About the Contributors

Malgorzata Pankowska is an Assistant Professor of the Department of Informatics at the Karol Adamiecki University of Economics in Katowice, Poland. She received the qualification in econometrics and statistics from the Karol Adamiecki University of Economics in Katowice in 1981, the Ph.D. degree in 1988 and the Doctor Habilitatus degree in 2009, both from the Karol Adamiecki University of Economics in Katowice. She participated in EU Leonardo da Vinci Programme projects as well as gave lectures within the Socrates Program Teaching Staff Exchange in Braganca, Portugal, Trier, Germany, Brussels, Belgium, and in Vilnius, Lithuania. She is a member of ISACA and the Secretary in the Board of the Polish Scientific Society of Business Informatics. Her research interests include Virtual Organization development, ICT project management, IT outsourcing, information governance, and business information systems design and implementation.

Vassiliki Andronikou obtained her diploma from the Electrical and Computer Engineering Department of the National Technical University of Athens in 2004. She has worked in the National Bank of Greece and the Organization of Telecommunications of Greece, and since 2004 she has been a research associate and Ph.D. candidate in the Telecommunications Laboratory of the NTUA. In 2005 she was given the Ericsson award for her Thesis on Mobile IPv6 with Fast Handovers. Her research has involved her participation in many European projects, with her interests focusing on the fields of the security and privacy aspects of biometrics and data management in Grid.

Ole Axvig developed an interest in information management over years spent as a project manager and operations manager for small consulting firms. He currently works as an independent management consultant.

Hassan Bezzazi is a lecturer at law faculty of University de Lille 2 where he is currently Project Manager for the Internet and Informatics Certificate, Legal Professions (C2I-LP). He has a doctorate in Computer Science from University de Lille 1. He led educational activities for nine years in Athens. His main research areas are Information Systems and Law, Artificial Intelligence and e-learning. He is member of a number of conference and project evaluation committees. He designed and developed a number of tools related to expert systems and education. He participated in interdisciplinary projects with lawyers on as various subjects as security, data protection and e-government. His current research activities focus on the design and development of distributed e-learning platforms for interdisciplinary
About the Contributors

training as well as appropriate training and assessment methods for informal knowledge and competence transfer.

Doctor **Habilitatus Juris Borzovs** is a Professor and the Head of Computing Department at University of Latvia, Director and Chairman of the Board at Riga Information Technology Institute (RTTI), and Deputy President in Quality Affairs at a/s Exigen Services Latvia. He is also the founder and first president of Latvian Information and Communications Technology Association (LIKTA) and the founder and first president of Latvia Chapter of Information Systems Audit and Control Association (ISACA). Borzovs is a member of IEEE Computer Society and IEEE-Standards Association. His research interests include software engineering methods and standards, quality management, terminology, information technology education and training. Borzovs received a habilitation qualification (Doctor habilitatus) in Computer Science from University of Latvia in 1999. Contact him at University of Latvia, Computing Department; Raina bulv. 19, LV-1586, Riga, Latvia; Juris.Borzovs@lu.lv

**Adriana Schiopoiu Burlea** is a Professor of human resources management at the University of Craiova, Faculty of Economics and Business Administration, Romania. Her research interests include computer ethics, corporate social responsibility, online education, human behavior in designing, implementing, and applying IT. She continues to focus on research that explores innovation processes using knowledge, organizational networking perspectives, management skills, competence and capability. Her research emphasizes a critical, practice-based understanding of the social aspects of knowledge management, and organizations networked relations. She has published more than 75 journal articles and conference papers, as well as numerous books and book chapters in the areas of human resource management, information systems, corporate social responsibility, human capital and intellectual capital.

**Sten Carlsson** has a Ph.D. in Information Systems from Karlstad University (2000). His research focus is on communication and learning in systems development. As senior lecturer at the department of Information Systems at Karlstad University, Sweden, he is a supervisor for doctoral students. He is involved in the Life World Group at Gothenburg University where his research interest concerns phenomenological and philosophical questions about what understanding of computers and system development means as ontological questions. His publication of research articles has concerned different contexts like electronic commerce, system development and models, using computers at school in a didactical perspective, the problem of interpretation of the usability of computers and prototyping.

**Lichun Chiang** is an Associate Professor at the Department of Political Science in the National Cheng Kung University, Tainan, Taiwan. Her interest research topics are e-government, public administration and information technology. She may be reached at e-mail: lcchiang@mail.ncku.edu.tw.

