About the Authors

Pär J. Ågerfalk, PhD, is a postdoctoral research fellow at the University of Limerick, Ireland, and an assistant professor (universitetslektor) in informatics at Örebro University, Sweden. His current research centres on open source software development in the secondary software sector, globally-distributed and flexible software development methods, and how information systems development approaches can be informed by language/action theory. His over 40 peer-reviewed publications have appeared in a variety of international journals, books, and conference proceedings, and he is an associate editor of the European Journal of Information Systems and Systems, Signs & Actions. He is currently a guest editor of Communications of the ACM and Software Process: Improvement and Practice.

Ian F. Alexander is an independent consultant specialising in requirements engineering. He is also an experienced instructor and has written training courses for a range of organizations. He is the author of the Scenario Plus! toolkits. His principal research interest is in improving the requirements’ engineering process through scenarios and other people-centred techniques. He is currently exploring the use of scenarios on a technology project to investigate the reuse of specifications for control systems in the German automobile industry. His book, Writing Better Requirements, was published by Addison-Wesley in 2002, and another book, Scenarios, Stories, Use Cases, was published by John Wiley in 2004. He has published numerous technical papers and is on the Program Committee of the Requirements Engineering 2004 Conference. He helps to run the BCS Requirements Engineering Specialist Group and the IEE Professional Network for Systems Engineering. He is a chartered engineer.

Laurence Brooks is a lecturer in the School of Information Systems, Computing and Mathematics at Brunel University, UK. Previously, he was a lecturer in the Depart-
About the Authors

Laurence J. Brooks is professor of Computer Science, University of York, and held a research position in the Judge Institute of Management Studies, University of Cambridge. Dr. Brooks has a PhD in industrial management (University of Liverpool) and a BSc in Psychology (University of Bristol). His research interests include: techniques for better knowledge elicitation in the early systems development and for bringing together the business and technological areas of an organization; the role that social theory might play in contributing to our understanding of information systems in areas such as health information systems and collaborative work support systems. He is a member of the national boards of the UK Academy for Information Systems (UKAIS) and the UK Systems Society (UKSS). He has published in journals such as the Information Systems Journal, The Information Society and the European Journal of Information Systems. He can be reached at laurence.brooks@brunel.ac.uk.

Josep Casanovas is a professor at the Technical University of Catalonia in Barcelona, in the Statistics and Operational Department. During his career, he has combined teaching, research, and several management education roles. He has published several articles in top academic journals and conferences in the areas of simulation, operational research, and information technology. He can be reached at josepk@fib.upc.edu.

Charlie C. Chen is an assistant professor in the Department of Computer Information Systems at Appalachian State University, USA. His research areas are e-learning effectiveness, mobile commerce, and knowledge management. Prior to this position, he taught at California State University, Northridge. He has authored more than 12 referred articles and proceedings, and presented at many professional conferences and venues. He has published in the Communications of AIS, Knowledge Management Research and Practice, and the Journal of Information Systems Education. He has authored a chapter on global information systems in the Encyclopedia of Information Systems and a chapter on traditional versus Internet EDI in the Encyclopedia of E-Commerce, E-Government, and Mobile Commerce. Dr. Chen received his PhD from the Claremont Graduate University and an MBA from the American Graduate School of International Management (Thunderbird).

Christian Clausen is an associate professor with a MSc (Eng.) with specialisation in production management. Previously, he was a consultant and contract researcher at the Danish Technological Institute, Department for Industrial Psychology from 1978 to 1986, an associate professor at the Technical University of Denmark (DTU), Unit of Technology Assessment from 1987 to 1994, and Department of Technology and Social Sciences from 1995 to 2000. Since 2001, he has been an associate professor at the Department of Manufacturing Engineering and Management, as head of the Section of Innovation and Sustainability. His current research interests include computer science, business, and technology.
and teaching include social shaping of technology, technology management, and sociotechnical dimensions of design and innovation.

**Christopher Davis** is an assistant professor of information systems at the University of South Florida, St. Petersburg, USA. He has held faculty positions at a number of universities in the UK. His current research explores the impact of information systems on knowledge workers, in particular the training challenges presented by increasingly sophisticated and specialist information systems. He has carried out research in the healthcare, financial services, criminal justice, and defence sectors. He is a member of the British Computer Society, the Association for Information Systems, the ACM and was recently elected to senior membership of the Institute of Electrical and Electronics Engineers (IEEE). He can be contacted at davisc@stpt.usf.edu.

