About the Contributors

Alexander Y. Yap is an Associate Professor of Information Systems at Elon University, North Carolina. He holds a Ph.D. degree in Information Systems from Copenhagen Business School (Denmark), an MBA in International Management from Exeter University (UK), and a Masters in Development Economics from Williams College (USA). He won the prestigious ‘ICIS Best Paper Award’ in Helsinki, Finland. His research papers have been published in the *Journal of Global Information Management*, *the Journal of E-Commerce Research*, *Journal of Electronic Markets*, and *the Journal of Enterprise Information Systems*, among others. He has also published in prestigious IS conferences, which include the ICIS, ECIS, and ACM.

***

Biliana Alexandrova-Kabadjova obtained her first degree in Information Systems at ITESM-CCM, Mexico in 1996. She received a M. Sc. in Computer Science and a Ph. D. in Computational Finance from the University of Essex in 2003 and 2007, respectively. From 1997 to 2007 she was working as System Analyst at the Directorate of Systems, Banco de Mexico (Mexican Central Bank). From 2007 to 2010 she was a payment system analyst at the General Directorate of Central Bank Operations. Currently she is a payment system analyst at the General Directorate of Payment Systems and Risks. She has published several refereed journal papers, book chapters, and conference papers. Her main research interests are on payment card markets, payment systems, and in agent-based computational economics. Dr. Alexandrova-Kabadjova is a member of the National System of Researchers (SNI) in Mexico and a Visiting Fellow at the University of Essex.

John J. Burbridge, Jr. is currently a Professor of Operations and Supply Chain Management in the Martha and Spencer Love School of Business at Elon University. Prior to joining the full-time faculty, he served as Dean of the Love School of Business for eleven years. He has published many articles that have appeared in such journals as the *International Journal of Electronic Government Research*, *Journal of Global Information Management*, *Journal of the Academy of Business Education*, *Journal of International Business Studies*, and *Business Insights*. He has been a faculty member at Loyola College in Maryland, Rutgers University, and Lehigh University. While at Loyola, he was the Director of the David D. Lattanze Center for Executive Studies in Information Systems which was ranked first in the country by CIO Magazine. He has a B.S., M.S, and PhD in Industrial Engineering from Lehigh.
About the Contributors

**Hsinchun Chen** is McClelland Endowed Professor in the Department of Management Information Systems, The University of Arizona, Tucson, AZ. Dr. Chen is a Fellow of IEEE and AAAS. He received the IEEE Computer Society 2006 Technical Achievement Award and the INFORMS Design Science Award in 2008. He has the h-index of 56. He is author/editor of 20 books, 25 book chapters, 210 SCI journal articles, and 140 refereed conference articles covering Web computing, search engines, digital library, intelligence analysis, biomedical informatics, data/text/web mining, and knowledge management.

**Shu-Heng Chen** is a Distinguished Professor in the Department of Economics, at National Chengchi University. Prof. Chen holds an M.A. degree in mathematics and a Ph. D. in Economics from University of California at Los Angeles. He is the Dean of Office of International Cooperation, Director of the AI-ECON Research Center, and the organizer of Experimental Economics Laboratory at National Chengchi University. He has more than 150 publications in international journals, edited volumes, and conference proceedings. He is considered one of the founders and leaders in the field of agent-based computational economics and the first to introduce genetic programming into Agent-based Computational Economics. Prof. Chen serves as Vice Chair of the IEEE Computational Finance & Economics Technical Committee, the editor-in-chief of the Journal of New Mathematics and Natural Computation (World Scientific), and the associate editor of the Journal of Economic Behaviour and Organization and Journal of Economic Interaction and Coordination.

**Donald L. Crooks**, Ph.D., is an Assistant Professor, Director Graduate Business Programs Wagner College, with a professional background that spans four decades including Managing Director Equity Trading, Morgan Stanley, and culminating as Managing Director and Global Head of Trading and Risk All Equity Products at Lehman Brothers. Dr. Crooks transitioned into the academic world in 2001 and has been teaching in both the Undergraduate and Graduate division ever since specializing in Finance and Management subject areas. Dr. Crooks brings a deep understanding of financial products to the classroom along with years of real world upper level management experience.

