About the Contributors

**Zongwei Luo** is a senior researcher at the E-business Technology Institute, The University of Hong Kong (China). He also served as the Affiliate Senior Consultant to ETI Consulting Limited. His research has been supported by various funding sources, including China NSF, HKU seed funding, HK RGC, and HK ITF. His research results have appeared in major international journals and leading conferences. He is the founding Editor-in-Chief of the International Journal of Applied Logistics and serves as an associate editor and editorial advisory board member in many international journals. Dr. Luo’s recent interests include applied research and development in the area of service science and computing, innovation management and sustainable development, technology adoption and risk management, and e-business model and practices, especially for logistics and supply chain management.

* * *

**Albert K. Toh** is an associate professor of psychology in the Departments of Social & Behavioral Sciences, University of Arkansas at Pine Bluff. He received his MSc. Degree in applied psychology from Aston University, UK, and Ph.D. in Human Factors/Psychology from University of South Dakota (1983). He was a visiting scientist at the Cognitive Science Lab of Catholic University of America, and has held academic positions in Nebraska and Ohio. Prior to the academia, he has previously worked as a Human Factors professional in the US Department of Transportation and various consulting companies in the areas of traffic safety and applied cognitive research. His current research interests include Human Factors in supply chain/logistics, collaborative e-commerce, and risk perception and analysis.

* * *

**Alvin Hovde** is a Senior Freight and Security Operations Analyst with Science Applications International Corporation (SAIC). Most of his work involves support to US and State Government agencies, where he provides analysis of supply chain operations and security in the surface and maritime transportation systems. He participates in transportation security projects aimed at reducing congestion and vulnerabilities, as well as introducing intelligent transportation system (ITS) technologies to transportation system end-users. He is well-versed in requirements pertaining to the US Maritime Transportation Security Act (MTSA) and International Ship and Port Facility Security (ISPS) Code and has been involved in projects world-wide requiring their implementation, including technical support to the International Standards Organization. Prior to joining SAIC, Mr. Hovde spent over 20 years as a career officer in the US Navy. He possesses a BA in Economics from Roanoke College and a MS in General Administration from Central Michigan University.
About the Contributors

Anthony Vance is an assistant professor in the Information Systems Department at the Marriott School of Management, Brigham Young University. He earned his PhD in Computer Information Systems from Georgia State University and the University of Paris—Dauphine. He received a BSc in IS and Masters of Information Systems Management (MISM) from Brigham Young University, during which he was also enrolled in the IS Ph.D. preparation program. Prior to his PhD studies, Anthony worked as an IT security consultant for Deloitte. His work is published or is forthcoming in *MIS Quarterly, Journal of Management Information Systems, and European Journal of Information Systems*. His research interests are IS security, trust in IS, internal control, and international issues in information systems.

Daniel O’Leary is a Professor in the Marshall School of at the University of Southern California (USC), focusing on information systems, including enterprise resource planning systems and knowledge management systems. Dan received his Ph. D. from Case Western Reserve University. He received his masters from the University of Michigan and his bachelor’s degree from Bowling Green University (Ohio). He is the former editor of IEEE Intelligent Systems and John Wiley’s International Journal of Intelligent Systems in Accounting, Finance and Management. His book, Enterprise Resource Planning Systems, published by Cambridge University Press, has been translated into both Chinese and Russian. Professor O’Leary has published research in a broad base of publications, including Management Science, Decision Science, European Journal of Operations Research, Interfaces, Journal of Management Information Systems, IEEE Computer, IEEE Intelligent Systems, International Journal of Human Computer Studies, and a number of other journals.

David M. Wasielewski is an assistant professor of Business Ethics and Management in the Palumbo-Donahue School of Business at Duquesne University. Wasielewski teaches courses in business ethics, organizational behavior, public affairs management, and information ethics. His recent research is on individuals’ biological propensity for ethical behavior and its effect on workplace social contract relationships. His other research interests include work on moral intensity, cognitive moral development, stakeholder agenda-building, and policy learning. His articles have been published in *Business and Society, Journal of Corporate Citizenship, Ethics and Information Technology, Journal of Business Ethics, and Business and Society Review*.

