About the Authors

**George D. Magoulas** is a reader in the School of Computer Science and Information Systems at Birkbeck College, University of London, UK. Dr. Magoulas was educated at the University of Patras, Greece, in electrical and computer engineering (BEng/MEng, PhD), and hold a post graduate certificate in teaching and learning in higher education from Brunel University, UK. He has secured research grants from the UK Engineering and Physical Sciences Research Council, the Arts and Humanities Research Board and the Joint Information Systems Committee, and has published more than 130 research articles in leading international journals and conferences. He co-edited the volume “Adaptable and Adaptive Hypermedia Systems” which was published by IRM Press, and guest edited two special issues in the area of personalized systems for the journal *Interacting with Computers* and the *Journal of Network and Computer Applications*. Dr. Magoulas is on the board of special reviewers of the archival journal *User Modeling and User-Adapted Interaction*, a member of the IEEE, the User Modeling, Inc., the Technical Camber of Greece, and the Hellenic Artificial Intelligence Society. His Web page is at http://www.dcs.bbk.ac.uk/~gmagoulas.

**Sherry Y. Chen** is a senior lecturer in the Department of Information Systems and Computing at Brunel University. She obtained her PhD from the University of Sheffield in the UK (2000). She was the guest editor for the special issue on Individual Differences in Web-based Instruction of *The British Journal of Educational Technology*. Her major research interests focus on personaliza-
tion and human-computer interaction. In recent years, she has attempted to
develop personalised Web-based applications that can accommodate users’
individual differences. She is the principle investigator of three research projects:
[a] human factors in the design of adaptive hypermedia systems: funded by the
Engineering and Physical Sciences Research Council (EPSRC); [b] cognitive
approach to adaptive user interface for search engines (CAUSE): funded by
Brunel Research Initiative & Enterprise Fund (BRIEF); and [c] cognitive
personalised interfaces for Web-based library catalogues: funded by the Arts
and Humanities Research Board (AHRB). For more information, visit her Web
page at http://www.brunel.ac.uk/~csstyc.

* * *

**Jacopo Armani** has a Masters in Computer Engineering from the Politecnico
di Milano and is a PhD candidate in communication sciences at the Università
della Svizzera italiana with a thesis on the authoring tools of educational adaptive
hypermedia systems, Switzerland. He has been a consultant for several private
companies and institutions as a Web engineer and graphic designer since 1998.
His main research interests involve adaptive hypermedia systems, graphical
interfaces, modelling languages for the Web, and visual communication.

**Luca Botturi** has a Masters in Communication Sciences and Communication
Technologies and a PhD in communication sciences and instructional design. He
is currently an instructional designer at the eLab—eLearning Laboratory
(www.elearninglab.org)—where he works on several e-learning development
projects. He is also a researcher for the NewMinE Lab—New Media in
Education Laboratory (www.newmine.org)—and coordinator of the Masters
program in Communication, Major in Education and Training for the ICeF—
Istituto Comunicazione e Formazione (www.icef.com.unisi.ch)—at the Università
della Svizzera italiana in Lugano, Switzerland. His research activity focuses on
effective course design with new technologies and design team communication.

**Ana M. Breda** is an associate professor with the Department of Mathematics
of the University of Aveiro, Portugal, and a senior researcher of the group
“Algebra and Geometry” at the R&D Unit “Mathematics and Applications” of
the same university. She earned her BSc in mathematics from the University of
Coimbra (1982), her MSc in mathematics (1986) from the same university, and
a PhD in mathematics from the University of Southampton, UK (June 1989).
Breda’s research interests focus on geometry, combinatorics, and didactics. She
is currently engaged in the research project Geometrix whose main purpose is
the conception and implementation of educational hypermedia systems to be used in schools/universities.

**Anders Broberg** (bopspe@cs.umu.se) has a PhD from the Department of Computing Science at Umeå University, Sweden. His research interests include computer supported learning, information visualisation, information retrieval, emergence, emergent interaction, and tools for knowledge work.

