About the Contributors

Zongwei Luo is a senior researcher at the E-business Technology Institute, The University of Hong Kong (China). He is the founding Editor-in-Chief of the International Journal of Applied Logistics and serves as an associate editor and/or editorial advisory board member in many international journals. Dr. Luo’s recent interests include applied research and development in the area of service science and computing, innovation management and sustainable development, technology adoption and risk management, and e-business model and practices, especially for logistics and supply chain management.

Carl Adams’s research interests are with (mobile) information systems, m-commerce/e-commerce and examining adoption and impact of technology within society. Current projects include examining the use and development of mobile and wider ICT technologies and their impact (from mobile phones to autonomic systems); social networking, creativity and innovation and, electronic and mobile payment mechanisms and corresponding (local) exchange mechanisms. This last area explores the wider social impacts of all forms of money and novel exchange mechanisms.

Timothy R. Anderson is an Associate Professor of Engineering and Technology Management at Portland State University. He received his MSIE and PhD in Industrial Engineering from the Georgia Institute of Technology after receiving his BS in Electrical Engineering from the University of Minnesota. He has worked for and consulted with a variety of companies including Honeywell, Oki Electric, Menlo Logistics and the US Postal Service. He is currently the Program Chair as well as the Director of Technical Activities for the Portland International Center for Management of Engineering and Technology (PICMET). His current research interests are productivity analysis, operations research, service engineering, technology forecasting and new product development. Recent journal articles have been published in the IEEE Transactions on Engineering Management, Technological Forecasting and Social Change, Technovation and the Journal of Productivity Analysis. He is a fellow in the American Indian Science Engineering Society.

Raghu Bir Bista is an Economist. He is a lecturer of economics working in Department of Economics, Patan Multiple Campus of Tribhuvan University, Nepal. He teaches policy economics and development economics. He was an editor of Economic Journal of Development Issues (2005-2008) published by Department of Economics. Foreign Direct Investment in Nepal is his first book published by CIDS in 2005. This was followed by second book, Economics of Nepal in 2008 and third book, Global Role of
Nepalese forest in 2010. He has been working in the study of climate change, particularly lower carbon behavior and activities in developing countries and REDD since 2008.

**Julien Chevallier** is Assistant Professor of Economics at the Université Paris Dauphine. He is member of the CGEMP/LEDa.

**Tugrul Daim** is an Associate Professor and PhD Program Director in the Department of Engineering and Technology Management at Portland State University (PSU). Prior to joining PSU, he had worked at Intel Corporation for over a decade. His papers appeared in Technological Forecasting and Social Change, Technovation, Technology Analysis and Strategic Management, Computers and Industrial Engineering, Energy, Energy Policy and many others. He is the Editor-in-Chief of the International Journal of Innovation and Technology Management and North American Editor of Technological Forecasting and Social Change. He received his BS in Mechanical Engineering from Bogazici University in Turkey, MS in Mechanical Engineering from Lehigh University in Pennsylvania, MS in Engineering Management from Portland State University, and PhD in Systems Science: Engineering Management from Portland State University in Portland, Oregon.

**Johanna Etner** is Professor of Economics at the Université Paris Descartes. She is member of the LIRAES.

**Sinan Erzurumlu** is an assistant professor of Technology and Operations Management at Babson College. He received a PhD degree in supply chain and operations management from McCombs School of Business and a Master’s degree in industrial engineering and operations research from the University of Texas at Austin. His research interests include Start-up Operations, Clean Technology Commercialization, and Competition and Collaboration in Technology Development and Deployment. He is a member of the Decision Sciences Institute, Institute for Operations Research and Management Sciences, Manufacturing and Service Operations Management Society, and Production and Operations Management Society. He teaches an undergraduate course on business and the environment.

**Dr. Avninder Gill** obtained his Master’s and Ph.D. degrees from University of Manitoba (Canada) and a Bachelor in Engineering from Punjab University (India). Dr. Gill is currently a faculty member at School of Business & Economics at Thompson Rivers University, Canada. Prior to this, Dr. Gill has been a faculty at various Universities in Supply Chain Management, Project Management, Operations Management and Optimization areas. Dr. Gill has worked in the industry as a manufacturing engineer as well as supply chain consultant. He has chaired various divisions and sessions at international conferences. Dr. Gill has published over fifty papers in reputed journals and conferences. His research has appeared in International Journal of Production Research, International Journal of Operations and Production Management, Computers & Industrial Engineering, International Journal of Systems Science, Asian-Pacific Journal of Operational Research and Applied Stochastic Models in Business & Industry. Dr. Gill can be contacted at agill@tru.ca.