Dominique Fresneau received his BSc in Psychology and Physiology from Tours University, his MSc in Ethology from the University Paris V, Sorbonne and his PhD degrees and the HDR (Habilitation à Diriger des Recherches) in Ethology from the University of Paris13, 1994. He is currently a Full Professor in Ethology with research interest in social behavior of neotropical ants. He has published 140 papers in refereed journals, conference proceedings or as contributions in books. Professor Dominique Fresneau is the head of social hymenopter research team and the Director of Laboratory of Experimental and Comparative Ethology (LEEC) in the Paris 13 University.

Edward D. McCormack is both a Research Assistant Professor in Civil and Environmental Engineering and a Senior Research Engineer with the Washington State Transportation Center (TRAC) at the University of Washington in Seattle, USA. His areas of research involve the use of technology to improve transportation mobility and security. His projects include using GPS systems to track performance of trucks on roadways and exploring the use of transponders to facilitate container movement through ports and international borders. Dr. McCormack has also worked for an engineering consulting firm running
transportation models and as a transportation planner for a regional planning agency. He received his master’s degree in Civil Engineering and Ph.D. in Geography from the University of Washington.

Emmanuel Fragnière is Service Operations Management and Risk Management Professor at the Geneva School of Business Administration (HEG). He is head of LEM-HEG, an institute specialized in market researches. He is a Lecturer in Management Science at the School of Management of the University of Bath (United Kingdom). He previously occupied senior positions in risk management (Banque Cantonale Vaudoise, the fourth largest bank of Switzerland and Cargill). His research interests are primarily in risk management and knowledge-based services design and control. His previous research appears in European Journal of Operations Research, Management Science, Interfaces and Environmental Modeling and Assessment.

Erwin Fielt is currently a member of the Business Process Management Group of the School of Information Technology at the Queensland University of Technology, Australia. In his research, he focuses on the intersection between business and ICT where new ICT applications have to result in net benefits for individuals and organizations. Erwin Fielt works as Postdoctoral Research Fellow in the Business Service Management project of the Smart Services CRC. Within this project, he is responsible for coordinating the involvement of the different academic and industry partners and he conducts research on Service Oriented Business Models, Service Portfolio Management and Service Quality Management. Erwin Fielt has a PhD from the Delft University of Technology and a MSc from the University of Twente, both in the Netherlands.

Frank Tong is the Director of Research and Development, Logistics and SCM Enabling Technologies Research Center, Hong Kong.

G.R. Gangadharan is a research scientist at Novay (Telematica Institute), Enschede, The Netherlands. His research interests are mainly located on the interface between technological and business perspectives. His research interests include Service Oriented Architectures and Cloud Computing, Enterprise Information Systems, Business Models of Software & Services, Sourcing of Information Systems and Services, and Free/Open Source Systems. Gangadharan has published several research papers in international journals, conference proceedings, and book chapters. He is codesigner of ODRL-S, a language for describing service licenses. He has a PhD in information and communication technology from the University of Trento, Trento, Italy, an MS in information technology from the Scuola Superiore Sant’Anna, Pisa, Italy, and an MSc in computer science from Manonmaniam Sundaranar University, Thirunelveli, India. Gangadharan is a member of the IEEE society. He can be reached at gr@novay.nl.

Gong Li, presently a PhD student majoring in Industrial Engineering at North Dakota State University, won his B.E. degree of Mechanical Engineering and M.E. degree of Mechatronic Engineering in 1996 and 2003, respectively, from China University of Mining and Technology, China. Having accumulated more than ten years’ research experience, Mr. Li’s research interests include green supply chain management, advanced manufacturing technology, electromechanical integration technology, process simulation and optimization, etc. His current research topic of dissertation focuses on the applications of IE technology in wind energy conversion systems.
Guénaël Cabanes is a PhD student in Computer Science at the University of Paris 13, France. He received a MSc in Ecology, Ethology and Evolution from the University of Rennes 2, France, in 2006. He also received a MSc in Computer Model of Reasoning and Knowledges from the University of Paris 13 in 2007. His primary research interests are in data mining, unsupervised learning, complex structures and dynamic of social groups.