**Gladys Castillo** is an assistant in the Department of Mathematics of University of Aveiro, Portugal, and a researcher in the Laboratory of Artificial Intelligence and Computer Science (LIACC) of the University of Porto. She earned her master’s degree in mathematics from the Faculty of Mathematics and Mechanics of St. Petersburg State University (1986). Currently she is working on her PhD, focusing on the application of machine learning and probabilistic reasoning in user modelling, incremental learning of Bayesian Networks Classifiers and adaptive methods to deal with changing environments.

**A. Cristea** earned her IS Dr. title and worked at the University of Electro-Communications, Tokyo, Japan. She is presently an assistant professor in the IS Group, Faculty of Mathematics & Computer Science, Eindhoven University of Technology, The Netherlands. Her research interests include AEH and adaptive hypermedia authoring, UM, Semantic Web, AI, neural networks, adaptive systems, concept mapping, ITS, and Web-based educational environments. She authored and co-authored more than 100 research papers and course booklets. She is a member of IEEE, was program committee member of Hypertext, AH, ICCE, ICAI, IKE (a.o.) and was reviewer or session chair for many conferences; she is executive peer reviewer of the *ET&S Journal*.

**Marek Czarkowski** is a PhD student at the School of Information Technologies, University of Sydney, Australia. His research focus is exploring ways to provide user support for scrutinising and controlling an adaptive hypertext. He is a member of the Smart Internet Technology Research Group which conducts research in user-adapted systems, customisation, and delivery of multi-media objects.

**José Palazzo M. de Oliveira** is a full professor of computer science at Federal University of Rio Grande do Sul — UFRGS, Brazil. He has a doctorate degree in computer science from Institut National Politechnique — IMAG (1984), Grenoble, France; an MSc in computer science from PPGC-UFRGS (1976); and
graduated in electronic engineering in 1968. His research interests include information systems, e-learning, database systems and applications, conceptual modelling and ontology, applications of database technology, and distributed systems. He has published about 160 papers and has been an advisor of 10 PhD and 45 MSc students.

**Jing Ping Fan** is a doctoral researcher in the School of Information Systems, Computing and Mathematics at Brunel University, UK. Her research interests focus on interface design of hypermedia learning systems. She has a background in information systems and education.

**Claude Frasson** is professor of computer science at the University of Montreal, Canada. Dr. Frasson specializes in the study of intelligent agents, intelligent tutoring systems, and e-commerce. He also is a director of GRITI (Inter-university Research Group in Intelligent Tutors), grouping seven universities in Quebec and about 75 researchers, and the director of the HERON at University of Montreal. He earned his PhD in computer science from the University of Nice, France (1974). He is co-founder of the international conference of Intelligent Tutoring System (ITS), as well as on the steering committee of a lot of conferences on ITS domain and e-commerce. In addition to the dozens of research papers in scientific conferences and journals, he was a co-editor of a lot of books on the intelligent tutoring system domain.

**João Gama** earned a PhD in computer science from the University of Porto, Portugal (2000). He is currently auxiliary professor at the Faculty of Economics of University of Porto and a researcher at the Laboratory of Artificial Intelligence and Computer Science (LIACC) of the same university. His research is on machine learning, focusing in multiple learning models, incremental learning methods, and drift detection.

**Boris Gauss** is a researcher at the Center of Human-Machine-Systems, Berlin Technische Universität Berlin. He earned his degree in psychology in 2000, specialised in cognitive psychology and ergonomics. Since 1997, he has been doing research on human factors in different domains like aircraft evacuation, air traffic control, chemical engineering, and ship operation. He is a coordinator of the “European Network for E-Learning in Process and Chemical Engineering” (EuPaCE.net) and has gained experience in the development and evaluation of e-learning materials for engineering education. His research interest is in human-centred design and evaluation of human-machine systems.
Agoritsa Gogoulou is a PhD student in the area of didactics of informatics at the Department of Informatics and Telecommunications of the University of Athens. She earned her BA in computer science from the University of Crete and her MSc in advanced information systems from the University of Athens. Her research interests lie in the areas of didactics of Informatics, computer-based collaborative learning environments, Web-based adaptive and intelligent educational systems, learner modelling and assessment methods and tools. Her PhD research focuses on the development of Web-based adaptive tools supporting exploratory and collaborative learning in informatics.

