Index

4GL software 63

A
academic workload model 66
acceptable error tolerances 350
Asian American Multidimensional Acculturation Scale (AAMAS-AA) 140
asynchronous tools 177
Attitude 270
AutoCAD 252
Average Variance Extracted (AVE) 29, 48, 109-110, 136, 138, 254

B
B2EPUS 118, 140-146, 151, 158
biomedicine 301, 305
Boehm's and Turner's Model 354
boundary spanning responsibilities 207

C
C++ 290-291, 296, 298, 308, 321
choice of knowledge source 41
civic responsibility 120, 122, 131
Client-led design 4, 18
Clinical Translational Science Award (CTSA) 302
Cloud computing 314-315, 318, 320, 323, 330-332
clusters 315, 318, 331-332
Common-method variance 170
community software 334-335, 337, 342
Computational Science 314
Computer Affect 265, 271
computer playfulness 23
Computer skills transfer 99-101, 103, 108-110, 112-113, 115
computer software similarity, 100
Confirmatory Factor Analysis (CFA) 134-136, 138-140, 144-146
construct validity 50, 134-140, 144-146, 148-151, 153, 167, 227
content models. 123
correctness -See trustworthiness
Critical awareness and emancipation 4
critical systems approaches 2
Critical systems thinking (CST) 4
Cronbach Alpha 142
cross-disciplinary software systems 337
Cross-Institutional Clinical Research Project (CICTR) 302
Cumulus 316

D
data entry and retrieval 342
deep domain knowledge 348
Defense Advanced Research Projects Agency (DARPA) 317
Delphi method 100, 103, 116
demographic influence 272
Development approaches for CSE projects 292, 301
dynamic business environment 216

E
Eclipse 291-292
e-learning effectiveness 180
e-learning environments, 175, 179
electronic medical records (EMRs) 303
Emacs 291
empiricist paradigm 134
end-user computing (EUC) 61, 63
end-user computing needs 301-303, 311
end-user developers 333-334, 337-345, 347
end-user programmers 78, 96
Engineering simulations 315
enhancement 61, 63-65, 68-70
Enterprise Resource Planning (ERP) 100, 215, 240
Enterprise System (ES) 215
equity theory 217-218, 236
ergonomics 131, 266, 270
e-science and cyberinfrastructure systems 337
ETHICS (Effective Technical and Human Implementation of Computer-based Systems) 4
Ethnographic studies 246-247
Ethnography 13-14, 207, 263
Eucalyptus 316, 332
evolving requirements 292-293, 298
experiential strategy (engineering) 244
experimental protocols 339
Expert Systems 37, 126-127

F
face-to-face (FTF) meetings 194
FACTIVA 46
Factor Analysis (EFA) 134-135, 137, 140, 145
formal training 278, 305
Formula error 78, 84-87, 92
FORTRAN 290-291, 296, 298, 321
functional engineering model 3

G
Gender Role Theory 177, 185
general computer self-efficacy (GCSE) 181
General intelligence 269
globalization 19-21, 35, 160
GUI 290-291, 293, 297

H
healthy competitive environment 45
high-performance computing (HPC) 315
Hofstede’s cultural dimensions 22
human-centered product development 79
Human complexity 3

I
improvisation 242-247, 249-251, 258-264
informal social channels 164
informal social ties 162
INFORMAT 46
Information Science research 65
Information Specialists 121
information strategy 1-16, 18
instant messaging (IM) 201
Integrated Development Environments (IDEs) 291
internships 128
intuition 64, 243, 247, 342
Iron Triangle Model 353
IT management 64-65, 172, 238

J
Joint Information Systems Committee of the Higher Education Funding Council in England (JISC) 2
justice theory 217-219

K
knowledge management (KM) 40
knowledge market 42
knowledge reuse 40, 42, 51, 56

L
laboratory information management system (LIMS) 334, 338

M
MapReduce programming model 315
meaningful end-user communication 359
measurement model 28-29, 47-49, 116
multi-tasking 199, 202-206, 208-210

N
naming conventions 297, 307
National Service Learning Clearinghouse 120, 132
NetMeeting® 193
nodes 309, 318, 321-323, 325
non-testable software 349
Norms and rules (meetings) 195
novel action 245

O
object-based beliefs 43, 51, 53
OEM 252, 260
online immersive virtual environments 184
OpenNebula 316, 332
Ordinary Least Squares Regression 168
organizational knowledge integration 40-41
Orlikowski’s lens 193

P
Partial Least Squares (PLS) 28, 47, 54, 227
perceived ease of use (PEOU) 20
perceived equity 218, 226
perceived social presence 178
perceived usefulness (information technology) 20, 38
performance objectives 125, 203, 209
physical model simulation 316
plan-driven and agile development methods 348
plan-driven development models 351
power-distance 23-25, 33
process models 123, 125
project creep 129
psychological contract 215-217, 220-226, 234, 236-239
psychometric properties 28, 109-110, 253
Python 291, 296, 298
Q
queries 303-306, 308-309, 311
R
rapid iteration data transformation workflows 309
rapid prototyping 292, 295, 298
rational (pre-planned) versus experiential work 259
Record New Macro 112
remote resources 322
research domain 306
reward structure 219, 224
Rosenberg Self Esteem Scale (RSES) 140
Rule Violation errors 81, 84, 87, 92
S
scientific end-user development 333-337, 339-340, 342-344
scientific reductionism 5
scientific software 299, 303, 333-338, 342-363
service learning content model 124
Social capital theory 161, 163-164, 170-171, 174
social image cost 44
(social) network size and density 163
Soft systems thinking (SST) 4
software development process 294
Spontaneous idea creation 260
spreadsheet debugging experiments 79-81, 94
spreadsheet error rates 78
SQL queries 305
strategic level competencies 281
strategic management (bottom-up approach) 65
Structural Equation Modeling (SEM) 28, 138, 276
structural model 29-30, 32, 50-51
synchronous tools 177
T
technology acceptance model (TAM) 19-20
The Rosenberg Self Esteem Scale (RSES) 140
time-to-solution 289-290
trustworthiness 349
U
uncertainty avoidance 23
underlying structure of software similarities 103
user-centered design methodologies 335
user resistance 216, 219-220, 233, 237, 240
V
verification and validation (V&V) 83
virtual private network (VPN) 323
virtual prototyping 315
W
work-arounds 340
Workload Formula Management Information System 65
Workplace Collective Agreement (WCA) 65
