About the Contributors

**Jatinder (Jeet) N. D. Gupta** is currently eminent scholar of management of technology, professor of management information systems, industrial and systems engineering and engineering management at The University of Alabama in Huntsville, Huntsville, Alabama. Most recently, he was professor of management, information and communication sciences, and industry and technology at Ball State University, Muncie, Indiana. He holds a PhD in industrial engineering (with specialization in production management and information systems) from Texas Tech University. Co-author of a textbook in *Operations Research*, Dr. Gupta serves on the editorial boards of several national and international journals. Recipient of the Outstanding Faculty and Outstanding Researcher awards from Ball State University, he has published numerous papers in such journals as *Journal of Management Information Systems*, *International Journal of Information Management*, *Operations Research*, *INFORMS Journal of Computing*, *Annals of Operations Research*, and *Mathematics of Operations Research*. More recently, he served as a co-editor of several special issues including the *Neural Networks in Business of Computers and Operations Research*, *Semiconductor Wafer Production*, special issue of *Production Planning and Control*, *Building and Evaluation of Intelligent Decision Making Support Systems: Special Issue of Journal of Decision Systems*. He co-edited books that included *Decision Making Support Systems: Achievements and Challenges for the New Decade* and *Creating Knowledge-based Healthcare Organizations* published by Idea Group Publishing. He is also the coeditor of the book: *Managing E-Business* published by Heidelberg Press, Heidelberg, Australia and the book: *Intelligent Decision-making Support Systems*, published by Springer. His current research interests include information security, e-commerce, supply chain management, information and decision technologies, scheduling, planning and control, organizational learning and effectiveness, systems education, knowledge management, and enterprise integration. Dr. Gupta has held elected and appointed positions in several academic and professional societies including the Association for Information Systems, Production and Operations Management Society (POMS), the Decision Sciences Institute (DSI), and the Information Resources Management Association (IRMA).

**Sushil K. Sharma** is a professor of information systems and operations management at Ball State University, Muncie, Indiana, USA. Co-author of two textbooks and co-editor of four books, Dr. Sharma has authored over 100 refereed research papers in many peer-reviewed national and international MIS and management journals, conferences proceedings and books. He serves on editorial boards of several national and international journals and has also edited special issues. His primary teaching and research interests are in e-commerce, computer-mediated communications, community and social informatics, information systems security, e-government, ERP systems, database management systems, cluster computing, web services and knowledge management. He has a wide consulting experience in information systems and e-commerce and has served as an advisor and consultant to several government and private organizations including projects funded by the World Bank.

About the Contributors

Abdelkader Aissioui is a network systems engineer. He got his engineering degree at the Houari Boumèdienne University of Science and Technology, Algeria in 2004 and his master degree in computer science, speciality “distributed applications” from Lille University (USTL), France in 2006. Mr. Aissioui’s primary areas of interest include distributed applications, network security and systems.

Wasim A Al-Hamdani now is associated professor at KSU, Department of Computer Science; was working at University of Technology (Baghdad 1985-1999) then he taught in many different universities in different countries. Al-Hamdani supervises the establishing of Master and PhD programs in computer sciences, computer security, information security and cryptography programs at different universes; He supervises many MSc and PhD projects. He published six texts concerning computer science, cryptography and information security. His major works and research for last 17 years are cryptography algorithms and information security.

Gaeil An received an MS and PhD in computer engineering from Chung-Nam National University in South Korea, in 1995 and 2001, respectively. He has been working as a senior engineer at ETRI (Electrics and Telecommunications Research Institute) in South Korea since 2001. Currently, He works at the Laboratory for Applied Information Security (LAIST) at the School of Information Studies of Syracuse University as a visiting researcher. His primary research interests cover network security, traffic engineering, policy-based network management, network simulation, and P2P network security.

Carlo Bellettini works as an associate professor at Università degli Studi di Milano, Italy (Department of Computer Science and Communication) since 2002. He holds a PhD in computer science from Università degli Studi di Milano, Italy (1998) and a laurea degree in electronic engineering from Politecnico di Milano, Italy (1992). His research interests include real-time systems, with particular reference to analysis of specification in high level Petri nets, object-oriented design approaches and object-oriented component reusability, network security and performance evaluation of computer systems and networks.

Belaid Benhamou works in the position of “Maître de conférences” at University of Provence Aix-Marseille I (France), since 1995. He got his PhD at the University of Provence in 1993 and his “Habilitation” in 2001. He is a pioneer in symmetry reasoning in constraints, he is the head of the group working on symmetry in Marseille. He belongs to the artificial intelligence community, his domains of interest are: symmetry in constraints, satisfiability, constraints satisfaction problems, automated reasoning and deduction, Logics, revision and fusion, temporal and spatial reasoning, Meta-heuristics and optimization problems. He advised several PHD students on the previous topics and had been involved in different international scientific events.

Christopher M. Botelho is a security analyst with a major U.S. retail company. He received his BSBA in computer information systems from Appalachian State University. Currently, he is responsible for managing the company’s security information management systems; maintaining the two-factor authentication infrastructure; administering and maintaining the ethernet and wireless intrusion detection and prevention systems; and supporting and running the company’s vulnerability assessment tools. He also is responsible for ensuring network systems adhere to PCI compliance standards.