Evangelia Gouli is a PhD student in the area of distance and open education with the Department of Informatics and Telecommunications of the University of Athens. She received her BA in mathematics from the University of Athens and her MSc in computer science from the University of Essex, UK. Her research interests lie in the areas of Web-based instruction, assessment methods and tools, Web-based adaptive and intelligent educational systems, learner modelling and computer-based collaborative learning environments. Her PhD research focuses on the development of a Web-based adaptive assessment environment providing personalised support and feedback.

Maria Grigoriadou is an associate professor of computer science at the University of Athens and director of the Educational and Language Technology Laboratory with the Department of Informatics and Telecommunications, University of Athens. Dr. Grigoriadou earned her BA in physics from the University of Athens and her MSc and PhD degrees in computer science from the University of Paris VII. Dr. Grigoriadou has worked in the fields of intelligent tutoring systems, adaptive educational hypermedia systems, student and open learner modelling, distance learning, educational software, and natural language processing. She has authored more than 100 technical papers.

Natasa Hoic-Bozic is an assistant professor with the Department of Information Science, Faculty of Philosophy, University of Rijeka, Croatia. She earned a PhD in computer science at the Faculty of Electrical Engineering and Computing, University of Zagreb, Croatia. She currently lectures on multimedia systems, seminar on hypermedia, and teaching methods in information science. Her main research interests include information and communication technology (especially hypermedia and Internet) in education. She participated in several research projects, including: innovations in computer assisted education, the quality of teaching in higher education, adaptive hypermedia courseware, and computing support to education. Currently she is a principal researcher of the project “Teaching Methods in Information Science Online”.

Michael J. Jacobson is the senior associate director and an associate professor at the Korea University Center for Teaching and Learning in Seoul, Korea. Previously, Dr. Jacobson held faculty and research positions at the University of Illinois at Urbana-Champaign, Vanderbilt University, and The University of Georgia, and he has been involved with organizational and international consulting activities. His research has focused on the design of learning technologies to foster deep conceptual understanding, conceptual change, and knowledge transfer in challenging conceptual domains. Most recently, his work has explored cognitive and learning issues related to the design of learning technologies to help students understand new scientific perspectives emerging from the study of complex and dynamic systems. He will join the faculty at the Singapore National Institute of Education in the fall of 2005 where he will also serve as a senior researcher in the Learning Sciences Lab.

Marc Kaltenbach is a professor in the Williams School of Business and Economics at Bishop’s University, Canada. He has a diploma from the Hautes Études Commerciales, Paris and earned his Masters of Arts at Yale, France. He earned his PhD from the University of Toronto in the Department of Electrical Engineering “Control Systems”, Canada. He has co-authored papers in conferences and journals on the intelligent agent tutoring system, as well as he is in the steering committee of an ITS conference and others.

Judy Kay is an associate professor at the School of Information Technologies at the University of Sydney, Australia. She is a principal in the Smart Internet Technology Research Group, which conducts fundamental as well as applied research in user-adapted systems. The core of her work is to represent and manage personalisation that ensures the user can maintain control, being able to scrutinise and control the whole process of personalisation: the user can determine what is modelled about them, how this is managed and how it is used.

Robert D. Macredie is a professor of interactive systems and Head of the School of Information Systems, Computing and Mathematics, Brunel University, UK. Macredie’s key interest lies in the way in which people and organisations use technology, and his research aims to determine how work can be more effectively undertaken by improving the way that we understand how people and technology interact in organisational settings. He has undertaken work on a range of issues associated with people, technology, and organisations and has more than 150 published research contributions in these areas.