**Miguel R. Henriques** received the BSc and MSC in information systems and computer engineering (CSE) from Instituto Superior Técnico (IST, Technical University of Lisbon, Portugal) in 2008 and 2010, respectively. His research brought forward the current state-of-the-art in enterprise ontological
modeling, governance themes and systemic theories regarding the enterprise dynamics. His master thesis abstracts from these fields of research a reference method for guiding the enterprise governance in defining a set of restrictions (normative outputs) by means of DEMO models. He is currently working in the derivates trading industry, in particular he has been developing and integrating trading systems in the commodities market.

Rui Henriques is developing his PhD studies in the field of time-sensitive supervised machine learning over structured domains at Instituto Superior Técnico (IST, Technical University of Lisbon, Portugal). He is currently leading projects to gather the implications of his research over clinical, omic and sensor-based data. He had received distinctions for his academic achievements by IST between 2006 and 2010, and, in 2009, received a national award of merits by CGD. Additionally, Rui has been a business analyst in McKinsey with wide exposure to real-life projects.

Peter Hills is the Director and Chair Professor of Kadoorie Institute, the University of Hong Kong. His research interests centre on the relationship between environmental and sustainability issues and the policy-making process. Over the years, his personal research agenda has moved on from an early interest in transport-environment issues and applications of environmental impact assessment (EIA), to energy-environment problems and more recently to environmental policy processes, environmental governance, sustainable development and ecological modernisation. He has acted as a consultant to various international organizations, including The United Nations Development Programme, The United Nations Economic and Social Commission for Asia and the Pacific, The Asian Development Bank, The International Labour Office, The Asian and Pacific Development Centre, and The European Union. He has recently been working as a consultant for the EU-funded Urban Environmental Planning Programme – Vietnam which has been assisting the Ho Chi Minh City University of Architecture to upgrade its urban planning programmes.

Nitin Joglekar is an associate professor of operations and technology management at Boston University’s School of Management. His research addresses Clean Technology Commercialization - Startup and Diffusion, and Complexity and Emergent Outcomes in Distributed Innovation Projects and Portfolios. Professor Joglekar is a Senior Editor at Production and Operations Management, and Associate Editor for Innovation and Entrepreneurship at Management Science. Prior to his academic career, he has worked in the IT and shipbuilding/energy industries. He was a founder of a venture capital backed software firm. He advises entrepreneurial and established firms in their initiatives for achieving business growth and profitability.

Pierre-André Jouvet is Professor of Economics at the Université Paris Ouest Nanterre La Défense. He is member of Economix.

Nitin Katarya works for Intel corporation in Oregon in the areas of Quality as a product Quality engineer. His job includes ensuring and addressing Quality issues faced by Intel’s customers and getting them resolved in a timely manner coordinating with the design team. He holds a Bachelor in Engineering from India and a Masters in electrical engineering from California State University in Sacramento. He is a part-time student of the Masters in Engineering and Technology Management from Portland State University.
About the Contributors

**Dhanabal Krishnaswamy** is a part-time student of the Masters in Science from the Portland State University’s Engineering and Technology Department. He is employed as an IT Specialist in a medium scale telecommunications company in Portland.

**Jacqueline Lam** is a post-doctoral fellow at the Kadoorie Institute, the University of Hong Kong. Her current research focusses on the design and implementation of environmental regulation and the effects on technological environmental innovation, especially with reference to electric vehicles and biofuels development and adoption in Hong Kong, China, USA and UK. Recently, she has also applied the theory of transitional management in the transition to low-carbon energy and transport technologies in these countries. Other ongoing research topics of hers include the relationship between open innovation, environmental performance and corporate competitiveness.

**Simon Mouatt’s** research explores the notion of the erosion of state (financial) sovereignty, and general transformation of the capitalist credit system, from a Marxian perspective. He is interested in all aspects of monetary theory, and the functioning of the capitalist financial system per se. Simon lectures in economics and international financial markets at Southampton Solent University.