**Edward Curry** investigates the impact and adoption trends of emerging technologies within industry. His specific focus has been how linked data technology and the web of data are changing the way businesses work and interact with information. Edward is a research leader at the Digital Enterprise Research Institute (DERI), one of the leading international web science research organizations. His projects include studies of enterprise linked data, energy informatics, semantic information management, and community-based data curation. Edward has worked extensively with industry and government advising on the adoption patterns, practicalities, and benefits of new technologies to enhance information architectures and flows within their organizations. His research has investigated the utilization of these technologies within the pharmaceutical, oil & gas, financial, advertising, media, manufacturing, health care, ICT, and automotive industries. Edward has a PhD from the National University of Ireland, Galway, has published journal and book articles and has spoken at international conferences.

**Xiaotie Deng** received the Ph.D. degree in Computer Science in 1989 from Stanford University, USA. He is a Chair Professor of City University of Hong Kong since 1997. His research interests include algorithmic game theory and algorithmic trading. He serves as an ACM fellow since 2008.
Keren Dong received the B.E. degree in Computer Science in 2005 from Tsinghua University, China. He is currently a PhD student in the Department of Computer Science at the University of Liverpool, UK. His research topic is algorithmic trading.

Alma García-Almanza obtained her first degree in Actuarial Science at Faculty of Science, UNAM, Mexico in 1995. She received a M. Sc. in Computer Science and a Ph. D. in Computer Science from the University of Essex in 2004 and 2008, respectively. Since 1995 she is working at Banco de Mexico (Mexican Central Bank). She has published several refereed journal papers, book chapters, and conference papers. Her main research interests are on genetic programming, machine learning, data mining, and financial forecasting. Dr. Alma García-Almanza is a member of the National System of Researchers (SNI) in Mexico and a Visiting Fellow at the University of Essex.

Andreas Harth is a Researcher and Lecturer at the Karlsruhe Institute of Technology with interests in large-scale interoperability between Web information sources, self-organisation in networks, and graph-based data. Specific projects include: SWSE, the Semantic Web Search Engine; VisiNav, a visual data search and exploration system; YARS, yet another RDF store; and TRIPLE, a reasoning and inference engine. Andreas had experience in deployment of systems that enable user search and exploration of collaboratively-edited Web datasets within the financial, marketing, and IT sectors. Andreas currently works on the international project, MeRegioMobil, researching the use of innovative ICT approaches for the efficient integration of mobile electrical storage in vehicles and their integration as concepts into the established energy system, and NeON, looking at ontologies for large-scale semantic applications in distributed organizations. Andreas has a PhD from the National University Ireland, Galway.

Michael Kampouridis is a Research Assistant at the School of Computer Science and Electronic Engineering at the University of Essex. He holds a BSc in Economics from the University of Athens (2005), and an MSc in Computer Studies from the University of Essex (2006). He is currently working towards a PhD degree in Computer Science, also from the University of Essex. He has also twice served as a visiting research student to the National Chen Chi University of Taiwan. His research interests include machine learning techniques and their applications to financial and economic problems, agent-based economics, and computational economics in general. Mr. Kampouridis is a student member of IEEE and the IEEE Computational Intelligence Society.

Joe Kelley has taught at four universities in California and New York. He has been on the cutting edge of computation since learning to program Fortran across the street from what is now Apple Computer. He has mostly worked as a quantitative and computer consultant and programming consultant to banks, trading companies, and economic research in Chicago and on the East and West Coast. He is glad to see that finally the tools available are becoming strong enough to match the needs of the financial industry. He has degrees in Finance and Economics including a PhD and MA from UC Berkeley; a MS and BA from San Diego; and also has a BA in Applied Mathematics and Computer Information Systems.

Mike Kersch holds a Master’s degree in Computer Science from the Saarland University (Germany) on the subject of component based software development and Semantic Web. Currently, he is a Research Assistant at the Saarland University, where he is a member of the information and technology management research group. His research interests include trading systems, trading algorithms, and their evaluation methods.
Serafin Martinez-Jaramillo has an actuarial sciences degree from the Universidad Nacional Autonoma de Mexico (UNAM). He obtained a M. Sc. in Computer Science and a Ph. D. in Computational Finance at the University of Essex. In 1995 and 1996 he participated as a Research Assistant in a study of the energy savings due to the implementation in Mexico of the Daylight Saving Time program. Since 1997 he has worked at Banco de Mexico, the Mexican Central Bank, first as a Computer Systems Analyst, and more recently, as a Senior Financial Researcher at the Financial Stability General Directorate. Dr. Serafin Martinez-Jaramillo has published several journal papers, book chapters, and encyclopedia entries on topics related to his research interests: systemic risk, financial networks, financial contagion, bankruptcy prediction, genetic programming, artificial financial markets, computational finance, and computational economics. He is also member of the Mexican National System of Researchers (SNI) and Visiting Fellow at the University of Essex.