Vedran Mornar is a professor of computer science with the Faculty of Electrical Engineering and Computing, University of Zagreb, Croatia, where he
currently teaches several graduate and undergraduate computing courses. He graduated and received his PhD in computer science from the same university. As a Fulbright scholar, he studied at the University of Southern California, Los Angeles, for an academic year. His professional interest is in application of operational research in real world information systems, database design, development, and implementation. He is an editor of international journal “Computing and Information Technology”.

**Kyparisia A. Papanikolaou** works as a research assistant with the Department of Informatics and Telecommunications, University of Athens. She is also affiliated with the Department of Technology Education and Digital Systems, University of Piraeus, Greece. She earned her BA and MSc in informatics from the University of Athens. Her PhD thesis focused on the design and development of adaptive educational hypermedia systems. Her primary research interests lie in the areas of adaptive educational hypermedia systems, instructional design for Web-based education, learner modelling, cognitive science, and artificial intelligence in education.

**Mohammed A. Razek** is an assistant professor of computer science at the Al-Azhar University, Cairo, Egypt. He earned his PhD in computer science from the University of Montreal, Canada. His MSc in computational mathematics was awarded from Al-zhar University, Egypt. He has co-authored papers in mainstream scientific conferences and journals on the applications of the intelligent agent on information retrieval and Web-based education. He was awarded the best student paper award at the WWW2003 conference, Hungary.

**Maria Aparecida M. Souto** is an associate professor of computer science at the Federal University of Rio Grande do Sul – UFRGS (Brazil). She has doctor degree in computer science (2003), and an MSc in computer science (1992) from PPGC-UFRGS, Porto Alegre, Brazil. She graduated in mathematics (1979) from UFRGS. Her research interests include learner modelling, learning environments on the Web, adaptive and hypermedia systems, knowledge acquisition.

**Marcus Specht** earned his diploma in psychology (1995) and a PhD from the University of Trier on adaptive learning technology (1998). Specht currently works as a post-doc researcher at the GMD German National Research Center for Information Technology. He has rich experience in intelligent tutoring systems and the integration of ITS and Web-based tutoring from former projects in the field of adaptive hypermedia and ITS (ELM-ART, InterBook, AST). His main research interests are adaptive learning and training systems, knowledge
management, contextualized computing, and intelligent interfaces. He coordinated the technical development of a highly scalable e-learning platform for design and architecture in the WINDS project of the IST program of the fifth framework and was involved in the LISTEN project on audio augmented environments.

**Craig Stewart** is a research student in the School of Computer Science and Information Technology at the University of Nottingham, and a member of the Web Technologies Research Group. His research subjects include e-learning, adaptive hypermedia, and internationalization of educational materials and contexts. He has published 12 papers and been a reviewer for three international conferences.

**Ing. Leon Urbas** is spokesperson of the Center of Human-Machine-Systems, Technische Universität Berlin. After his PhD study on using simulators and the internet for operator training in chemical plants, he gained a three-year professional background on data driven process modelling, process optimization, engineering of process information systems, and management of automation projects at a leading global player in fine chemistry. Since October 2000, he has been the head of a research group that is sponsored by VolkswagenStiftung. His research interest is in user modelling and other suitable methods for the early stages of design, analysis, and evaluation of human-machine systems.

**Regina Verdin** is a psychologist and research assistant at Federal University of Rio Grande do Sul – UFRGS (Brazil). She has a master’s degree in social psychology and personality at PUCRS – Pontifical Catholic University of Rio Grande do Sul (Brazil). She has been a researcher for the Brazilian National Research Council (CNPq) since 1994. Her research interests include distance education, computers and education, cognitive student modeling, adaptive hypermedia systems, and tutoring intelligent systems.