**Dr Roberto Poles** is a research fellow in the Faculty of Business and Economics at the University of Melbourne (Australia). He has a diverse background with previous employment as a visiting lecturer at the School of Engineering, Department of Civil & Environmental Engineering. He joined the University of Melbourne upon completion of his PhD research in business information technology and logistics. He also holds an MSc in Industrial Engineering. His research interests lie in strategic supply chain and business process modeling and optimization with a particular interest in reverse logistics/supply chain management and operations management. He is also interested in computer-aided method for analyzing and solving complex problems, such as System Dynamics simulation modeling. He is currently under contract for an inter-disciplinary project in response to the National Water Initiative to develop new methods to efficiently manage surface and groundwater resources for both agriculture and the environment.

**Neelu Singh** is a student of the Masters in Science from the Portland State University’s Engineering and Technology Department with a Masters in Statistics from India.

**Ganesh Subramanian** is a Lead Infrastructure Architect at Providence Health Systems. He had been involved in Design, Engineering and Implementation of several IT Infrastructure Projects at Providence. Ganesh is a student of the Masters in Engineering and Technology Management at the Portland State University in Oregon.

**S. Sureshkumar**, the author, is a senior scientist and Adviser to Director at National Institute For Interdisciplinary Science And Technology (formerly Rrl,Trivandrum),a CSIR unit located at Trivandrum, India. Incidentally CSIR is a premier public research organization in the country. The author has been associated with environmental technology programs in the institute as a part of the management and advisory team of scientists,and of late has been associated with climate change programs,and guiding scholars in this regard. His other areas of research interests include innovation diffusion,science management, and policy studies where he has published widely and participated in conferences. His work
on planning and evaluation has helped in developing measures for research performance incorporating
basic and application and development aspects. He has over 30 years of experience in the above fields
and guided many research scholars and project students in these areas. He is an alumni of the prestigious
IIT Madras, India.

Fehmi Tanrisever is an assistant professor of Operations Management at the Industrial Engineer-
ing and Innovation Sciences Department at Eindhoven University of Technology. He received a PhD
degree in supply chain and operations management from the University of Texas at Austin in 2009. His
research interests include Start-up Operations and Risk Management, Clean Technology Development
and Deployment, Commodity Risk Management and Operations-Finance Interface. He teaches graduate
and undergraduate level courses in integrated operational and financial risk management, operations
management, business finance and financial accounting.

Mukundan Thirumalai is a part-time student currently pursuing his Masters in Science from the
Portland State University’s Engineering and Technology Department. He is employed as an IT analyst
at a reputed Less Than Truckload transportation organization.

Prof. J. Zambujal-Oliveira received M.S. degrees in Economics at New University of Lisbon (FE)
and in Management Science at Technical University of Lisbon (ISEG). In 2007, he received a Ph.D.
degree in Management Science from the Technical University of Lisbon (ISEG). Before coming to the
Department of Engineering and Management at Technical University of Lisbon (IST), Prof. J. Zambujal-
Oliveira was employed as a systems engineer at banks, insurance companies and consulting firms, and
as an assistant professor of management at the University of Madeira in Funchal. Prof. J. Zambujal-
Oliveira’s research interests include real options analysis and international taxation. In particular, he
enjoys working with graduate students and colleagues in developing, analyzing, and testing numerical
methods for solving stochastic differential equations, developing and analyzing models in transfer prices
systems and developing, analyzing, and testing computational methods in mathematical finance.

Sam Wong is a Lecturer in the School of Environmental Sciences at the University of Liverpool,
UK. His research interests lie in renewable energy, sustainable technology and water governance in
South Asia, West Africa and Ecuador. He has written a book Exploring Unseen Social Capital in Com-
munity Participation (Amsterdam University Press, 2007) and co-edited a book Identity in Crossroad
Civilizations. His other key publications are in Energy Policy, Urban Studies and Transactions of the
Institute of British Geographers. He has received more than £150K from EPSRC, British Council, Brit-
ish Academy and NESTA.

Ms. Ying Yin is a graduate from the Msc Program of Computer Science, the University of Hong
Kong, Hong Kong, China. She is now working as a business analyst in an investment bank in Hong Kong.