Sean O’Riain’s research interests include the use of linked data, NLP, and business taxonomic standards for enhanced semantic information access within enterprises. Sean heads up the eBusiness Unit at the Digital Enterprise Research Institute (DERI) with linked data related projects that investigate querying using semantic relatedness, entity centric semantic information management and integration, provenance, and data quality. Before joining DERI in 2006, Sean worked as a senior researcher at Hewlett-Packard’s European Software Centre Semantic Infrastructure Research Group, focusing on the exploitation of Semantic Web technologies for data integration and analysis. Sean has extensive experience working with joint industrial–academic collaborative research programmes, and industrial sponsored research, investigating the adoption patterns and use of semantically enhanced information integration for business information analysis and search.

Günter Schmidt holds the Chair for Information and Technology Management at the Saarland University – Germany. He received his doctoral degree in 1983 from the Technical University of Berlin. His main research interest is on information and operations management, scheduling, financial information systems, decision support systems, and online algorithms.

Robert P. Schumaker (rob.schumaker@gmail.com) is a Visiting Assistant Professor in the Computer and Information Sciences Dept. at Cleveland State University, Cleveland, OH. Rob is author of numerous articles in DSS, ACM TOIS, JASIST, CACM, and IEEE Computer. His work on textual financial prediction has been featured in The New York Times, Business Day, MIT’s Technology Review, Slashdot. org, and numerous other venues.

John H. Slayton, CFP®, President and General Counsel of the Trust Company of the South since 1996, has over thirty years experience in the investment, trust, securities, and financial planning industries. He served as General Counsel/Investment Advisor to the Gordon P. Getty Trust and a securities attorney at Pillsbury, Madison, & Sutro. Mr. Slayton earned an L.L.M. - Tax from Georgetown University Law Center, a J.D. and M.B.A. – Finance from George Washington University, and a B.A. from Marquette University. Mr. Slayton is Past Chair of the Trust and Investment Services Subcommittee of the American Bar Association. He is a frequent author, speaker, and expert witness on estate planning, fiduciary, and investment matters. Mr. Slayton is an Adjunct Assistant Professor in Finance and member of the Board of Advisors of the Love School of Business at Elon University.
Wonhi Synn is a Professor of Finance at the Martha & Spencer Love School of Business, Elon University, Elon, NC, where he primarily teaches Corporate Finance and Investments. His areas of academic interest include enterprise valuation, performance evaluation, market innovations, and business education. He has recently published articles on government sponsored enterprises (GSEs), online stock trading, bankruptcy prediction, and various business curriculum and pedagogical issues. He received a Bachelor’s degree from Seoul National University, an MBA from University of New Orleans, and a Ph.D. from University at Buffalo, The State University of New York.

Edward Tsang is a Computer Science Professor at the University of Essex. He holds a first degree in Business Administration (major in Finance) from the Chinese University of Hong Kong (1977), and an MSc and PhD in Computer Science from the University of Essex (1983 and 1987). Prior to his PhD studies, he served for five years in various positions in the commercial sector in Hong Kong. He is the Director (and co-founder) of Centre for Computational Finance and Economic Agents (CCFEA) at University of Essex. He is the author of Foundations of Constraint Satisfaction, the first book to define the scope of the field. He specializes in business application of artificial intelligence. His research interests include artificial intelligence applications, computational finance, constraint satisfaction, evolutionary computation, and heuristic search. Prof. Tsang founded the Computation Finance and Economics Technical Committee in IEEE’s Computational Intelligence Society in 2004, and chaired it until the end of 2005. He has given consultation to GEC Marconi, British Telecom, the Commonwealth Secretariat, and other organizations.

Roger van Daalen Fuente is currently writing his PhD thesis, based at the department of Management Science, Lancaster University Management School, in the United Kingdom. His research interests revolve around knowledge work in information systems, applied to the finance industry. He has done research on modern trading floors in the Americas, Europe, and the Middle East. He holds a BScBA from RSM Erasmus University in Business Administration, and a BSc in Industrial/Organizational Psychology from the faculty of Social Sciences at Erasmus University. He has worked as an entrepreneur in the IT services sector.

Feng Wang received the M.S. and Ph.D. degree in Computer Science in 2005 and 2008, respectively, both from Wuhan University, China. She is a faculty member of the State Key Lab of Software Engineering of Wuhan University since 2008. Her research interests include evolutionary computation, intelligent information retrieval, evolvable hardware, and complex system. She serves as a reviewer for several IEEE transactions, and other international journals and conferences. She is a member of IEEE and ACM.