Jeffrey A. Ogden is an assistant professor of Logistics and Supply Chain Management in the Operational Sciences Department at the Air Force Institute of Technology. He received a BSc in Accounting from Weber State University and an MBA and PhD in supply chain management from Arizona State University. Professor Ogden’s research interests include supply chain management, supply base reduction, e-marketplaces, RFID, strategic purchasing, and quality management. He recently co-authored a textbook entitled *Supply Chain Management: From Vision to Implementation*. He has published in many supply chain management journals including *The Journal of Supply Chain Management*, *The Journal of Business Logistics*, *The International Journal of Physical Distribution and Logistics Management*, *The International Journal of Logistics Management* and *The International Journal of Operations & Production Management*. In 2001, he was awarded the Institute for Supply Management’s Doctoral Dissertation Grant for his research into the antecedents, processes, and benefits of supply base reduction.

Jing Shi received his Ph.D. in industrial engineering from Purdue University, West Lafayette, IN, USA in 2004. He is currently an Assistant Professor in the Department of Industrial Engineering at North Dakota State University, Fargo, ND, USA. His research interests include wireless sensor network/RFID, structure health monitoring, mathematical modeling for renewable energy and health care systems, and micro/nano manufacturing. He has authored more than 50 papers on these topics, which have been published in referred journals and conference proceedings. Dr. Shi is a member of IEEE, IIE, and ASME.

Joyce M.W. Low is a Research Fellow in the National University of Singapore. She received her Bachelor’s and Master’s degrees from the Business School before obtaining her PhD degree in 2009 from the same university. Parts of her doctoral dissertation have been published in respectable journals such as *Journal of Air Transport Management*, *Transportation Research Parts A and E*, *Networks and Spatial Economics* and *International Journal of Production Economics*. She is also an active reviewer for a number of international journals in the disciplines of transportation, logistics and economics.

Jürgen Dorn studied computer science and economics at Technische Universität Berlin. He received his Ph. D. from Technische Universität Berlin in 1989 for a thesis on knowledge-based reactive robot planning. From 1989 to 1996, he was head of a group at Christian Doppler Laboratory for Expert Systems in Vienna that has developed several scheduling expert systems for the Austrian steel industry. He is now professor of business information systems at Vienna University of Technology. His current interests are in Semantic Web, Service Science and Competence Management.

Li Wenli earned her Ph. D. degree from the University of Hong Kong with an emphasis in supply chain management. Now she works as an associate professor in Shenzhen Tourism College of Jinan University. Her research interests cover supply chain management, revenue management, service management and service marketing.
Luo Jing earned her Master of Art majoring in English in Northwestern Polytechnic University of China with an emphasis on applied linguistics, translation and cross-cultural communication. Now she works as a teacher in Shenzhen Tourism College of Jinan University. Her research focuses on tourism English, business English and culture.

Magali Dubossen Torbay is Marketing Professor and Director of the Geneva School of Business Administration (HEG) where she teaches Services marketing and Marketing Strategy. She is also a Lecturer at Ecole Polytechnique Fédérale de Lausanne (EPFL, Switzerland) and Essec Management Education (Paris, France). How to price and distribute knowledge-based services are her core research areas. She is also working on the following academic topics: services marketing, internet business models, web 2.0 marketing, e-services, netnography, service risk management, and wealth management. Her previous research appears in Journal of Services Research (IIMT), Journal of Wealth Management and Thunderbird International Management Review.

Mairead Brady is a Lecturer in Marketing at the School of Business, Trinity College Dublin. She is a co-author of the European edition of Philip Kotler’s ‘Marketing Management’ text (2009). She has over 70 research publications including journal articles (e.g., the Journal of Marketing Management, Journal of Business and Industrial Marketing, International Journal of Technology Marketing, Management Decision), book chapters, and contributions at leading international conferences. Her interdisciplinary research focuses on the assimilation of information and communication technologies (ICT) into contemporary marketing practice (CMP), the role of technology in service organisations and along global supply networks (GSN), and issues of technology adoption. She actively consults with a variety of private and public organizations on marketing, branding and technology related issues.

Mark Jensen is a Senior Freight Analyst/Project Manager with Cambridge Systematics. He has more than 22 years of experience working on projects at the federal, state, and local/regional level, including major freight technology projects for the FHWA Office of Freight Management and Operations, the USDOT Intelligent Transportation Systems Joint Program Office, the FMCSA Office of Research and Analysis, the Office of the Secretary of Transportation, and for several DHS/TSA offices related to freight security and technology. Over the past decade, his work has focused on freight systems testing, freight operations and logistics performance measurement, intermodal freight congestion management, freight intelligent transportation systems and supply chain security. Mr. Jensen has also led nearly all of the USDOT-sponsored independent evaluations of freight technologies since the freight technology program was initiated in 1999.