Prof. Doctor **Habilitatus Witold Stefan Chmielarz** is a lecturer and researcher at Faculty of Management of University of Warsaw. He studied economy at Faculty of Economy, University of Warsaw, where he obtained his M.Sc. for the thesis “Effectiveness of IT using in Polish Airlines“. Next he worked at Institute of Systems Research of Polish Academy of Science. In 1984 he received his Ph.D. degree in management science from University of Warsaw for the thesis “Information Problems of Region Economy Modeling”. From this time he worked at University of Warsaw. He completed his habilitation in 1997. His habilitation work was on “Decision Support Systems: Model Aspects in Systems Construct-
"ing". He is Full Professor in economy from 2006 for the research work on "e-Banking Systems". His practical experience includes three years in several computer firms, as a designer and advisor. He also has consulting experience for banks and small and medium enterprises. His major research interests include e-commerce and e-banking. He has published over 100 articles, papers and books.

Prof. Doctor Habilitatus Dariusz Dziuba is working at Economics Faculty, Warsaw University (WU), as Chair of Information Systems and Economic Analysis Department. He studied at WU, and graduated from the Economics Faculty (1982). Since 1982 he has worked at WU. He received Ph.D. degree in economics for the thesis "Economic semiotics" at WU in 1989. He was habilitated in economics for the thesis "Economics of the information sector" at WU in 1999. He took part in the fellowships at Glasgow University, Scotland (1991/92) and at Universitat des Saarlandes, Saarbrucken (1993/95). He was the visiting professor at Aalborg University, Denmark (1988) and at Humboldt University (1990), Fachhochschule Heidelberg, Germany (1995). In 1992/93 he was the Director of the Department of Statistical Training and Foreign Cooperation in the Central Statistical Office of Poland. He was the Professor at Skarbek Graduate School of Business Economics, Department of Business Informatics, Warsaw (2003/04). He has numerous publications in the following areas: information economy, information society, economics of the information sector, business informatics, artificial intelligence and semiotics methods for analysis and synthesis of economic information systems, economics information, banking information systems, history of exchanges, auctions.

Michael Firopoulos is Project Manager in Intracom, a Greek information and communication technology solutions provider. As a specialist in the analysis and design of hospital information systems, he has worked as Hospital Information System Consultant and has led many national projects related to the provision of healthcare solutions for Greek hospitals. His most recent activities involved the development of an advanced system enabling the interoperability among the Greek hospitals and the public insurance organizations.

Janis Grundspenkis is a Professor of the Department of Systems Theory and Design and the Dean of the Faculty of Computer Science and Information Technology at Riga Technical University, Latvia. He received a qualification in electrical engineering from Riga Polytechnical Institute in 1965, a Dr.sc.ing. degree in 1972 and a Dr.habil.sc.ing. degree in 1993, both from Riga Technical University. His research interests are: integration of intelligent agent and multiagent techniques with knowledge management approach for the development of intelligent tutoring, business process management and logistics systems, and mathematical methods for the analysis of complex system structure. He has about 200 publications in these and related areas. In 2006 he received the award as “RTU scientist 2006”. He teaches several courses of Systems Theory and Artificial Intelligence. He is an affiliate member of IEEE Computing Society and a professional member of Association for Computing Machinery.

Prima Gustiené is a lecturer at the department of Information Systems at Karlstad University, Sweden. She holds a high education diploma in Information Systems from Karlstad University. She is a member of the research group at Karlstad University on Enterprise System Architecture. Her research interests include the Pragmatic and Semantic aspects of Information System Development, Enterprise Modeling and Graphical Representations of business processes. She is involved in the development of the Pragmatic-driven method for service-oriented modeling of information systems. Prima Gustiené
participated in several research projects such as Models and Methods of Electronic Commerce and in the international project on new software technologies that was sponsored by the Japanese industry agency. Prima Gustiené is the author/co-author of more than dozen research publications. She is teaching Object-Oriented System Design and System Development courses.

Dr. Dimitrios Halkos is Research Associate in the Telecommunication Laboratory of the Institute of Communication and Computer Systems (ICCS), Athens, Greece. He graduated from the Dept. of Electrical and Computer Engineering of the National Technical University of Athens, Greece in 2001. In 2008 he acquired, from the same university, his Ph.D. in the area of Maritime Operational Research with a focus on cargo ships routing and scheduling. He has been involved in several EU and national funded projects and his research interests include implementation of routing and scheduling algorithms and multi-criteria decision support systems. He has also worked as technical manager, consultant and software engineer in private sector.

Prof. Igor Hawrysikiewycz completed a BE and ME degrees in Electrical Engineering at the University of Adelaide, and a PhD degree at the Massachusetts Institute of Technology. He has developed methods for the design of systems emphasizes which over time covered database design, information systems design and currently focuses on developing requirements for collaborative systems and supporting them with technology that integrates collaboration into the business process. His work has included both research as well as industrial applications and has been reported in over 150 publications and 3 text books.