Dalila Boughaci holds a Bachelor of Engineering degree in computer science from Algiers University and an MS degree in computer science from the University of Sciences and Technology, Beb-Ezzouar, Algiers in 1997 and 2001, respectively. Boughaci’s current research interests are in the areas of network security, evolutionary computation, satisfiability problem, meta-heuristics, multi-agent systems and e-commerce. She has published some papers on these research topics in journals and conferences and directed some BS and MS students’ projects. Boughaci has taught algorithmic, software engineering, databases and programming languages at Algiers, and served on some programme committees. Boughaci is member of the LRIA Artificial Intelligence Laboratory at the University of Algiers and the LSIS Laboratory at the University of Provence in Marseille.
About the Contributors

Carol C. Burt is president and CEO of 2AB, a specialist in providing trusted distributed software solutions. Carol has been working in the development of software solutions for trusted distributed computing for over thirty years. At 2AB, she oversees the design and development of the orb2 (CORBA technology) and the iLock security (Trusted Infrastructure) product suites. Carol has held numerous leadership positions in the Object Management Group (OMG) community and participates in distributed component technology research as an adjunct research professor at the University of Alabama Birmingham (UAB).

Joseph A. Cazier is an assistant professor in the Department of Computer Information Systems, John A. Walker College of Business, Appalachian State University. He received his PhD from Arizona State University in Boone North Carolina. He actively does research in information security, trust and ethics. Dr. Cazier has also published in Information & Management, the Journal of Information System Security, Information Systems Security: The (ISC)2 Journal and the Journal of Information Privacy and Security, among others. He has also published a book relating to business ethics and privacy, Value Congruence and Trust Online: Their Impact on Privacy and Price Premiums.

Amita Goyal Chin is an associate professor in the Information Systems Department at Virginia Commonwealth University. She received her BS in computer science and MS and PhD in information systems, all from The University of Maryland at College Park. Her research focuses primarily on database technology and its applications in information systems. She has investigating new approaches in data models for text representation and document databases, for this area may contribute to information delivery vehicles beyond the World Wide Web. She is also pursuing innovative solutions for managing data quality in database systems. Additionally, Dr. Chin has combined her information technology experience with her classroom skills to experiment with new teaching technologies and methodologies.

Tom Clark is a resident SAN evangelist for Brocade, and represents Brocade in industry associations, conducts seminars and tutorials at conferences and trade shows, promotes Brocade storage networking solutions, and acts as a customer liaison. A noted author and industry advocate of storage networking technology, he is a board member of the Storage Networking Industry Association (SNIA) and has held chair positions for SNIA customer initiatives and the SNIA Interoperability Committee. Clark has published hundreds of articles and white papers on storage networking and is the author of Designing Storage Area Networks, Second Edition (Addison-Wesley 2003) and IP SANs: A Guide to iSCSI, iFCP and FCIP Protocols for Storage Area Networks (Addison-Wesley 2001), and Storage Virtualization: Technologies for Simplifying Data Storage and Management (Addison-Wesley 2005).

Tom Coffey is professor of electronic and computer engineering at the University of Limerick, Ireland. He is director of the Data Communication Security Laboratory, University of Limerick. He is a chartered engineer; he holds masters and doctoral degrees from City University (London) and University of Ulster (Ireland) respectively. His research interests include protocol engineering, encryption algorithms, network security, modal logics, verification of security protocols and power-line communication systems.

Sue A. Conger has a BS in psychology from Ohio State University, an MBA in finance and cost accounting from Rutgers University, and a PhD in computer information systems from the Stern School of Management at New York University. She is the author of two books, The New Software Engineering, 1994; and Planning and Designing Effective Web Sites (with Richard O. Mason), 1997, and is currently at work on Process Mapping & Management. Dr. Conger’s research interests are ethics and IT and innovative uses of IT. She is currently on the faculty of University of Dallas where she manages both information technology and IT service management programs.

Wm. Arthur Conklin has been involved in the information security arena for years, with experience in the U.S. military, academia and in industry in the financial services sector. Co-author of three textbooks on information security, and author of numerical academic papers, Dr. Conklin has done extensive research into secure software development practices .Formerly the technical director of the Center for Infrastructure Assurance and Security
about the Contributors

at the University of Texas in San Antonio, Dr. Conklin is currently on the faculty of the University of Houston, in the College of Technology.

**Alex Crespi** earned an MS in computer science from Indiana University-Purdue University at Indianapolis in 2005 and received the Gersting Award as the outstanding graduate student in computer science. His research for the UniFrame framework, supported by the Office of Naval Research, examined security as a quality of service issue in distributed computing systems and focused on modeling and predicting system behavior with respect to access control characteristics.

**John D’Arcy** is an assistant professor in the Department of Management at the University of Notre Dame. He holds a PhD in management information systems from Temple University. Dr. D'Arcy’s research interests include information assurance and security, computer ethics, and system analysis and design. His research has been published in journals such as *Communications of the ACM, Decision Support Systems,* and *Computers & Security.*

**Reiner Dojen** is currently employed as junior lecturer at the Department of Electronic and Computer Engineering at the University of Limerick in Ireland. Received title of Diplom-Ingenieur (FH) from the University of Applied Sciences Osnabrück, Germany, in 1999, Master of Engineering in 2000 and PhD in 2004, both from University of Limerick, Ireland. Past employment includes software design engineer at S.u.S.E. Linux in Nürnberg, Germany, software design engineer at University of Applied Sciences Osnabrück, Germany and assistant teacher at University of Limerick. Research interests are: cryptography, security protocols, encryption algorithms, data and network security, automated theorem proving, artificial intelligence.

**Habiba Drias** is professor of computer science and the general director of National Institute of Education in Computer Sciences – INI, Algiers, Algeria. Dr. Drias has received his MS degree in computer science from Case Western Reserve University, Cleveland, OHIO, USA in 1984. She earned her PhD degree in computer science from Algiers University of Science and Technology USTHB in 1993, prepared at the Paris6 University from 1988 to 1992. Dr. Drias has taught compiling, architecture, operating systems, computational complexity, problem solving, multi-agent systems at Algiers, Paris and Toulouse, France. Dr. Drias’s research interests include the satisfiability problem, computational complexity, meta-heuristics, multi-agent systems, and ecommerce. Professor Drias has published over 40 papers on these research topics in journals and conferences and directed over a hundred BS and MS students projects and thesis.