Martin R. Fellenz received his Ph.D. from the Kenan-Flagler Business School at The University of North Carolina at Chapel Hill. He is Senior Lecturer in Organisational Behaviour and Director of Postgraduate Teaching & Learning at the School of Business, University of Dublin, Trinity College. He regularly consults with leading domestic and international firms. Much of this work is located at management board level and focuses on enabling client organizations to adapt to environmental, strategic and technological change, and on developing management capabilities to successfully lead and manage such changes. His research focuses on behavioural aspects of organisational change and transformation, in particular the implications of environmental and technological change for individuals, organisational design, and management processes and practices. In addition, he studies organisational justice and fair-
ness; managerial and organisational aspects of evolving global business systems (with a particular focus on service industries); and issues in higher education and management development.

**Masayuki Ueda** was born in Sendai City (Miyagi Prefecture), Japan in 1975. He earned a bachelor’s degree in commerce from Otaru University of commerce in 1999. And, he earned a master’s degree (2002) and a doctor’s degree (2006) in business administration from Hokkaido University. He belonged to the Venture Business Laboratory of Hokkaido University, where he was a part-time researcher from 2006 to 2009. He has been a part-time instructor at Sapporo University and Sapporo Gakuin University since 2007. His current research interests are focused primarily on decision support with non-mathematical problem description. He is a member of JSPM (The Japan Society for Production Management).

**Mordechai Gal-Or** is an assistant professor of Information Systems Management in the Palumbo-Donahue School of Business at Duquesne University. His current research interests focus on data mining and machine learning in various decision contexts. His work has been published in *Marketing Science, Management Science, Communications of the ACM, Rand Journal of Economics,* and *Information Fusion.* Gal-Or is a member of the Association for Computing Machinery (ACM), the IEEE Computer Society, and the Association for the Advancement of Artificial Intelligence (AAAI).

**Paul Benjamin Lowry** is an assistant professor of Information Systems at the Marriott School, Brigham Young University and a Kevin and Debra Rollins Faculty Fellow, where he also directs the IS PhD Preparation Program. His research interests include Human-Computer Interaction (HCI) (collaboration, culture, communication, adoption, entertainment, decision support, deception), e-commerce (privacy, security, trust, branding, electronic markets), and scientometrics of Information Systems research. He received his PhD in Management Information Systems (MIS) from the University of Arizona. He has published articles in the *Journal of Management Information Systems; Journal of the Association for Information Systems; Information Systems Journal; Communications of the ACM; Information Sciences; Communications of the Association for Information Systems; Decision Support Systems; IEEE Transactions on Systems, Man, and Cybernetics; IEEE Transactions on Professional Communication; Small Group Research; Expert Systems with Applications;* and others. He serves as an associate editor at *AIS Transactions on HCI* and at *Communications of the AIS.*

**Peter Rohner** is managing the Competence Center Health Network Engineering which is concerned with e-government and e-health issues, at the Institute of Information Management at the University of St. Gallen (http://ehealth.iwi.unisg.ch). He earned a master’s degree in information systems and a doctorate degree with a work on architecture and integration of distributed systems. He is currently working on his postdoctoral lecture qualification in the areas of e-government and e-health. He is a member of several Swiss national expert panels in these two interconnected fields and managing partner of BEG & Partners, a consultancy specialized in management of hospitals and public administrations (http://www.begpartners.com).

**Ren Congying** is an undergraduate student of Shenzhen Tourism College of Jinan University. In view of the significance and the developmental trend of eCommerce in future, she selected eCommerce as her main research fields. She has participated in some research and development projects such as the
Intangible Cultural Heritage research activity, ‘Nan Feng Chuang’ research activity and scientific and technological innovation projects.

**Shailaja Venkatsubramanyan** is an Assistant Professor in the Information Systems (IS) department in the College of Business at San Jose State University. She has a Ph.D. in Information Systems from the University of Arizona. She has worked at Price Waterhouse (Mumbai, India), Tulane University (New Orleans, Lousiana), and Kanisa (a Knowledge Management startup in the Silicon Valley). Her research projects are related to information retrieval, search engine valuation, web log analysis and impact of online information on impression formation.

