About the Contributors

**John Wang** is a Full Professor at MSU. Having received a scholarship award, he came to the USA and completed his PhD in Operations Research from Temple University. He has published more than 100 refereed papers and six books. He is the Editor-in-Chief of *Int. J. of Applied Management Science*, *Int. J. of Information Systems and Supply Chain Management*, and *Int. J. of Information Systems in the Service Sector*. Also, he is the Editor of *Encyclopedia of Data Warehousing and Mining* (4 volumes)-2e, *Data Warehousing and Mining: Concepts, Methodologies, Tools, and Applications* (6 volumes). His long-term research goal is on the synergy of operations research, data mining and cybernetics.

***

**Stuart J. Allen** is Professor Emeritus, Penn State Erie - The Behrend College. His interest involves the application of mathematical models to practical problems experienced by industry. Professor Allen received a PhD from the University of Minnesota in engineering mechanics and worked in the aerospace industry during the early part of his career. Besides his academic career, Professor Allen has also owned and operated three businesses in Wisconsin and New York.

**Majed Sultan Al-Otaibi** has received his M.S. in Industrial Engineering from University of Arizona. He can be reached by email at alotaibi@email.arizona.edu.

**Dr. Jeff Ban** is an Assistant Professor of Civil and Environmental Engineering Department at Rensselaer Polytechnic Institute (RPI). He received his PhD from the University of Wisconsin at Madison in 2005. Dr. Ban’s research interests are in the areas of transportation modeling and traffic simulation, traffic control and operations, network modeling, and Intelligent Transportation Systems (ITS). His recent research activities include modeling mobile sensors (like GPS cellular phones) as traffic probes, applications of microscopic traffic simulation to corridor-based transportation management, and robust congestion pricing. He presented his research at national and international conferences, including Transportation Research Board Annual Meetings, International Conference on Complementarity Problems (ICCP), and INFORMS. His articles appeared in *Transportation Research Part B, Mathematical and Computer Modeling, Networks and Spatial Economics, International Journal of Operations Research and Information Systems*, and *Transportation Research Record*.

**Dr. Asish Bandyopadhyay** is a Professor of the Department of Mechanical Engineering, Jadavpur University, Kolkata, India. He has been serving at the university for the last 23 years. He completed his undergraduate and postgraduate studies in Mechanical Engineering and was awarded PhD (Engg) degree from Jadavpur
University. Before joining Jadavpur University, he served in heavy industries in India for approximately six years. His fields of interest include manufacturing and machining technology and heat transfer.

Dustin J. Banet is an outstanding student at the Industrial Engineering program, University of Louisville.

John Canby is a field engineer for Schlumberger, working with the Reservoir Evaluation Wireline segment in Indonesia. He received his M.S. in Industrial Engineering from University of Arizona. He can be reached by email at jcanby@duri.oilfield.slb.com.

Nurcin Celik is a Ph.D. candidate in the Department of Systems and Industrial Engineering at The University of Arizona (UofA). She received her B.Sc. in Industrial Engineering from Bogazici University, Turkey and M.S. in Systems and Industrial Engineering at UofA. Her research focuses on architectural design and application of dynamic data-driven adaptive simulations for distributed enterprises. She has received several awards such as the IIE Outstanding Graduate Research Award (2009) and the Best Ph.D. scientific poster award in the Ph.D. Colloquium at IERC2009. She serves as the treasurer of INFORMS Student Chapter at UofA and a student member of IIE, INFORMS and SME. She can be reached at nurcinkoyuncu@gmail.com.

Ching-Ter Chang received M.S. and Ph.D. degrees from the department of Information Management, National Chiao Tung University, Taiwan, R.O.C. in 1992 and 1997. He is currently a Full Professor of Chang Gung University, Tao-Yuan, Taiwan, R.O.C. His research interests include decision-making, supply chain management, mathematical programming, and digital applications. His publications appear in several journals including IEEE/ACM Tran Networking, IEEE Tran FS, EJOR, Omega, JORS, IJPE, COR, TR-E, AMM, IJSS and so on.