**Arjan Durresi** is an associate professor in the Department of Computer and Information Science at Indiana University Purdue University Indianapolis. Prior to this appointment he held roles as assistant professor at LSU, research scientist of computer science and adjunct professor of electrical and computer engineering at The Ohio State University. His research centers on network architectures, telecommunications, wireless, and security, with emphasis on heterogeneous wireless networks, computer and network security, congestion control, traffic management, optical networks, grid computing, quality of service, satellite networks, and performance testing. He has published over fifty articles in journals and eighty in conference proceedings, and seven book chapters in the above areas. His research has also been funded by NSF, the States of Ohio and Louisiana, as well as university and industry sources.

**Raimund Ege** has over 20 years of experience in academia being a researcher, teacher in computer science, as well as an administrator. His extensive publication list ranges from object-oriented topics to software engineering and computer and information systems security. Most recently he has served as a director of the Secure System Architecture Laboratory at Florida International University where he and his team pursued his research topics such as secure access models, architectures for secure multi-media delivery, secure VOIP technologies and protocols and agent-based security enforcement frameworks. He has written/edited several books and chaired several international conferences such as the international conference on Technology of Object-Oriented Languages...
About the Contributors

and Systems (TOOLS). He is currently the chair of the Department of Computer Science at Northern Illinois University where he has established a graduate certificate on CyberSecurity.

Bill Friedman currently holds the rank of associate professor of information systems at the University of Central Arkansas. His first undergraduate degree was a BHL from Gratz College in Philadelphia, followed by a BA and MA from the University of Pennsylvania, concentrating in logic. After earning a PhD from the University of Virginia and teaching philosophy, he retooled in information systems at Virginia Commonwealth University. In this totally new area he engaged in expert systems consulting and teaching information systems. Most of his research concerns where management principles intersect with computer practice, such as, systems development and decision theory.

Arif Ghafoor is currently a professor in the School of Electrical and Computer Engineering, at Purdue University, West Lafayette, IN and is the director of Distributed Multimedia Systems Laboratory and Information Infrastructure Security Research Laboratory. He has been actively engaged in research areas related to database security, parallel and distributed computing, and multimedia information systems and has published over 175 papers in these areas. His research has been funded by various government and private organizations, including the U.S. Dept. of Defense, the National Science Foundation, NYNEX Corporation, AT&T Foundation, IBM, Intel Corp., Siemens Research Corporation, Cisco, Fuji Electric Company of Japan, and Boeing. Dr. Ghafoor has served on the editorial boards of various journals and the International Journal of Computer Networks. He has served as a Guest/Co-Guest Editor for various special issues of numerous journals including ACM/Springer Multimedia Systems Journal, the Journal of Parallel and Distributed Computing, International Journal on Multimedia Tools and Applications, IEEE Journal on the Selected Areas in Communications and IEEE Transactions on Knowledge and Data Engineering. He has co-edited a book entitled Multimedia Document Systems in Perspectives and has coauthored a book entitled Semantic Models for Multimedia Database Searching and Browsing (Kluwer Academic Publishers, 2000). He has been invited frequently to give seminars and tutorials at various leading IEEE and ACM conferences, including several keynote speeches. He has received the IEEE Computer Society 2000 Technical Achievement Award for his research contributions in the area of multimedia systems.

Yvette Ghormley is an associate professor in the business and computer information systems departments at Saint Leo University, Norfolk, VA. Her research interests include networks, enterprise security, database management, and e-business, as well as the role of entrepreneurship as a career option for people with disabilities. She earned an MA in education and human development in 1999 from George Washington University and a PhD in 2001 from Capella University in business, concentrating in organization and management and e-business. She continued at Capella University to obtain a MS in information technology, information security in 2006. She consults and widely lectures in the information security field and entrepreneurship opportunities or those with disabilities.

Erik Graham, CISSP-ISSAP, is the information security manager for General Dynamics C4 Systems, where he is responsible for protecting the confidentiality, integrity, and availability of General Dynamics’ information assets from a wide range of threats. Graham has a Bachelor of Science from the University of Phoenix and holds multiple industry certifications. He has been working in the computer security field for over 17 years. During this time he has worked on a wide variety of security topics to include security policies, penetration testing, risk assessment and mitigation, public key infrastructure, investigations, forensics, intrusion detection, and physical security.

David T. Green is an assistant professor of information systems at Morehead State University. He received his PhD from Southern Illinois University at Carbondale. His research has been published in the Journal of Computer Systems and the International Journal of Marketing and Electronic Retailing as well as the Proceedings of the Hawaii International Conference on System Sciences, the Americas Conference on Information Systems, and the Annual Meeting of the Decision Sciences Institute. His current research interests are in the areas of information security, human-computer interaction, and enterprise systems implementation.
Ajay Gupta is a CISSP-certified information security professional with over 12 years experience in information technology, cyber security and management consulting. Mr. Gupta has been involved in professional projects for local and global corporations, government agencies, and non-profits at both the hands-on and management level. Mr. Gupta is often invited to speak on IT and Management related topics by public and private organizations across the globe, such as ASIS International, the Government of Hong Kong, the University of Maryland, College Park, and EDUCAUSE. He also serves on and chairs many security and industry-related associations and working groups. He serves as the chair of both the Maryland Community College Technology Advisory Board Security SIG and the Prince George’s County, MD Interagency Technology Council Security SIG. Mr. Gupta also chaired MD Governor Martin O’Malley’s IT Security and Data Privacy Transition Team Work Group. His past positions include serving as a senior information security consultant for Deloitte & Touche and Ernst & Young. In addition to his professional positions, Mr. Gupta has faculty appointments in the area of information security and data forensics at Golden Gate University, Champlain College, as well as Prince George’s Community College. Mr. Gupta has published numerous security articles, and also authored authored both, Hack I.T. – Security through Penetration Testing, published in February 2002, and Defend I.T. – Security by Example, published in May 2004, discussing case studies of security projects ranging from disaster recovery to implementing intrusion detection systems, developing security policy to securing an 802.11 wireless communications network. He has an MBA from Georgetown University, as well as both a Bachelor’s and Master’s degrees in electrical engineering from the University of Maryland, College Park.