**José Esteves** has been a professor and chair of the information systems area at the Instituto de Empresa, Madrid, Spain, since 2004. He is also the chair of the Software AG-Alianza Sumaq Research Center in E-Government. He received his PhD in information systems from the Universidad Politécnica de Catalunya (UPC), Barcelona, a master’s and engineering degrees in information systems from the Universidade do Minho (UM), Portugal, and a diploma in business administration from the Instituto Superior de Tecnologia Empresarial, Porto, Portugal. He is the author of many articles about ERP systems published in international conferences, books, and journals. His research interests focus on the implementation and use of enterprise systems, ERP, impact of information systems on organizations, user satisfaction, benefits of information systems, e-government, knowledge management, and its use at organizational level. He can be reached at jose.esteves@ie.edu.

**Susan E. George** received her BSc and PhD in computer science from the University of Reading, UK, and MSc in knowledge-based systems from Edinburgh University, UK. Dr. George has undertaken post-doctoral research at both the Department of Optometry and Vision Sciences, University of Wales, and the School of Computer and Information Science, University of South Australia. Her research interests lie within the field of artificial intelligence, especially the theology of intelligent technology, artificial neural networks and pattern recognition, with applications in a variety of fields.

**Göran Goldkuhl**, PhD, is a professor of information systems at Linköping University and Jönköping International Business School, Sweden. He is the director of the Swedish research network VITS, consisting of 40 researchers at six Swedish universities. He has published several books and more than 80 research papers at
conference, in journals, and as book chapters. He is currently developing a family
of theories, which all are founded on socio-instrumental pragmatism: Workprac-
tice Theory, Business Action Theory, Information Systems Actability Theory. He
has a great interest in interpretive and qualitative research methods, and he has
contributed to the development of Multi-Grounded Theory (a modified version of
Grounded Theory). He is editor-in-chief for the journal Systems, Signs & Actions
(www.sysiac.org).

Anita Greenhill serves as a lecturer in Accounting & Finance at the University of
Manchester. She received her PhD from the Engineering and Information Technology
Faculty, Griffith University. Anita has over 50 published articles in various fields
of interest and expertise: information systems; virtual communities; sociology;
skills acquisition in information technology; gender and information technology;
information technology policy and education; and qualitative research methods.
Her research has appeared in the International Journal of Technology and Human
Interaction, the Journal of Information and Society, and the Journal of New Tech-
nology, Work and Employment.

Albert L. Harris is a professor in the Department of Computer Information Systems
at Appalachian State University, USA, and is editor-in-chief of the Journal of Informa-
tion Systems Education. He received his PhD in MIS from Georgia State University,
his MS in systems management from the George Washington University, and his BS
in quantitative business analysis from Indiana University. Dr. Harris teaches a variety
of graduate and undergraduate classes in information systems. He is a member of the
Board of Directors for the Education Special Interest Group (EDSIG) of AITP, served
for three years as treasurer of EDSIG and is a member of the Board of Directors of the
International Association of Information Management (IAIM). His research interests
include: IS education effectiveness, IS ethics, and international IS. He has published
extensively in refereed journals and international, national, and regional conference
proceedings and has written chapters in several books.

Lynette Kvasny serves as an assistant professor of information sciences and tech-
nology, and a founding member of the Center for the Information Society at The
Pennsylvania State University, USA. She earned a PhD in computer information
systems from the Robinson College of Business, Georgia State University. She is the
recipient of the National Science Foundation CAREER award. Her research inter-
est includes the digital divide, IT workforce diversity, and community informatics.
Her research has appeared in the Data Base for Advances in Information Systems,
Information Systems Journal, the Journal of Computer Mediated Communication,
International Journal of Technology and Human Interaction, and Information,
Communication and Society.
Mark Lycett has a BSc in computing and business management (Oxford Brookes), an MSc in information systems (Brunel University, UK) and a PhD in information systems (Brunel University). Prior to returning to education, he spent a number of years in industry and has both worked on and managed a number of national and international business change/development projects. His research concentrates on all aspects of organisational and information systems development and he has a number of publications in these areas. He can be contacted at mark.lycett@brunel.ac.uk.