Lijian Chen is an Assistant Professor of Industrial Engineering at University of Louisville, Louisville, KY, USA. He obtained his Ph.D. degree in Operations Research from Ohio State University in 2006. He has research papers accepted by Annals of Operations Research, European Journal of Operational Research, and Int. J. Revenue Management. He has organized a sequence of technical sessions on topics of revenue management, logistics, and computers in OR at the Institute for Operations Research and Management Science (INFORMS) annual meetings.

Yvonne Yi Chen is a senior engineer of industrial management at VisEra Technologies Company, which provides image sensor, turn-key service in back-end color filter fabrication, and optical solutions. She obtained her Master and Bachelor degrees both in Industrial Engineering and Engineering Management from National Tsing Hua University, Taiwan. Her research interests include pricing strategy and substitution effect of perishable products. After receiving the diploma, she started to work at semi-conductor industry and received the copper award from National Continuous Improvement Team Competition (2008). Currently her works focus on capital expenditure management, capacity strategy and cost structure modeling for new product development.

Martha C. Cooper is a Professor of Marketing and Logistics, Fisher College of Business, The Ohio State University. She has worked in brand management and in sales. Her research interests include
supply chain management, partnership and other inter-firm relationships, the role of customer service in corporate strategy, international logistics, and strategic planning for logistics. She has co-authored three books and has over one hundred publications. She holds a BS in Math/Computer Science and a MS in Industrial Administration from Purdue University. Her Ph.D. is from The Ohio State University.

**Dr. Saurav Datta** is an Assistant Professor in the Department of Mechanical Engineering, National Institute of Technology Rourkela India. He obtained his BME (Hons), and PhD degrees in Mechanical Engineering from Jadavpur University. He has more than 6 years of experience in teaching and research. His current area of research includes Welding Technology, Manufacturing Processes, Multi-Criteria Decision-Making, Quality Engineering, optimization & Simulation modeling.

**Dimitrios M. Emiris** is an Associate Professor at the Department of Industrial Management and Technology, University of Piraeus, Greece. He obtained the Diploma in Electrical Engineering from the National Technical University of Athens, in 1987. He obtained the M.Sc. and the Ph.D., in 1988 and 1991, respectively, from the Department of Electrical Engineering, University of Rochester. From 1997 to 2001 he served as an Assistant Professor of the Production Systems Division at the Department of Production Engineering and Management, of the Technical University of Crete. He has published over 100 articles in international journals and conferences and is the author of three books. His research interests lie in the areas of computational intelligence, logistics, project and production management.

**Dr. Michael C. Ferris** is Professor of Computer Sciences and Industrial and Systems Engineering at the University of Wisconsin, Madison, USA. He received his PhD from the University of Cambridge, England in 1989. Dr. Ferris' research is concerned with algorithmic and interface development for large scale problems in mathematical programming, including links to the GAMS and AMPL modeling languages, and general purpose software such as PATH, NLPEC and FATCOP. He has worked on several applications of both optimization and complementarity, including cancer treatment plan development, radiation therapy, video-on-demand data delivery, economic and traffic equilibria, structural and mechanical engineering. Ferris received the Beale-Orchard-Hays prize from the Mathematical Programming Society and is a past recipient of a NSF Presidential Young Investigator Award, and a Guggenheim Fellowship. He serves as co-editor of Mathematical Programming, and is on the editorial boards of SIAM Journal on Optimization, Transactions of Mathematical Software, and Optimization Methods and Software.

**William P. Fox (*)** is a professor in the Department of Defense Analysis at The Naval Postgraduate School in Monterey, California. He obtained his PhD degree in Industrial Engineering and Operations Research at Clemson University and his MS degree in Operations Research at the Naval Postgraduate School. His current research interests include mathematical modeling, optimization, game theory, and simulation. He has presented his work at many conferences including: INFORMS, Mathematical Association of America Joint Annual Conference, Military Application Society (MAS), and International Conference of Technology in Collegiate Mathematics (ICTCM). He has coauthored several books and has over one hundred published articles. He has taught at the United States Military Academy, Francis Marion University, and the Naval Postgraduate School.
Mark Frost has enjoyed an eclectic career that spans 20 plus years of applying quantitative methods and scientific rigor onto various financial sector fields. In addition to and in concert with his Fiserv responsibilities, Mark is an adjunct Professor of Economics at Southern Methodist University. He has published several items of original research in scholarly academic journals and has presented over three-dozen papers at peer-reviewed academic conferences, as well as dozens more business-grade professional presentations of thought leadership. He has made guest appearances on numerous radio and television programs where he is known as a lively and engaging speaker on issues of political economy, money & banking, globalization, and the epistemology and philosophy of prediction in uncertainty. Mark possesses Bachelor’s degrees in Business Administration (BBA) and Mathematics (BS); Master’s degrees in Applied Econometrics (MSAE), Political Science (MPA), Geographic Information Systems (MGIS); and a doctorate in Monetary Economics (Ph.D.).