Manish Gupta is an information security professional in M&T Bank, Buffalo and also a PhD candidate at State University of New York, Buffalo. He has more than a decade of industry experience in information systems, policies and technologies. He has published 3 books in the area of information security and assurance (2 forthcoming). He has published more than 20 research articles in leading journals, conference proceedings and books including DSS, ACM Transactions, IEEE and JOEUC. He serves in editorial boards of 4 International Journals and has served in program committees of several international conferences. He holds several professional designations including CISSP, CISA, CISM, ISSPCS and PMP. He is member of ACM, IEEE, INFORMS, APWG, ISACA and ISC2.

Ahsan Habib is currently working as an innovator in Siemens Technology-To-Business Center at Berkeley. Before joining Siemens, he was a postdoctoral researcher in the School of Information Management and Systems (SIMS), University of California at Berkeley, where he worked in the areas of peer-to-peer networking, network economics, multihoming, and next generation network architecture. His research interests also include network security, network monitoring, quality of service, and distributed systems. He received his PhD from the Department of Computer Sciences at Purdue University in August 2003. He received a MS from the Department of Computer Science at Virginia Tech in 1999, and a BSc from Department of Computer Science and Engineering at Bangladesh University of Engineering and Technology (BUET) in 1996.

Britta Harrison is an experienced consultant in the Accenture Global Technology Consulting group. She has over 4 years of experience in SAP security and application controls. She has lead full-lifecycle SAP implementation, upgrades, and various security and control process re-designs. She has experience with Sarbanes Oxley (SOX) compliance and 3rd party segregation of duties (SOD) tool implementation and remediation. Harrison has a MBA from Syracuse University and a MS in information systems and decision science from Louisiana State University.

Anat Hovav is currently a visiting professor at Korea University Business School in Seoul, South Korea. She also taught at Temple University, University of Southern California, and Cal-Poly. Her research interests include electronic publishing, Internet standards adoption, risk assessment, and Internet security. Dr. Hovav holds a PhD in management information systems from Claremont University. She also has over 15 years of industry experience in information systems management and strategic planning. Dr. Hovav has published articles in journals such as Communications of the ACM, Information Systems Journal (ISJ), Information Systems Frontiers (ISF), and Communications of the AIS (CAIS).
About the Contributors

Kapp L. Johnson, Esq., is a senior lecturer in law and rthics in the School of Business at California Lutheran University. His practice focused on business transactions, litigation and governance. He is member of the California Bar Association whose teaching and research interests include law and economics, business ethics and the legal environment of business.

Deepak Khazanchi is professor of information systems & quantitative analysis and associate dean in The Peter Kiewit Institute’s College of Information Science & Technology at the University of Nebraska at Omaha (UNO). His current research and teaching interests are focused in the areas of B2B risk analysis in extended enterprise environments, information availability, virtual project management, and project management best practices. His research has been published in various peer-reviewed journals and national/international conference proceedings. Deepak currently serves as the President of the Midwest United States Association for Information Systems (MWAIS) and Founding Chair of the Association for Information Systems (AIS) Special Interest Group for IT Project Management (http://www.SIGITProjMgmt.org).

Jillian Lando’s academic career started in 2000 at New York University. She received a BA in economics from the College of Arts and Sciences at the university. She obtained her MS in information management from the School of Information Studies at Syracuse University in 2006. She also obtained a Certificate of Advanced Studies in Information Security in 2007. Her main research interests are in the field of information security. She is currently employed in the IT department at AXA Equitable.

Brett J. L. Landry is an associate professor, CISSP and director of the Center for Information Assurance in the Graduate School of Management at the University of Dallas. Landry earned his PhD from Mississippi State University and has published numerous journal articles on Information Technology in the ACM Journal of Educational Resources in Computing (JERIC), Communications of the ACM (CACM), Decision Sciences Journal of Innovative Education, International Journal of Services and Standards, Journal of Business Ethics, Journal of Organizational Change Management and others.

JinKyu Lee is an assistant professor of management science and information systems in Spears School of Business, Oklahoma State University. He holds Ph.D (2007) degree from the School of Management, University at Buffalo, Masters of Information Systems (1999) from Griffith University, Australia, and BBA (1996) from Yonsei University, Korea. His current research interest includes e-government, emergency management systems, information assurance, inter-organizational information sharing, and information security workforce development. He has published research articles in various academic conferences and journals including DSS, CACM, IEEE Transactions, ICIS, HICSS, AMCIS, and ECEG. He has also been involved in several NSF, NSA, and DoD funded research/educational projects in e-government and information assurance areas.

Lijun Liao is research associate at Horst Görtz Institute for IT-Security (HGI) at Ruhr-University of Bochum (RUB) in Germany. In 2005, he received his diploma in security in information technology from RUB. His current research interests include email security, XML security, and security in ad-hoe networks.

Qinyu Liao is an assistant professor of management information systems at The University of Texas at Brownsville. She holds a PhD in business information systems from Mississippi State University. Her current research interests are in e-commerce, computer security and privacy, end-user adoption of information technologies as well as cross-cultural influences of IT adoption. She has published articles in the Journal of Internet Banking and Commerce, and in conference proceedings including Americas Conference on Information Systems, International Conference of Electronic Business and the Southwest Decision Science Institute Conference, among others.