John McCarthy is a psychologist whose research is concerned with conceptualising aesthetic and experiential perspectives on technology and teasing out the implications for theories of design and use of interactive systems. He is a senior lecturer in the Department of Applied Psychology, University College Cork, Ireland.

Lisa Meekison has a doctorate in cultural anthropology and has worked as a brand researcher and strategist in the UK and Canada for four years. She currently resides in Toronto.

Margreet B. Michel-Verkerke spent thirteen years with teaching nurses and doctors-assistants after her graduation as a physician. During this period, she developed an interest in the application of information and communication technology in education. She started to study computer science at the Open University. In 2000, she continued her studies at the University of Twente, The Netherlands, which resulted in her graduation with an MSc in business information technology in November of 2003. From 1998, she worked as a project manager in the area of e-learning in vocational education. She decided to switch to the application of ICT in healthcare in 2001, when she became a research assistant at the University of Twente. Her main fields of interest are the improvement of care processes by the enhancement of cooperation and coordination by use of ICT and the electronic patient record. In 2004, she started to put her knowledge in practice as senior staff in Trivium zorggroep Twente, an organization specialized in complex care for the elderly.

Alistair Mutch is a professor of information and learning at Nottingham Trent University, UK. He has published widely on aspects of managerial information use in addition to interests in the history of management and the development of critical realist approaches to the study of organizations. He recently published Strategic and Organizational Change: From Production to Retailing in UK Brewing 1950-1990 (Routledge, 2005), which explores the application of critical realist ideas in a little more depth. He is currently working on the notion of “practical reasoning” in the context of applications such as data warehouses. He is a member of the editorial board of the journal Organization.
Loren Olfman is the dean of the School of Information Science and a professor of information science at Claremont Graduate University, USA, and Fletcher Jones chair in Technology Management. He came to Claremont in 1987 after graduating with a PhD in business (management information systems) from Indiana University. His research interests include: how software can be learned and used in organizations, the impact of computer-based systems on knowledge management, and the design and adoption of systems used for group work. A key component of Dr. Olfman’s teaching is his involvement with doctoral students; he has supervised 36 students to completion. He is an active member of the information systems community.

Joan A. Pastor is a professor at the Technical University of Catalonia in Barcelona, Spain, who is currently leading the Twist Group on IS qualitative research, addressing topics such as ERP procurement and ERP implementation issues by applying IS qualitative research methods. He holds a degree in computer science and a PhD in information systems engineering, both from the Technical University of Catalonia in Barcelona, Spain. He can be reached at pastor@lsi.upc.es.

Giuseppina Pellegrino is currently a Postdoc fellow at the Department of Sociology and Political Science, University of Calabria, Italy. She received a PhD in science, technology and society from the same department. As part of her doctoral dissertation, she carried out an ethnographic study of intranet technology in an Italian and a British company. She published a book and several articles in international journals and conference proceedings. Her research interests concern: the intersections between sociology of technology and organization studies; new media and everyday life; ethnographic and narrative approaches. She is currently investigating mobile technologies in everyday life at individual and organizational level.

Steve Sawyer is a founding member and associate professor at The Pennsylvania State University’s School of Information Sciences and Technology, USA. He holds affiliate appointments in Management and Organizations; Labor Studies and Industrial Relations; and the Science, Technology and Society. Steve does social and organizational informatics research with a particular focus on people working together using information and communication technologies. He can be reached at sawyer@ist.psu.edu.

Roel W. Schuring is interested in the effects of organization on processes of work and the effectiveness of technology. He started in Geneva at the International Labour Office in 1987, where he studied the effects of assembly automation on the occupational structure of assembly work. During the nineties, he mainly worked on the effective organization and introduction of programs for continuous improvement in
organizations. From 1998 to 2004, he led the research of the Healthcare Management Department of the University of Twente. He currently is the manager at the Reinier de Graaf Group Hospitals in Delft, The Netherlands.