**Sudha Ram** is McClelland Professor of Management Information Systems in the Eller College of Management at the University of Arizona. She received a Bachelors degree in Chemistry (with Physics and Mathematics), an MBA from the Indian Institute of Management, Calcutta, and a Ph.D. from the University of Illinois at Urbana-Champaign. Dr. Ram works in the area of enterprise data management.

**Tang Loon Ching** is an Associate Professor and Head of the Department of Industrial and Systems Engineering in the National University of Singapore. He obtained a PhD degree in 1992 from Cornell University in the field of Operations Research. He is on the editorial review board of the Journal of Quality Technology and has been an active reviewer for a number of international journals. He has been consulted on problems demanding innovative applications of probability, statistics and other operations research techniques; and is also a well-known trainer in Six Sigma.

**Tobias Mettler** is employed as researcher at the Competence Center Health Network Engineering, Institute of Information Management at the University of St. Gallen (http://ehealth.iwi.unisg.ch) after working several years in the consulting business. He holds a master’s degree in information systems of the University of St. Gallen and is currently working on his PhD in the field of organizational change engineering of health service providers.

**William E. Spangler** is an associate professor of Information Systems Management in the Palumbo-Donahue School of Business at Duquesne University. His current research interests focus on computational modeling for decision support in complex systems, as well as machine learning and data mining. His work has been published in *Management Science, Communications of the ACM, Journal of Management Information Systems, Decision Support Systems, Information and Management, Interfaces, and IEEE Transactions on Knowledge and Data Engineering*. Spangler is a member of the Association for Computing Machinery (ACM), the Association for Information Systems (AIS) and the Information Systems Audit and Control Association (ISACA).

**William K. Cheung** received the BSc and MPhil degrees in electronic engineering from the Chinese University of Hong Kong and the PhD degree in computer science in 1999 from the Hong Kong University of Science and Technology. He is an associate professor in the Department of Computer Science, Hong Kong Baptist University. He has served as the co-chair and a program committee member of a number of international conferences, as well as a guest editor of journals in areas including artificial intelligence, Web intelligence, data mining, Web services, and e-commerce technologies. Also, he has been on the editorial board of the *IEEE Intelligent Informatics Bulletin* since 2002. His research interests include...
artificial intelligence and machine learning, as well as their applications to collaborative filtering, Web mining, distributed data mining, planning under uncertainty, and Web services management.

Wu Chengjuan is a undergraduate student of the Shenzhen Tourism College of Jinan University, and her major is ecommerce. Recently she has participated in some research and development projects such as the development of recommender systems in eCommerce and scientific and technological innovation projects and she also interested in analyzing the problems and the future development about logistics industry in China.

Xiaofeng Zhang received the BSc degree from Northeast Dianli University, the MPhil degree from Harbin Institute of Technology, China and the PhD degree from Hong Kong Baptist University. His research interests are data mining and machine learning.

Xinqing Yan is now an associate professor at the School of Information Engineering, North China University of Water Conservancy and Electric Power, China. He received his BSc in computer science from Peking University, PhD in Mechanical Engineering from Wuhan University of Technology. His primary research interests are RFID and application, Sensor networks and etc.

Xuemei Su is an assistant professor at the department of Management and HRM, California State University Long Beach. She received her MA. in Business Administration from Dongbei University of Finance and Economics, China and PhD in Management Science from the University of Wisconsin, Milwaukee. Her primary research interests are in logistics system efficiency, supply chain management and information sharing.

Yang Li is a principal scientist from British Telecom (BT). He has successfully applied intelligent technologies to the areas of service engineering and management in BT. Yang received BSc in computer software (1994), MSc in artificial intelligence (1997) and PhD in computer science (2001). He has 17 granted and filed patents and 45 refereed books, book chapters, journal articles and conference papers, winning accolades such as “top accessed article in IJSEKE” and “BT Gordon Radley papers premium”. Yang is the founding chair of IEEE international workshop series on “Barriers towards Internet-Driven Information Services” and a frequent industrial supervisor for MSc, PhD students and graduates from top UK universities. He also serves as an editorial member for a number of international journals, conferences and workshops.