Peng Liu received his BS and MS degrees from the University of Science and Technology of China, and his PhD degree from George Mason University in 1999. Dr. Liu is an associate professor in the College of Information Sciences and Technology and director of the Cyder Security Lab at Pennsylvania State University. His research interests are in all areas of computer and network security.
Lin Luo receives her Bachelor degree in electrical engineering from Fudan University and her master degree in computer science from Florida International University. Her research interests focus on multimedia classification, architecture design, networking and security. She has authored conference and journal papers in these areas.

Xin Luo is an assistant professor of computer information systems at Virginia State University. He received his PhD in information systems from Mississippi State University, and holds an MBA from The University of Louisiana at Monroe and an MSIS from Mississippi State University. His research interests center around information security, mobile communications, and cross-cultural IT diffusion. His articles have appeared in such journals as Communication of the ACM, Information Systems Security, Journal of Internet Banking and Commerce, and International Journal of Information Security and Privacy. He has also published articles in several book chapters and national and international conference proceedings including AMCIS, DSI, IRMA, ISOneWorld, ICEB, GCBF, etc. He is the managing editor of Journal of Internet Banking and Commerce.

Andy Luse is a PhD student in both the human computer interaction interdisciplinary program with a home department in logistics, operations, and management information systems in the College of Business and the Computer Engineering program within the Electrical and Computer Engineering department in the College of Engineering, both at Iowa State University. His research interests include computer and network security as well as visualization systems for security. He is a member of the Institute of Electrical and Electronics Engineers, the Association for Computing Machinery, the Association for Information Systems, and the Beta Gamma Sigma scholastic honor society.

M. Pradhan is a research assistant professor of computer and information science at Indiana University and Purdue University- Indianapolis. Her research is in the area of understanding of the metabolic pathway and the enzyme function, to develop alternative pathways.

Mark Manulis is research associate at Horst Görtz Institute for IT-Security at RUB in Germany. In 2002, he received his Diploma and MSc in computer science from the Technical University of Braunschweig, Germany. His research focuses on cryptographic protocols, anonymity and privacy, electronic payment and coupon systems, as well as key management and authentication in wireless networks.

Andrew P. Martin is a graduate of the Master of Science program in management information systems (MSIS) from The Peter Kiewit Institute’s College of Information Science & Technology at the University of Nebraska at Omaha (UNO). His graduate thesis under Dr. Khazanchi’s supervision focuses on the key determinants of information availability and in particular on the role of security policy in addressing information availability concerns. Andrew currently is on active duty in the military.

Ammar Masood received the BS degree in aeronautical engineering from the College of Aeronautical Engineering, NED Engineering University, Pakistan, in 1991, and the MS and PhD degrees in electrical and computer engineering from Purdue University, West Lafayette, in 2003 and 2006 respectively. His research interests include access control policy verification and validation frameworks, application of software engineering principles towards achieving computer security and information infrastructure security.

Aditya Mathur is a professor of computer science at Purdue University located in West Lafayette, Indiana, USA. He has taught courses in computer sciences at all levels since 1972. He has written several books ,the most well known being Introduction to Microprocessors …first book of its kind published in India that introduced thousands of students to the basics of Microprocessors. Mathur is a prolific researcher and has published extensively in quality international journals and conferences in the area of software engineering. His significant contributions include the saturation effect, feedback control models of software process, comparative analyses of test adequacy criteria, and novel models of software process, comparative analyses of test adequacy criteria, and novel models of software reliability.
**About the Contributors**

**Eduardo Fernández-Medina** holds a PhD in computer science from the University of Sevilla. He is assistant professor at the Escuela Superior de Informática of the University of Castilla-La Mancha at Ciudad Real (Spain), his research activity being in the field of security in databases, data warehouses, web services and information systems. Fernández-Medina is co-editor of several books and chapter books on these subjects. Author of several manuscripts in national and international journals, he is a member of the ALARCOS research group of the Department of Computer Science at the University of Castilla-La Mancha. Eduardo’s e-mail is eduardo.fdezmedina@uclm.es.

**Sushma Mishra** is a PhD student in the Information Systems Department at Virginia Commonwealth University. She has a MBA degree from New Delhi, India. Her research interests lies in the areas of information security governance, internal controls for security, systems audit and systems analysis and design.

**Roy Ng**, MBA(IT), PMP, CISSP, CISA received his MBA in information technology at RMIT University, Australia. He is an assistant professor with the Ted Rogers School of Information Technology Management at Ryerson University. He has over 20 years of communication networks and IT management experience in consulting, information security infrastructure and network engineering. He has held various senior management positions in Fortune 500 companies including area vice president, Avaya Canada Inc. and director, consulting services at CGI groups. Ng is the principal of SMN Technologies, a consulting firm in the area of information security and project management. His research interest includes Information Assurance and Security in the area of outsourcing, corporate governance, privacy and network communications.

**Andrew M. Olson** is professor emeritus of computer & information science at Indiana University Purdue University in Indianapolis, and has taught software engineering at Butler University. Prior to these Indianapolis appointments, he served on the faculty of the Mathematics Department at the University of Puerto Rico, Rio Piedras, becoming professor and chair, and on the Engineering Mathematics Department faculty at the University of Chile, Santiago. He worked as an applications engineer for General Electric Company before then. His research has ranged from simulation and symbolic-numeric computation through visual programming languages, human/machine interaction to, currently, software engineering of distributed computing systems.

**Brahim Oubeka** is a network systems engineer. He got his engineering degree “Ingénieur d’état” at the Houari Boumedienne University of Science and Technology, Algeria in 2004 and his master degree in network systems from the University of “Versailles Saint-Quentin-en-Yvelines”, France in 2006. Mr. Oubeka’s main research interests are the TCP/IP networks, the ethernet technology and the network security systems.