Sarah Spiekermann is an assistant professor at the Institute of Information Systems at Humboldt University Berlin, Germany, where she is doing research in the fields of technology acceptance (especially e-privacy), knowledge management and electronic commerce. Besides science and teaching, she serves as the director of InterVal, The Berlin Research Centre on Internet Economics. InterVal is concerned with the impacts of information technology on markets and proposes new solutions to fulfill market requirements. Furthermore, she is leading the TAUCIS project which looks into future implications of ubiquitous computing for our society. Dr. Spiekermann received her PhD in computer science from Humboldt University Berlin. Before that, she worked as a strategy consultant for A.T. Kearney and as a strategic marketing manager for the EMEA for Mobile Internet inventor, Openwave Systems (Redwood City, CA). She studied business and economics at the University of Passau and at the European School of Management (ESCP-EAP) in Paris, Oxford, and Berlin, and holds a MSc degree from Aston University (Birmingham, UK).

Ton A. M. Spil is teaching in the area of business information systems at the University of Twente, The Netherlands. In 1988, he finished his master’s in computer science and started his own company consulting big firms on strategic information systems planning. In 1996, he finished his PhD thesis on the effectiveness of these plans, after which he specialized in the application area healthcare and professional organizations. In 2000, he was project manager on a big e-health research project on electronic prescription systems for general practitioners. He edited a book called, Strategies for Healthcare Information Systems, published by Idea Group Inc. in 2001. He chaired and organized many healthcare tracks on many conferences (ECIS, HICSS, & IRMA). His main subject of research in 2006 is the governance and inter-organizational aspects of information strategy and user satisfaction of IT in healthcare (USE IT).

Dick Stenmark is a senior lecturer at the Department of Applied IT at the IT University of Göteborg, Sweden. His teaching and research interests include information seeking behaviour, search engines, and knowledge management systems. Dr. Stenmark also has more than 17 years of experience from industry, where he worked as an information architect and intranet consultant. His work is published in the Scandinavian Journal of Information Systems, the European Journal of Information Systems, Knowledge and Process Management, the Journal of Management Information Systems, and he serves as an editorial member for the International Journal of Knowledge Management.
Andrea Tapia is an assistant professor of information sciences and technology at The Pennsylvania State University, USA. Prior to her arrival at Penn State, she completed a National Science Foundation funded post-doctoral fellowship at the University of Arizona entitled *Universities in the Information Age*. Her PhD is in the area of sociology and focuses on the study of technology, culture, and workplace organizations. Her most recent work examines the nature of computer-centered, high-tech industry. She is particularly interested in the how the workplace and employer-employee relations change when in a high-tech environment. At the core of her research is her interest in the social values attributed to technology and the power structures that arise within organizations due to the manipulation and use of those techno-values—in other words, techno-social capital. She can be reached by email at atapia@ist.psu.edu.

Eileen M. Trauth serves as a professor of information sciences and technology and as the director of the Center for the Information Society at The Pennsylvania State University, USA. She received her PhD in information science from the University of Pittsburgh. She has received several scholarly awards including the Fulbright Scholar Award, the E.T.S. Walton Visitor Awards from Science Foundation Ireland, and a National Science Foundation IT Workforce Grant. Her research has appeared in *MIS Quarterly, Telecommunications Policy, ACM Transactions on Office Information Systems, Information and Management, and Information Technology and People*. She has also published a book, *The Culture of an Information Economy: Influences and Impacts in the Republic of Ireland*.

Peter Wright is a cognitive scientist with an interest in the experiential, social, and cultural aspects of the design and use of interactive technologies and with developing theory and tools for experience-centred design. He is a reader in human-computer interaction in the Department of Computer Science, University of York, UK.

Yutaka Yoshinaka is an associate professor with a PhD and an AB from Cornell University (1988), and an MSc (Eng.) from the Technical University of Denmark (DTU, 1998) with specialisation in planning and technology management. His research experience includes developing tools for health services quality assessment in Japan (Instructor, Nippon Medical School, Tokyo). From 1999 to 2002, he was a PhD scholar at DTU’s Department of Manufacturing Engineering and Management. His dissertation topic was titled, *Knowledge Processes and the Sociotechnical Articulation of Magnetic Resonance Imaging in Interdisciplinary Practice*. His current teaching and research at DTU concerns sociotechnical dimensions of innovation and design practices.