Libardo S. Gómez-Vizcaíno is a researcher at the Caribbean Research Center for Enterprise Modeling (FCIMEC). He holds a Master of Science and the Engineering degree both from Universidad del Norte, Barranquilla, Colombia. His research interests include computational intelligence applied to complex optimization problems.

Mohammed Hajeeh (Dr.) is currently a Research Scientist and the Director of the Techno-Economics Division (TED) at Kuwait Institute for Scientific Research (KISR). Dr. Hajeeh has his Ph.D. in Operations Research from University of Kent at Canterbury, U.K. He is a lead author of several research reports and scientific papers on various topics in different international refereed journals. His research interests are: production and planning; reliability and risk assessment; statistical experimental design; mathematical modeling; and decision support systems.

Shih-Ping Han is a professor in the Department of Applied Mathematics and Statistics, Johns Hopkins University. He obtained his PhD degree from the Department of Computer Sciences, University of Wisconsin at Madison. He had also been a distinguished professor of mathematics in the University of Illinois at Urbana-Champaign, an assistant professor of computer sciences in Cornell University, and a visiting scholar in Cambridge University. Professor Han is a renowned mathematician in the area of continuous optimization and had published many important results in the journals like Mathematical Programming and Mathematics of Operations Research.

Theodore Heiman enlisted in the Air Force in 1988 as an Avionics Sensors Maintenance Specialist. During his 21 years of military service as an aircraft maintenance specialist, his duty stations have included Davis-Monthan AFB, AZ, Osan AB, South Korea, Sheppard AFB, TX, Wright-Patterson AFB, OH, and Hill AFB, UT. He earned a Masters degree in Aeronautical Science with an emphasis on aerospace safety and education from Embry-Riddle Aeronautical University in 2007 and a second Masters in Logistics Management with an emphasis on operational maintenance from the Air Force Institute of Technology in 2009.

Raymond R. Hill Jr. is a Professor of Operations Research with the Department of Operational Sciences, Air Force Institute of Technology (AFIT). He received his Ph.D. from The Ohio State University in 1996, an M.S. in Operations Research from AFIT in 1988, and a B.S. in Mathematics from Eastern
About the Contributors

Hui-Ping Ho is a Ph.D student of Information Management at National Chung Cheng University and a lecturer of International Business Administration at Chienkuo Technology University in Taiwan. She obtained her master’s degree in Business Education from National Changhua University of Education. Her research interests include decision making, operation research, supply chain management, supplier selection, and housing evaluation. She presented her research at several conferences, including The 11th National Conference of Information Management for PHD, and Conference of International Business Management. Her articles appeared in the Quality and Quantity, and Journal of Information Management. She taught courses at Chienkuo Technology University.

Alan W. Johnson is an Associate Professor of Logistics and Supply Chain Management with the Department of Operational Sciences, Air Force Institute of Technology (AFIT). He received his Ph.D. from the Virginia Polytechnic Institute and State University in 1996, an M.S. in Systems Engineering Management from AFIT in 1989, and a B.S. in Mechanical Engineering from Montana State University in 1982. His research interests are in the areas of discrete event simulation modeling, design of experiments, and heuristic search methods applied to applications in space logistics and air transportation systems.

Pinaki Kar is a senior analyst with an investment firm in the New York City area. He received the B. Tech. degree from IIT - Kanpur, a Master of Engineering from MIT, and an MBA from New York University. Pinaki has held several corporate management positions in the pharmaceutical industry. His current interest involves several aspects of investing in the healthcare industry.