**Pamela Ajoku** worked as a research assistant professor in the Department of Industrial Engineering, University of Pittsburgh in Pennsylvania and Center for E-Design at Pittsburgh. She has a bachelor’s degree in computer science & engineering and Masters and PhD degrees in industrial engineering from the University of Pittsburgh. Prior to graduate studies, Dr. Ajoku worked as a network/systems engineer and programmer. Her current research interests include information security, manufacturing systems, product development and distributed information systems management. She currently works for Haworth, a global manufacturer and leader in office furniture and architectural interiors.

**Joon S. Park** is an assistant professor and the director of the Laboratory for Applied Information Security Technology (LAIST) at the School of Information Studies at Syracuse University in Syracuse, New York, USA. Before he joined the school in 2002, he worked for the U.S. Naval Research Laboratory (NRL)'s Center for High Assurance Computer Systems (CHACS). He completed his doctorate at George Mason University in 1999, specializing in information security.

**Mario Piattini** has a PhD in computer science from the Politecnical University of Madrid. He is a certified information system auditor from the ISACA (Information System Audit and Control Association). Full professor at the Escuela Superior de Informática of the Castilla-La Mancha University (Spain) and author of several books.
About the Contributors

and papers on databases, software engineering and information systems, Piattini leads the ALARCOS research group of the Department of Computer Science at the University of Castilla-La Mancha, Spain. His research interests are: advanced database design, database quality, software metrics, object-oriented metrics and software maintenance. His e-mail address is Mario.Piattini@uclm.es.

Aditya Ponnam received his MBA from Louisiana State University with a concentration in internal auditing and information systems and decision sciences. He also holds a Master of Science in information systems and Bachelors in computer applications from Osmania University, India. His experience includes information systems auditing and risk management in energy, transportation and technology industries. He is a member of Institute of Internal Auditors and Information Systems Audit and Control Association.

Robert W. Proctor is a professor of psychology at Purdue University. Dr. Proctor has published over 130 articles on human performance and human factors. He is co-author of the books Human Factors in Simple and Complex Systems, Skill Acquisition and Human Performance, and Attention: Theory and Practice. He is also co-editor of Handbook of Human Factors in Web Design. He is fellow of the American Psychological Association and American Psychological Society, and honorary fellow of the Human Factors and Ergonomics Society.

Rajeev R. Raje is an associate professor in the Department of Computer and Information Science at Indiana University Purdue University Indianapolis. Dr. Raje holds degrees from the University of Bombay (BE) and Syracuse University (MS and PhD). His research interests are in distributed computing, component-based systems, programming languages, and software engineering. Dr. Raje’s current and past research has been supported by the US Office of Naval Research, National Science Foundation, Indigo Foundation, Eli Lilly and Company, and Microsoft Corporation. Rajeev is a member of ACM and IEEE.

H.R. Rao graduated from Krannert Graduate School of Management at Purdue University. His interests are in the areas of management information systems, decision support systems, e-business, emergency response management systems and information assurance. He has chaired sessions at international conferences and presented numerous papers. He also has co-edited four books. He has authored or co-authored more than 150 technical papers, of which more than 75 are published in archival journals. His work has received best paper and best paper runner up awards at AMCIS and ICIS. Dr. Rao has received funding for his research from the National Science Foundation, the Department of Defense and the Canadian Embassy and he has received the University’s prestigious Teaching Fellowship. He has also received the Fulbright fellowship in 2004. He is a co-editor of a special issue of The Annals of Operations Research, the Communications of ACM, associate editor of Decision Support Systems, Information Systems Research and IEEE Transactions in Systems, Man and Cybernetics, and co-Editor- in -Chief of Information Systems Frontiers. Dr. Rao also has a courtesy appointment with Computer Science and Engineering as adjunct Professor. Dr. Rao’s PhD students have placed at Sogang U, UNCG, ASU, USF, FAU, MSU, OKState, FSU, PennState and others. Professor Rao teaches Information assurance, Networks and e-commerce. Dr. Rao is also the recipient of the 2007 State University of New York Chancellor’s award for excellence in scholarship and creative activities.

Alan Rea is an associate professor of computer information systems at the Haworth College of Business, Western Michigan University in Kalamazoo, MI. At WMU, Dr. Rea teaches courses in Programming, Server Administration, and Web Services. His current research involves a combination of security and information-communication technologies, particularly Virtual Reality and Web 2.0 initiatives. In particular, Dr. Rea looks at designs, methods, and techniques to improve the means through which computers can better enable information exchange and secure processes.

Julian L. Rrushi is a PhD candidate at the Università degli Studi di Milano, Italy, and a visiting scholar at the Illinois Security Laboratory, University of Illinois at Urbana-Champaign, USA. He received a BS in Computer Science in 2003 and a MS in Information and Communication Technology in 2005, both from the Università degli Studi di Milano. During his Master studies he was awarded a research scholarship by (ISC)^2 for a project on
About the Contributors

mobile code and security implications on servers, and an internship by the Joint Research Center of the European Commission for preparing his Master thesis. His research interests focus on cyber-security of SCADA and process control systems in general used to remotely monitor and control critical infrastructure plants.

Rebecca H. Rutherfoord is a full time professor in Information Technology at Southern Polytechnic State University in Marietta, GA. Dr. Rutherfoord has been at SPSU for over 24 years and has serves as Department Head for CS, Department Head for Information Technology and Assistant to the President. She is currently directing the accreditation efforts for both the university and the IT department. Dr. Rutherfoord’s research interests include ethical issues , using personality inventories in forming teams, universal instructional design and andrology-the study of adult learners.

