr. Mennecke earned his PhD at Indiana University in Management Information Systems and also holds master’s degrees in Geology and Business from Miami University. His research interests include mobile and electronic commerce, spatial technologies and location-based services, data visualization and support systems, technology-supported training, small group decision making, and collaborative technologies. He has previously published a book on mobile commerce and articles in academic and practitioner journals such as Management Information Systems Quarterly, the International Journal of Human-Computer Studies, the Journal of Management Information Systems, Organizational Behavior and Human Decision Processing, the Journal of Computer Information Systems, and Small Group Research.

Lisa D. Murphy is assistant professor of Management Information Systems (MIS) at the University of Alabama in Tuscaloosa. Her research interests include geographic technologies, communities of practice, digital documents, knowledge management, and systems analysis and design. While earning her doctorate in MIS at Indiana University, Dr. Murphy completed in a fellowship at Environmental Systems Research Institute, the largest maker of GIS software, and was also a founding officer of the GeoBusiness Association (now a part of the American Marketing Association). She has conducted several workshops on introducing geographic technologies to business school faculty. Prior to earning her doctorate, Dr. Murphy was a systems developer at Boeing and a marketing manager at Cessna Aircraft Company.

Celene Navarrete is a PhD student of Management Information Systems in the School of Information Science at Claremont Graduate University. She holds a bachelor’s degree in Information Systems from the University of Aguascalientes (Mexico). Her research interests include the evaluation of information technology programs and initiatives, e-government and geographic information systems.

Derrick J. Neufeld is a professor of Information Systems at the Richard Ivey School of Business, The University of Western Ontario (Canada). He holds a Bachelor of Commerce (Honours) from the University of Manitoba, a Certified Management Accounting designation from the Society of Management Accountants of Canada, and a PhD from the University of Western Ontario. Dr. Neufeld’s research centers on virtual work, and he is presently investigating phenomena such as remote work, leadership at a distance, and computer-mediated communication.

Julian J. Ray is an assistant professor in the School of Business at the University of Redlands. Dr. Ray holds a BA from the University of Reading, UK, and an MSc and PhD from the University of Tennessee. He specializes in the application of geographic information systems to business problems focusing on spatial logistics, location based services, and spatial information systems. Julian has been an active practitioner and entrepreneur, having developed software for commercial GIS companies as well as
founding two independent software companies. As a consultant and company founder, Julian has developed spatial information systems for a number of private, federal and state organizations including IBM, Intergraph Corp., The World Bank, Department of Defense, Department of Education, FEMA, FHWA and a number of state and local transportation agencies.

**Terry Ryan** serves as associate professor in the School of Information Science at Claremont Graduate University. He earned a PhD in Management Information Systems from Indiana University. He conducts research on the design, development, and evaluation of IS applications to support training and education, customer service, and government. He has published articles in *Communications of the AIS, Data Base, Information & Management, Interface, International Journal of Human Computer Studies, Journal of Computer Information Systems, Journal of Database Management Systems, Electronic Journal of Information Systems Evaluation*, and *Journal of System Management*.

**Maribel Yasmina Santos** is an assistant professor in the Information Systems Department at the University of Minho in Portugal. She has a degree in Informatics and Systems Engineering from the University of Minho (1991), an MSc in Informatics and a PhD in Information Systems and Technologies, both from University of Minho (1996 and 2001, respectively). Her research interests include business intelligence, data mining, geographic information systems, spatial reasoning and space models.

**Petter Skerfving** received his degree in Computer Science from the Lund Institute of Technology (Lund, Sweden) in 1996. Having worked with software design and implementation at SAAB Combitech Innovative Vision (Linköping, Sweden) and software design processes and software process improvement at Q-Labs (Lund, Sweden and Kaiserslautern, Germany), he joined ABB Power Automation (Baden, Switzerland) in 2000. As head of the software development group “System Tools and Applications,” Mr Skerfving has concerned himself mainly with software architecture design, and system integration issues.

**John C. Stager** is an IT consultant and a PhD student in the School of Information Science at Claremont Graduate University. He is conducting research in the use of technology to support group collaboration. Additionally, he has been an information science practitioner for the last three decades. He is a member of the Association of American Geographers, the Association for Information Systems, the Western Social Science Association (WSSA), and is currently serving as the section coordinator for geography in the WSSA.

**Michelle M. Thompson** is a real estate education consultant focusing on community development and geographic information systems. Currently, Michelle works with the Lincoln Institute of Land Policy providing course development and valuation research
Michelle recently taught ArcGIS8.2: Introduction to GIS in the Cornell University City & Regional Planning Department. As Principal of Thompson (RE) Appraisal and a licensed residential appraiser, Michelle performed fee appraisal services in Massachusetts (1992-1996). Michelle received a BA (1982) in Policy Studies from Syracuse University, a Masters of Regional Planning (1984) and a PhD (2001) from the City & Regional Planning Department at Cornell University.

**Benjisu Tulu** is currently a doctoral student in Management Information Systems at Claremont Graduate University, School of Information Science. Her current research interests lie in computer security, medical informatics, and geographic information systems. She is currently working on secure video conferencing and digital signatures in the health care domain. Ms. Tulu holds an MS in MIS (Claremont Graduate University) as well as a BS in Mathematics (Middle East Technical University, Turkey). Ms. Tulu is currently a research associate at the Network Convergent Lab at Claremont Graduate University.

**Nanda K. Viswanathan** is associate professor of Marketing and chair of the Department of Management, in the School of Management, Delaware State University. His research interests are focused in the areas of GIS, competitive theory, consumption, and branding. Prior to teaching at Delaware State University, Dr. Viswanathan taught at the University of California, Riverside and the University of Redlands. Dr. Viswanathan’s research has been published and is forthcoming in journals and conference proceedings, including *Socio-Economic Planning Sciences, Social Science Journal, Academy of Marketing Science, Midwest Academy of International Business, and Global Information Technology Management Proceedings*.

**Susan Wachter** is Richard B. Worley professor of Financial Management and professor of Real Estate and Finance at The Wharton School at the University of Pennsylvania. Dr. Wachter served as assistant secretary for Policy Development and Research at HUD, a President appointed and Senate confirmed position, from 1998 to 2001, and was principal advisor to the Secretary responsible for national housing and urban policy. The Chairperson of the Wharton Real Estate Department from 1996 to 1998, Wachter is the author of more than 100 publications. Wachter served as president of the American Real Estate and Urban Economics Association and coeditor of *Real Estate Economics*, and currently serves on multiple editorial boards, and is visiting fellow at Brookings Institution and Fellow of the Urban Land Institute.

**Fatemeh “Mariam” Zahedi** is Wisconsin distinguished professor, MIS Area in the School of Business, at the University of Wisconsin-Milwaukee. She received her doctoral degree from Indiana University. Her present areas of research include IS quality and satisfaction, DSS, e-commerce and Web interface design, intelligent interface, IS design (for components, health networks, and maintenance), and policy and decision analysis. She has published more than 40 papers in major refereed journals, including: *MIS Quarterly, Information Systems Research, Decision Sciences, IEEE Transactions...*