Omid Kazemi is a Ph.D. candidate in the department of Aerospace and Mechanical Engineering at the University of Arizona. He received his M.S. degree from Sharif University of Technology and his B.S. in mechanical engineering from University of Tehran. He can be reached by email at kazemi@email.arizona.edu.

Jeff Kennington (*) received a BSIE from the University of Arkansas in 1968, a MSIE in 1970, and a Ph.D. in 1973 from the Georgia Institute of Technology. He joined Southern Methodist University in 1973 and served as Department Chair for 17 years. He is an associate editor for Networks and the INFORMS Journal on Computing and is on the editorial boards of Telecommunication Systems and Computational Optimization & Applications. He was selected as the 2003 University Scholar/Teacher of the Year. He was selected as an SMU Altshuler Distinguished Teaching Professor in 2004 and was granted membership in the SMU Academy of Distinguished Teachers. He was selected as an INFORMS Fellow in 2005. In 2008 he received a SMU Distinguished University Citizen Award. He is the co-author of one book and over 60 journal publications. He has been Principal Investigator on 32 research grants totaling over 3.5 million.
Nan Kong is an assistant professor in the Weldon School of Biomedical Engineering at Purdue University. He joined Purdue in fall 2007, prior to which, he was an assistant professor in the Department of Industrial and Management Systems Engineering at the University of South Florida from 2005 to 2007. He received his PhD in Industrial Engineering from the University of Pittsburgh. His research interests include stochastic discrete optimization.

Cheng-Yuan Ku was born in Taipei, Taiwan, R.O.C. He received the B.S. degree in control engineering from National Chiao Tung University, Taiwan in 1987 and the M.S. and Ph.D. degrees in electrical engineering & computer science from Northwestern University in 1993 and 1995, respectively. From 1995 to 1999, he was with Department of Information Engineering, I-Shou University. Since 1999, he joined the Department of Information Management, National Chung Cheng University, Taiwan, R.O.C. Now he is a professor and serves as chair in this department. His current research interests include Optimization, Stochastic Process, Network Management, Information Security Management, and Supply Chain Management.

Hyoung-Gon Lee (*) is a postdoctoral associate at the MIT Laboratory for Manufacturing and Productivity, co-sponsored by uCIC (u-Computing Innovation Center), Seoul National University, Korea. Dr. Lee holds a bachelor’s and a PhD degree from Seoul National University in industrial engineering, specializing in bringing computational advances to manufacturing systems, such as MRP and APS. At MIT, he is currently working on the next generation applications of M Language, an outcome of Auto-ID Technology. Hyoung-Gon holds several software licenses through MIT.

Anhua Lin is an assistant professor in the Department of Mathematical Sciences, Middle Tennessee State University. He obtained his PhD degree from the Department of Applied Mathematics and Statistics, Johns Hopkins University. Professor Lin’s research interests include continuous optimization and integer programming. His recent focus is on Graph Theory and Combinatorics. Professor Lin has published several papers in the journals like SIAM Journal on Optimization and Discrete Applied Mathematics. He also presented his research in INFORMS, SIAM, and so forth.

Dr. Henry Liu is currently an Assistant Professor of Civil Engineering at the University of Minnesota, Twin Cities. His research interests are in the areas of traffic control and operations, traffic flow theory, and transportation network modeling. His recent research activities include arterial traffic data collection and signal optimization, real-time traffic management for emergency evacuation, analytical dynamic traffic assignment, and application of microscopic traffic simulation models. He has published more than 30 refereed journal articles in these areas. Dr. Liu is a member of Transportation Network Modeling Committee of Transportation Research Board (TRB) and a member of Traffic Signal Operations Committee of Institute of Transportation Engineers (ITE). In 2008, Dr. Liu received the New Faculty Member Award presented by the Council of University of Transportation Research Centers (CUTC) and American Road and Transportation Builders association (ARTBA).

Anusha Madhavan received a PhD in Operation Research from Southern Methodist University in 2009, and a Masters in Computer Information Systems from Florida Institute of Technology in 2002. She is currently working as operation research and analysis specialist for MinMax Technologies, a startup.
company in Dallas. She received the outstanding graduate student award in 2004, the outstanding teaching assistant award, and a graduate research day award in 2007. She has presented her research work in at several INFORMS annual conferences, and INFORMS telecommunication conferences. Her research has been focused on designing and implementing mathematical models for multi-commodity network routing applications in telecommunications and cash logistics fields.