Arjamand Samuel received his BS degree in 1989 from the College of Aeronautical Engineering, NED Engineering University, Pakistan. He obtained his MS degree in Electrical Engineering in 1997 from the Beijing University of Aeronautics and Astronautics, Beijing, PR of China. He is currently working toward a PhD degree in the School of Electrical and Computer Engineering at Purdue University. From 1989 to 1994; he worked for Pakistan Air force. He has been manager of software engineering at Pakistan Aeronautical Complex, Kamra, Pakistan, from 1997 to 2003. He has worked as visiting faculty at Ghulam Ishaq Khan Institute of Engineering and Technology (GIKI) from 1994 to 2004 and has taught at COMSATS Institute of Information Technology, Department of Electrical Engineering from 2003 to 2004. His research interests include context-aware access control models, access control policy. He is a member of IEEE.

Javier Santos is a professor of operation management and enterprise information systems at Tecnun, University of Navarra, Spain. He is the Head of the department of Industrial Management Engineering, in Tecnun-University of Navarra. His research focuses on enterprise information system integration, modeling and development processes, and complex systems modeling. Dr. Santos received a PhD in industrial engineering from the University of Navarra. He has published a book in John Wiley & Sons and several papers in international journals as International Journal of CIM or International Journal of Industrial Ergonomics.

Jose Mari Sarriegi is a professor of Information systems, Knowledge management and Modeling and simulation at Tecnun-University of Navarra Engineering School, Spain. His research interests include information systems security, knowledge management, and complex systems modeling. He has led several research projects in all these topics. He has published in journals such as IEEE Software, International Journal of Computer Integrated Manufacturing, Lecture Notes in Computer Science, IEEE Internet Computing and International Journal of Industrial Ergonomics. He has also presented dozens of papers in international conferences. Sarriegi received a PhD in industrial engineering from the University of Navarra.

Kevin P. Scheibe is an assistant professor in Management Information Systems at Iowa State University. His research interests include spatial decision support systems, wireless telecommunications, IT outsourcing, and IT privacy and security. He is a member of the Association for Information Systems and the Decision Sciences Institute. Dr. Scheibe has published in journals such as Decision Support Systems, Journal of Information Privacy and Security, and Computers in Human Behavior. He received a PhD. from Virginia Polytechnic Institute and State University.

E. Eugene Schultz, PhD, CISSP, CISM, is chief Technology officer of High Tower Software. He served as a principal engineer with Lawrence Berkeley National Laboratory. He is the author of five books and over 100 papers, as well as the editor-in-chief of Computers and Security. He has received the NASA Technical Innovation Award, Department of Energy Technical Excellence Award, Best Paper Award for the National Information Systems Security Conference, and Information Systems Security Association’s (ISSA’s) Hall of Fame, Honor Roll, and Professional Contribution Awards. Dr. Schultz has also provided expert testimony for the U.S Senate and House of Representatives.
Jörg Schwenk has the chair for Network and Data Security at the Horst Görtz Institute for IT Security at RUB since 2003. From 1993-2001 he worked in the security department of Deutsche Telekom on different projects. He has written more than 60 patents, and more than 20 scientific publications. His research interests include cryptographic protocols (especially multi-party protocols), broadcast encryption schemes, XML and Web Service security and Internet security (especially protection against real world challenges such as pharming or WWW-based attacks).

Siraj Ahmed Shaikh is currently a postdoctoral research fellow at the International Institute of Software Technology (IIST), at the United Nations University (UNU) in Macau SAR China. His main research interests include formal design and analysis of distributed systems and protocols. His other interests include performance analysis of security protocols such as IPSec and SSH, and information security education. He is a Member of the British Computer Society (BCS).

Raj Sharman is a faculty member in the Management Science and Systems Department at SUNY Buffalo, NY. He received his BTech and M Tech degrees from IIT Bombay, India and his MS degree in industrial engineering and PhD in computer science from Louisiana State University. His research streams include information assurance, and disaster response management, decision support systems, and distributed computing. His papers have been published in a number of national and international journals. He is also the recipient of several grants from the university as well as external agencies.

Paul John Steinbart is a professor in the Department of Information Systems at Arizona State University. He teaches graduate courses on computer and information security and an undergraduate course on accounting information systems. Professor Steinbart’s research has been published in leading academic journals including MIS Quarterly, Decision Sciences, and The Accounting Review. He is also co-author of the textbook Accounting Information Systems published by Prentice-Hall. Professor Steinbart serves as associate editor for the Journal of Information Systems (published by the American Accounting Association) and is a member of the editorial board for the International Journal of Accounting Information Systems.

Dwayne Stevens is the senior IT auditor at Community Trust Bank, Inc., in Pikeville, Ky. He is a 2006 graduate of the MSIS program at Morehead State University, where he also earned his MBA in 2000. In prior roles, Dwayne has served as the software development manager at a rural telecommunications company, and as a college professor teaching information technology and management information systems courses. Dwayne is also the vice-president of a small Web design company, Knightly Innovations, in Pikeville, Ky., where he resides with his wife, Melanie.

Art Taylor is a professor of computer information systems at Rider University where he teaches courses on computer security and forensics, networking and programming. He has published seven computer technology books and numerous journal articles. Prior to joining Rider University, he worked as a computer consultant specializing in databases and programming.

Omkar Tilak is a PhD student in the Department of Computer and Information Science at Indiana University Purdue University Indianapolis. Omkar holds degrees from the University of Bombay (BE) and Purdue University (MS). His research interests are in distributed computing, component-based systems and software engineering. Omkar is a member of IEEE.

Jose M Torres is a PhD student at Tecnun, University of Navarra, Spain. His research focuses primarily on security management of information systems. His PhD, finished in September 2007, focuses on contrasting security experts’ perspectives with empirical studies in small and medium size enterprises with the aim to introduce security management habits into this sector. He has a publication in the Lecture Notes in Computer Science and also has presented several papers in international conferences.
Anthony M. Townsend, PhD is the accenture faculty fellow and associate professor of MIS at Iowa State University. He received his MS and PhD from Virginia Polytechnic Institute and State University and conducts research in collaborative systems and virtual teams. He has published in MIS Quarterly, Information Systems Research, the Communications of the ACM, along with a number of other venues.