Marcin Hernes is a Ph.D. student of Management, Computer Science and Finance Department of Wroclaw University of Economics, a university teacher of Academy of Management in Lodz (Poland). He is the author and co-author of many articles published in national and international publishing houses. Moreover, he is a participant of scientific national and international conferences, a lecturer of the issues that concern distributed decision support systems, conflicts in multi-agent systems, the methods of consensus, negotiation and cooperation, the systems of deductive and temporary data bases, and the systems of coordination and visualization. Marcin Hernes is a practitioner (of many years) in the scope of management systems, coordination and automation of production processes, digital systems of measurement, systems of distributed data bases, and multi-agent decision support systems. Apart from that, he is the author of several dozen computer applications that function in industrial enterprises or state-owned institutions.

Ms. Bree E. Holtz holds a Master of Science degree in Analysis, Design, and Management of Information Systems from the London School of Economics (London, UK), along with a Bachelor's degree in Telecommunications from Michigan State University. She is currently a doctoral candidate in the Media and Information Studies program at Michigan State University where she studies technology in healthcare as well as peoples’ perceptions and adoption of technology in the health setting. Currently, Ms. Holtz is a Site Coordinator and researcher for Midwest Alliance for Telehealth and Technology Resource Center (MATTeR). She also is a research assistant for many e-Health initiatives through the Telehealth Research Lab at Michigan State University. Previously, Ms. Holtz worked for CoreComm as a Project Manager and Business Analyst in the development of new products and formation of external partnerships.
Dimitris Kanellopoulos holds a Ph.D. in multimedia communications from the Department of Electrical and Computer Engineering of the University of Patras, Greece. He is a member of the Educational Software Development Laboratory (ESDLab) in the Department of Mathematics at the University of Patras. His research interests include multimedia communications, intelligent information systems, knowledge representation and web-based education. He has authored many papers in international journals and conferences at these areas. He serves as an Editor in ten scientific journals.

Dr. Jure Kovač is the Associate Professor of organization and management at the Faculty of Organizational Sciences, University of Maribor. His teaching and research interest are: organization theory, organization design, management and project management.

Dr. Michael Mackert’s current research focus is on health literacy, with a particular interest in the best ways to design health messages to reach low health literate populations. This work applies to both new digital media (e.g., e-health interventions designed specifically for low literate and low health literate audiences) and traditional media (e.g., health literacy issues in direct-to-consumer pharmaceutical advertising). Other research interests include telemedicine implementations to provide healthcare services at a distance, the role of trust in communication and advertising, and mass media/interpersonal impacts on healthy behaviors.

Antons Mislevics is a research assistant and Ph.D. student of the Department of Systems Theory and Design of the Faculty of Computer Science and Information Technology at Riga Technical University. He received an M.Sc. degree in computer systems from Riga Technical University in 2007. His research interests are intelligent agents and business process management. He has participated in several projects in the area of multiagent systems development, and also is developing a software tool for plagiarism detection in students’ individual works. He is working for Microsoft Latvia as a Development Consultant, specializing in collaboration platforms and solutions for business process management.

Judit Olah has been a researcher and a practitioner in the area of interactive information retrieval and information management. She graduated from Rutgers University, School of Information, Library and Communication Studies in 2003; her dissertation focused on modeling user behavior in interactive information retrieval. Since then she continued to focus on the role and efficiency of information interactions and access to information sources in a variety of user environments: educational, corporate and non-profit settings.

Dr. rer. nat. Claus-Peter Rückemann studied geophysics, computer science, geosciences, and archaeology with strong interests in scientific information systems and distributed and High Performance Computing. He received his university diploma in geophysics and his doctorate diploma in geosciences, informatics, and geoinformatics from the Westfälische Wilhelms-Universität (WWU) Münster, Germany. Dr. Rückemann teaches information systems and security in the European Legal Informatics Study Programme at the institute for legal informatics, Leibniz Universität Hannover (LUH), Germany. He is leading scientific advisor for national and international projects. For the last fifteen years he worked for scientific institutes and computing centers as lecturer, project manager, scientific author, coordinator and project leader of interdisciplinary research projects and as initial coordinator of the sections Monitoring, Accounting, and Billing, for establishing the German D-Grid in the German e-Science Initiative. As
scientific member of the WWU and LUH he currently works for the North-German Supercomputing Alliance (HLRN) and the Computing Centre of the LUH.