**Charis Marentakis** is a PhD candidate in the Department of Industrial Management & Technology of University of Piraeus, Greece. He obtained a Diploma in Production Management Engineering from Technical University of Crete in 1996 and in 1997 received a Best Diploma Thesis Award from Technical Chamber of Greece. Since 1997 he worked as a senior Logistics and ERP consultant for many consulting companies. He is currently working for an express logistics company holding the position of long-haul transportation and sorting network manager. He is an ERP systems instructor in the area of Production Planning in the Logistics Management MSc program at the University of Piraeus. He also teaches the Advanced Technologies for Logistics in the Technological Education Institute of Chalkida. He has published many articles in the area of Logistics Management. His current research interests include auction theory, e-commerce, Location-based services, Logistics management and ERP systems.

**Esfandyar M. Mazhari** is a Ph.D. candidate in the Department of Systems and Industrial Engineering at University of Arizona. He received his B.S. in Industrial Engineering from Tehran Poly Technique University in Iran in 1999 and M.S. in Socio- Economical Systems Engineering from Iran University of Science and Technologies in 2002 and M.S. in Systems and Industrial Engineering from University of Arizona in 2008. His research interest includes distributed simulation and heuristic optimization. He is a student member of IIE, INFORMS and PMI. He can be reached by email at emazhari@email.arizona.edu.

**Jairo R. Montoya-Torres** is Associate Professor of Operations Research and director of the Master program in Operations Management at Universidad de La Sabana, Colombia. He holds a Ph.D. degree from Ecole Nationale Superieure des Mines de Saint-Etienne, France. His research interests include scheduling, applied combinatorial optimization, reverse/sustainable logistics and collaborative supply chain management. He has been Guest-Editor for the International Journal of Information Systems and Supply Chain Management, Annals of Operations Research and the Journal of Intelligent Manufacturing. Dr. Montoya is currently Associate Editor of the Journal of Modelling and Simulation of Systems, Journal of Studies on Manufacturing, Journal of Artificial Intelligence: Theory and Application.

**Dr. Goutam Nandi** is a Reader of the Department of Mechanical Engineering, Jadavpur University, Kolkata, India. After obtaining MME degree from Jadavpur University, he obtained a Senior Research Fellowship from the Department of Mechanical Engineering (JU). He was awarded a PhD degree from Jadavpur University in 2009. He has been involved with teaching and research since 1982. His teaching and research areas are mainly in materials science (structure, property and performance) associated with different welding conditions.

**Jason Papathanasiou** is a full time lecturer at the department of Marketing and Operations Management, University of Macedonia, Greece. He holds a Ph.D. in Operational Research and Informatics and a degree in Physics, both from the Aristotle University of Thessaloniki, Greece. He has worked for a
number of years as an external lecturer at the Technical Institute of Technology in Thessaloniki and on
the Universities of Macedonia and Western Macedonia teaching courses like ‘Computer Applications
participated in a number of national and EU funded (under the FP6 and FP7 schemes) projects and has
published his work in international scientific peer referred journals.

Carlos. D. Paternina-Arboleda is Associate Professor and former Head of the Department of Industrial
Engineering at Universidad del Norte, Barranquilla, Colombia. He also acted as Academic Director of
the Center for Latin-American Logistics Innovation (CLI – MIT Alliance), in Bogotá, D.C., Colombia.
He received his Ph.D. in Industrial Engineering from the University of South Florida, USA. His research
interests are in simulation of production and logistics systems, supply chain management and scheduling.

Carey E. Priebe is a professor in the Department of Applied Mathematics and Statistics, the Johns
Hopkins University. He obtained his Ph.D. degree in Information Technology and Computational Statistics
from the George Mason University. Professor Priebe is a renowned statistician and currently is a Fellow
of the American Statistical Association. He also holds joint appointments as a professor in the Department
of Computer Sciences and as a senior research scientist in the Center for Imaging Science, both at the
Johns Hopkins University. Professor Priebe is also a research professor in the National Security Institute
at the Naval Postgraduate School, and has been named one of six inaugural National Security Science and
Engineering Faculty Fellows. Professor Priebe’s research spans a broad spectrum of probability, statistics,
and operations research, and has more than 100 journal publications and dozens of patents in those areas.