Juan Trujillo is an associated professor at the computer science school at the University of Alicante, Spain. Trujillo received a PhD in computer science from the University of Alicante (Spain) in 2001. His research interests include database modeling, conceptual design of data warehouses, multidimensional databases, OLAP, as well as object-oriented analysis and design with UML. With papers published in international conferences and journals such as ER, UML, ADBIS, JDM and IEEE Computer, Trujillo has served as program committee member of several workshops and conferences and has also spent some time as a reviewer of several journals. His e-mail is jtrujillo@dlsi.ua.es.

Udaya Kiran Tupakula received a BE degree in electronics and communication engineering from the Gulbarga University, India in 1997 and the Master's degree in information technology from the University of Western Sydney, Australia in 2001. He received the PhD degree in computer science from the Macquarie University, Australia in 2006 and currently working as a research fellow in Information and Networked System Security Research Group. His research interests include security in distributed systems, intrusion detection, mobile adhoc network security and sensor network security.

Jamie Twycross is a research associate in the Department of Computer Science at The University of Nottingham. He is working on a large interdisciplinary project investigating the application of immune-inspired approaches to computer security. His research interests include biologically-inspired approaches to computing, computer security and networking, and robotics.

Uwe Aickelin currently holds an advanced research fellowship awarded by EPSRC (the UK’s largest Funding Council). He is also a Reader in Computer Science at The University of Nottingham and a member of the Automated Scheduling, Optimisation and Planning Research group (ASAP). Dr. Aickelin has been awarded over 2 million EPSRC research funding as Principal Investigator in Artificial Immune Systems and Computer Security.

Vijay Varadharajan is the Microsoft chair and professor of computing at Macquarie University. He is also the director of Information and Networked System Security Research. He is editorial board member of several international journals including the ACM Transactions on Information System Security and the Springer-Verlag International Journal of Information Security. He has published more than 275 papers, has co-authored and edited 8 books, and holds 4 patents. His current areas of research interests include trusted computing, security in high speed networks and large distributed systems, and mobile adhoc networks security. He is a fellow of IEE, IEAust, ACS, BCS and IMA.

Rodolfo Villarroel has an MSc in computer science from the Technical University Federico Santa María (Chile), and a PhD at the Escuela Superior de Informática of the Castilla-La Mancha University (Spain). Associated professor at the Computer Science Department of the Universidad Católica del Maule (Chile), his research activity is in the field of security in data warehouses and information systems, and of software process improvement. Author of several papers on data warehouse security and improvement of software configuration management process, Villarroel belongs to the Chilean Computer Science Society (SCCC) and the Software Process Improvement Network (SPIN-Chile). His e-mail is rvillarr@spock.ucm.cl.

Kim-Phuong L. Vu is associate professor in human factors at California State University, Long Beach. She received her PhD in 2003, and has over 50 publications in areas relating to human performance and human-computer interaction. She is co-author of the book Stimulus-Response Compatibility Principles and co-editor of the Handbook of Human Factors in Web Design.
About the Contributors

Hai Wang received the BS and MS degrees from Jilin University (Changchun, China). He is now a PhD candidate in the College of Information Sciences and Technology at Pennsylvania State University. His research interests are in computer and network security.

Ed Watson is the E. J. Ourso Professor of business analysis at Louisiana State University. His teaching activities include: technology and operations management, management of information systems, and enterprise systems and IS audit. His most recent research activities have been in the areas of IT-enabled service delivery, innovation and corporate transformation, and enterprise systems integration and education. He has published over 50 articles and book chapters in operations and information systems outlets. He is active in AIS, DSI, and ISACA and is a regular contributor, speaker, and organizer at related conferences and workshops. He previously served as SAP UCC director at LSU and SAP University Alliance manager for SAP USA.

Edgar R. Weippl (CISA, CISM, CISSP) is assistant professor at the Vienna University of Technology and Science Director of Security Research (www.securityresearch.at). His research focuses on applied concepts of IT-security and e-learning. Edgar has taught several tutorials on security issues in e-learning at international conferences, including ED-MEDIA 2003-2007 and E-Learn 2005. In 2005, he published Security in E-Learning with Springer. After graduating with a PhD from the Vienna University of Technology, Edgar worked for two years in a research startup. He then spent one year teaching as an assistant professor at Beloit College, WI. From 2002 to 2004, while with the software vendor ISIS Papyrus, he worked as a consultant for an HMO (Empire BlueCross BlueShield) in New York, NY and Albany, NY, and for Deutsche Bank (PWM) in Frankfurt, Germany.

Doug White has worked for The Federal Reserve System, Martin Marietta Energy Systems, and currently manages Whitehatresearch.com, a consulting specialty firm. Dr. White has spent 12 years teaching computer programming, security, and networking at the university level. Dr. White is currently an associate professor at Roger Williams University in Bristol, Rhode Island.

Paul D. Witman is an assistant professor of information technology management in the School of Business at California Lutheran University. Witman holds a PhD in information systems and technology from Claremont Graduate University. His research interests include information security, usability, technology adoption and continuance, and electronic banking and finance.

Yuni Xia is an assistant professor of computer and information science at Indiana University Purdue University - Indianapolis. Her research includes databases, moving object databases, sensor databases, data mining, data uncertainty management, data stream management and ubiquitous/pervasive computing. She holds a bachelor degree from the Huazhong University of Science and Technology of China, an MS and a PhD degree from Purdue University. She has served on the program committee of a number of conferences in databases and pervasive computing.

Li Yang is an assistant professor in the Department of Computer Science and Electrical Engineering at University of Tennessee at Chattanooga. Her research interests include network and information security, databases, and engineering techniques for complex software system design. She authored over ten papers on these areas on refereed journal, conferences and symposiums. She is a member of the ACM.