Dr. Brane Semolic is the head of Project & Technology Management Institute, he is the International Project Management Association, IPMA assessor for Project Management, PM competences, and the assessor for IPMA project award, as well as the International Cost Engineering Council ICEC Distinguished International Fellow, and Professor of project and program management, technology management, management of virtual network organizations on graduate and postgraduate level at the University of Maribor, Cranefield College and visiting professor in many international programmes.

Gabriel Sideras received his diploma from the Informatics department of the Athens University of Economics and Business (AUEB) in 2006. He has worked in the private sector as software developer and consultant, while currently he is a Research Associate in the Telecommunications Laboratory of the National Technical University of Athens. His research interests include e-health and system interoperability within the healthcare sector.

Dr. Darja Smite is an Assistant Professor and a Senior Researcher in Software Engineering at Blekinge Institute of Technology, and an Assistant Professor at University of Latvia. She also works as an IT consultant at Riga Information Technology Institute in Latvia. Her research interests include global software engineering, benefits and challenges of outsourcing and offshoring software work, team coordination and software process improvement. Smite received a Ph.D. in Computer Science from University of Latvia in 2007. Contact her at Blekinge Institute of Technology; School of Engineering (APS), SE-37225, Ronneby, Sweden; Darja.Smite@bth.se, or University of Latvia, Computing Department; Raina bulv. 19, LV-1869, Riga, Latvia; Darja.Smite@lu.lv

Jadwiga Sobieska-Karpińska is a Professor of Wroclaw University of Economics, a head of Economic Communication Department; she has been a deputy dean of Management, Computer Science and Finance Department twice, a member of the senate, a chairwoman of Curriculum Council of Scientific Works in the domain of economic computer science. Moreover, she is the editor of the book series: “Computer Science in Management”, a Professor of the Academy of Management in Lodz (Poland), a dean of the non-resident department. She has been a former head of Silesian International Business School; a Doctor Habilitatus in economic sciences in the scope of economics and computer science. Apart from that, Jadwiga Sobieska-Karpińska specializes in the domains of economic computer science, economic communication, e-business, computer decision support systems, and information society. Furthermore, she is a member and a founder of the Polish Scientific Society of Business Informatics, the author and co-author of 209 scientific works, inter alia, books and reports on international conferences.

Prof. Doctor Habilitatus Henryk Sroka is the Director of the Department of Informatics at the Karol Adamiecki University of Economics in Katowice, Poland. His research interests cover Decision Support Systems, methodologies of information systems development, expert Systems and integrated information systems implementation. He focuses on business process reengineering and information systems strategy development for business organizations. In his publications he considers the problems of information society and global information economics as well as e-business models. He teaches
several courses of Decision Support Systems and e-Business Strategy and Models. He is the President of the Polish Scientific Society of Business Informatics.

Prof. Doctor Habilitatus Bogdan Stefanowicz (1937) received university degree in mathematical statistics at the Warsaw University. He is a scientific researcher at the Warsaw School of Economics, Department of Business Informatics. He is a member of several scientific societies in Poland. He is the author of over 120 publications on information, information processing and systems, programming, and the related issues. The main areas of his interest are as follows: infological interpretation of information (its properties, variety, functions, quality); information processes; business information systems; Artificial Intelligence methods in business.

Prof. Theodora A. Varvarigou received the B. Tech degree from the National Technical University of Athens, Athens, Greece in 1988, the Ma.E. degrees in Electrical Engineering (1989) and in Computer Science (1991) from Stanford University, Stanford, California in 1989 and the Ph.D. degree from Stanford University as well in 1991. She worked at AT&T Bell Labs, Holmdel, New Jersey between 1991 and 1995. Between 1995 and 1997 she worked as an Assistant Professor at the Technical University of Crete, Chania, Greece. In 1997 she was elected an Assistant Professor and since 2007 she is a Professor at the National Technical University of Athens, and Director of the Postgraduate Course “Engineering Economics Systems”. Prof. Varvarigou has great experience in the area of semantic web technologies, scheduling over distributed platforms, embedded systems and grid computing. In this area, she has published more than 150 papers in leading journals and conferences. She has participated and coordinated several EU funded projects.

Pamela Whitten, Ph.D., is a Professor in the Department of Telecommunications and an Associate Dean in the College of Communication Arts & Sciences at Michigan State University. In her faculty position, Dr. Whitten is responsible for conducting technology and health-related research, as well as teaching graduate and undergraduate courses. Dr. Whitten’s research focuses on the use of technology in health care with a specific interest in telehealth and its impact on the delivery of health care services and education. Prior research projects range from telepsychiatry to telehospice and telehome care for COPD and CHF patients. In addition to her work assessing outcomes and impacts of telemedicine, she also conducts research that examines innovative uses of mediated communication to reach underserved populations, such as the creation of health websites for low literate adults.