Parag Sarfare is a software systems engineer working at NetApp Inc. with the file systems group.
He received his M.S degree in Computer Science at the University of Arizona. His research interests
include Operating Systems, Storage Systems and Distributed Computing. He can be reached by email
at parags@cs.arizona.edu.

Edmund W. Schuster is a research engineer at the MIT Laboratory for Manufacturing and Productiv-
ity. He is co-author of Global RFID: The Value of the EPCglobal Network for Supply Chain Management
(Springer 2007), a popular book about RFID (radio-frequency identification). Ed has published over 100
articles on the application of Management Science. Before MIT, he worked as Corporate Manager of
Operations Planning at Welch Foods, and has been an active member in professional societies including
APICS (American Production and Inventory Control Society).

Elyn L. Solano-Charris is full time professor within the School of Economics and Management
Sciences at Universidad de La Sabana, Colombia. She holds a Master of Science and the Engineering
degree in Industrial Engineering both from Universidad del Norte, Barranquilla, Colombia. Her works
have been presented at various academic conferences and published in various international journals.
Her research interests include optimization of logistics and production systems and information systems
for supply chain management.

Young-Jun Son (*) is an Associate Professor of Systems and Industrial Engineering at The Univer-
sity of Arizona. He is an associate editor of the International Journal of Modeling and Simulation and
About the Contributors

the International Journal of Simulation and Process Modeling. He has received several awards such as the SME 2004 Outstanding Young Manufacturing Engineer, the IIE 2005 Outstanding Young Industrial Engineer, and the Best Paper of the Year Awards in 2007 from International Journal of Industrial Engineering. He has authored or co-authored over 80 publications in refereed journals and conferences, primarily on developing the new field of Distributed Federation of Multi-paradigm Simulations. He can be reached by email at son@sie.arizona.edu.

Lizhi Wang is an assistant professor in Industrial and Manufacturing Systems Engineering at Iowa State University, and he also holds a courtesy joint appointment with Electrical and Computer Engineering. He joined Iowa State in fall 2007, prior to which, he received his PhD in Industrial Engineering from the University of Pittsburgh and two Bachelor’s degrees in Automation and Management Science both from the University of Science and Technology of China. His research interests include optimization and deregulated electricity markets.

Ue-Pyng Wen (*) is a Professor of Industrial Engineering and Engineering Management at National Tsing Hua University, Hsinchu, Taiwan, R.O.C. He received his PhD in Industrial Engineering from the State University of New York at Buffalo, U.S.A. His primary research interests are in the area of multi-criteria decision making, production management, telecommunications network planning, and applied operations research. He has published over 40 technical papers in journals such as IIE Transactions, J. of the Operational Research Society, European J. of Operational Research, Computers and Operations Research, and Interfaces.

Xugang Ye (*) is a research associate in the Department of Applied Mathematics and Statistics, Johns Hopkins University. He obtained his PhD degree from the Department of Applied Mathematics and Statistics, Johns Hopkins University. Dr. Ye has broad research interests in Probability, Statistics, and Optimization and is serving on collaborative research projects from the Department of Electrical Engineering, Duke University, and the Biostatistics Branch, National Institute of Child Health and Human Development. He also presented his research in INFROMS, SIAM, and so forth, and was selected as the Counselman Fellow in Johns Hopkins University.

Ruiliang Yan is an Assistant Professor of Marketing at Indiana University Northwest, USA. He received his PhD in Marketing from the University of Wisconsin, Milwaukee. He has published a book and a number of articles in different refereed journals. He also serves as a Referee for many highly prestigious journals. He specializes in marketing modeling, retailing, and supply chain management.

Ying Zhou is a Ph.D. student in the Industrial and Manufacturing Systems Engineering at Iowa State University. She obtained her Bachelor’s degree in Applied Mathematics from Ludong University, China. She received her Master’s degree in Computational Mathematics from Xi’an Jiaotong University, China. Her research interests include optimization and electricity expansion planning models.