Ye Xiang is an undergraduate student of the Shenzhen Tourism College of Jinan University. He has participated in some R & D projects such as “Nan Feng Chuang” research activity, Challenge Cup in Jinan University and Scientific and technological innovation projects. He also interested in analyses of the present situation and the problems about logistics enterprise in China. And the eComerce is his main research fields.

Ying Liu is an assistant professor at the department of Information Systems, California State University Long Beach. He received his Bachelors degree in EE from XiAn JiaoTong University, China and MSc in computer science from University of Southern California and PhD in Management Science from University of Arizona. His primary research interests are in software architecture and business intel-
ligence. Tao Lin is the Director of Research and Development of Amitive, a Community Supply Chain Company. From 2002 to 2008, he worked for SAP where he led RFID related research. He received a Master of Engineering in Computer Science from University of Science and Technology, Beijing and PhD in Computer Science from University of Newcastle, Australia. His current primary research interests are in complex event processing, business intelligence and enterprise applications.

Younès Bennani received his BSc in Mathematics and Computer Science from Rouen University, his MSc and PhD degrees in Computer Science from the University of Paris11 (ORSAY) in 1992 and the HDR (Habilitation à Diriger des Recherches) degrees in Computer Science from the University of Paris 13 in 1998. He joined the Computer Science Laboratory of Paris-Nord (LIPN-CNRS) in 1993. He is currently a full professor in Computer Science with research interest in theory of neural networks, statistical pattern recognition and datamining. He has published two books and approximately 150 papers in refereed conference proceedings or journals or as contributions in books. Professor Younès Bennani is the head of the machine learning research team at the LIPN-CNRS. He gives the MS lecture on neural networks and statistical pattern recognition at the Paris 13 University.

Yuan Xue-Ming is a Research Scientist of Singapore Institute of Manufacturing Technology (SIM-Tech) and Adjunct Associate Professor of the Department of Industrial and Systems Engineering, National University of Singapore. He has held various academic positions in China, France, Hong Kong and Singapore. He has published a number of scientific papers in the leading academic journals which include IEEE Transactions, IIE Transactions, Operations Research, European Journal of Operations Research, Journal of Applied Probability, etc. He has been leading many research and industry projects in the areas of Demand Forecasting, Inventory Network Optimisation, Global Supply Chain Optimisation and Management, Stochastic Models and Algorithms, and E-Commerce Fulfillment. His academic and industrial contributions and achievements have been included in Marquis Who’s Who in the World, Marquis Who’s Who in Science and Engineering.

Yupo Chan is Professor & Founding Chair of the Systems Engineering Department at the University of Arkansas at Little Rock. He received his BS degree in civil engineering, MS degree in transportation systems/economics and Ph.D. degree in operations research, all from MIT. Dr. Chan has written numerous journal articles and books. His research interests include telecommunication systems, transportation systems, networks and combinatorial optimization, multicriteria decision-making, spatial-temporal information, econometrics and technology assessment. He has previously held faculty positions at the Air Force Institute of Technology, Washington State University, Stony Brook University, and Pennsylvania State University. Dr. Chan is a Fellow of the American Society of Civil Engineers and has won numerous awards for his work, including the Harland Bartholomew Award of the American Society of Civil Engineers, the Koopman Prize of the Operations Research Society of America and a Congressional Fellowship with the Office of Technology Assessment.

Zhang Mu is a professor and Chief of the GIS & Tourism Laboratory at the Shenzhen Tourism College of Jinan University, China. He earned his Bachelor and Master degree both major in Geography and later received a diploma and a Ph. D degree in Geography from Fujian Normal University of China, mainly focus on the GIS application in resources development and environment protection. In his postdoctoral research, he also engaged in GIS technology applications and the projects researches have involved
agriculture, land use and tourism planning. Since 1985, he has been working as a teacher in college and university for more than 23 years and involved in several national and local government R&D projects. His research interests include geography, e-commerce in tourism, tourist resources development & planning, and the GIS application in tourism. He has more than 70 publications to his credit in Chinese and international journals or conferences in these areas.

**Zhouping Yin** is now a professor at the State Key Laboratory of Digital Manufacturing Equipment and Technology, Huazhong University of Science and Technology, China. He receives his BSc and PhD in Mechanical Engineering from Huazhong University of Science and Technology. His primary research interests are digital manufacturing, electric manufacturing and equipment, RFID and etc.
