About the Authors

Zaiyong Tang is an assistant professor in the Department of Management and Information Systems at Louisiana Tech University, USA. He obtained his PhD in MIS from the University of Florida. Tang’s research interests include strategic impact of IT, artificial intelligence (in particular, intelligent agents), neural networks, knowledge management and agent-based modeling. His work has appeared in INFORMS Journal on Computing, Information & Management, Journal of Information Technology Theory and Applications, Simulation, Neural Networks and various conference proceedings.

Anthony S. Atkins is a principal lecturer in the faculty of computing, engineering and technology at Staffordshire University, UK. He has a first degree in engineering and two MS degrees in computing and engineering. He is a chartered engineer who has taught and supervised the PhD level in both disciplines in the United Kingdom (UK), Australia and U.S. Atkins also has a Churchill Fellowship in biotechnology and environmental engineering, and has several patents in biotechnology with embedded real-time systems covering the UK, European Union (E.U.), Australia and the U.S. His main interests are in strategic management, outsourcing, knowledge management, visualization, mobile computing and engineering application in computing/IT. Atkins has more than 70 international journals, conference papers and book chapters.

Brian H. Cameron is assistant professor of information sciences and technology at The Pennsylvania State University, USA. Prior to joining Penn State, he was director of information technology for WorldStor Inc., a storage service provider in Fairfax, Va. He has also held a variety of technical and managerial positions within IBM and at Penn State. His primary research and consulting interests include enterprise systems integration, storage networking, emerging wireless technologies and the use of simulations and gaming in education. He has designed and taught a variety of courses on topics that include networking, systems integration, storage networking, project management and IT consulting.

Elias G. Carayannis is full professor of management science as well as director of research on science, technology, innovation and entrepreneurship, European Union Center, of the School of Business of The George Washington University, USA. Carayannis received his PhD in technology management from the Rensselaer Polytechnic Institute in Troy, New York, in 1994, his MBA in finance from Rensselaer in 1990, and his BS in electrical engineering from the National Technical University of Athens, Greece, in 1985. Carayannis has published three books and has three more in print, as well as several publications in both academic and practitioner, U.S. and European journals, such as IEEE Transactions in Engineering Management, Research Policy, Journal of Engineering and Technology Management, International Journal of Technology Management, Technovation, Journal of Technology Transfer, R&D Management and others. He has consulted for several technology-driven government and private (large as well as small) organizations, such as the World Bank, IADB, NSF SBIR, NIST ATP, Sandia National Laboratories’ New Technological Ventures Initiative, General Electric Corporate Training & Development Center and others.

Paul L. Drnevich is a research assistant in strategic management and management information systems in the Krannert School of Management at Purdue University, USA. His research interests include: IT, firm performance and competitive advantage; multi-level issues of value creation and competitive advantage; and strategic decision making in crisis response. Drnevich has presented more than a dozen research papers at major academic conferences, and has authored numerous book chapters on strategic management and information systems subjects. He also currently has several papers under review for publication at major academic journals. Prior to his academic career, Drnevich

**Jun Du** is associate professor of information systems at the School of Management at Tianjin University, China. He received his Bachelor, Master and PhD degrees all from Tianjin University. His research interests include management information systems, industrial management, engineering economics and operations management.

**Dev K. Dutta** is a PhD candidate in business (specializing in strategy, international business and entrepreneurship) at the Richard Ivey School of Business at The University of Western Ontario, Canada. Before joining Ivey, Dutta worked for nearly 14 years in the Indian IT industry, specializing in software process improvement and organizational transformation. Dutta holds an honors degree in engineering and post-graduate qualifications in finance and human resource development. Additionally, he is a Certified Quality Analyst. Dutta’s current research interests are in the areas of multi-market competition and firm strategic choice, knowledge exchange in multinational enterprises, and learning and knowledge management in entrepreneurial ventures.

**José Manuel Ortega-Egea** is a PhD candidate and lecturer of marketing at the University of Almería, Spain. His main research interests are related to Internet technologies and services: global and cultural implications for e-marketing, e-health services and studies on the acceptance and use of diverse Internet services. His scholarly work has appeared in sources such as the *Handbook for Market Segmentation* (2004) and national and international conference proceedings and he is currently working towards publication in international journals. He also is working to complete his thesis about the acceptance and use of e-health services.

**Jungpil Hahn** is an assistant professor of management at the Krannert School of Management at Purdue University, USA. His research investigates the impact of information systems design on business value. Hahn’s research has appeared in major academic journals, such as *Information Systems Research* and *ACM Transaction on Computer-Human Interaction*; and in leading academic conferences, such as the *International Conference on Information Systems*, *ACM Conferences on Human Factors in Computing Systems*, *Workshop on Information Systems and Economics* and *Workshop on Information Technology and Systems*. He received his PhD in information and decision sciences at the Carlson School of Management, University of Minnesota.

**Luke Ho** is a management consultant in the Centre for Organizational Decision Intelligence Studies (CODIS). He has previously worked with the Altria Group Inc. and the Ministry of Defense (Singapore). He holds an MA in research, a BS (Hons) in computing science and was awarded two postgraduate scholarships from Staffordshire University, UK. His master’s dissertation on *Strategic Frameworks for Outsourcing Decision-Making* was awarded the highest classification of distinction. Ho is currently undertaking a PhD that looks to develop a holistic framework to effectively address the complex
multi-faceted nature of outsourcing decision-making. His research interests are in strategic management, outsourcing, infocomm security, computer forensics and electronic crime scene investigation.

Minh Q. Huynh joined Southeastern Louisiana University, USA, in 2003 after spending 3 years at Washington State University. His PhD in MIS is from SUNY Binghamton, New York. Huynh has published in multiple journals and refereed conference proceedings. His research and teaching interests include computer-supported collaborative learning, distance education, application of groupware in distance learning, interpretive research methodology and language action research.

Jianxin (Roger) Jiao is associate professor of systems and engineering management, School of Mechanical and Aerospace Engineering, Nanyang Technological University, Singapore. He received his PhD in industrial engineering from Hong Kong University of Science & Technology. He holds a bachelor’s degree in mechanical engineering from Tianjin University of Science & Technology in China, and a master’s degree in mechanical engineering from Tianjin University, China. His research interests include mass customization, design theory and methodology, reconfigurable manufacturing systems, engineering logistics and intelligent systems. His publications appear in IIE Transactions, Computer-Aided Design, CIRP Annals, Journal of Intelligent Manufacturing, Concurrent Engineering: Research and Application, AIEDAM, International Journal of Advanced Manufacturing Technology and International Journal of Production Research. He is a member of IEEE, ASME and IIE.

Yuan-Yuan Jiao is associate professor of business management at the School of International Business, Nankai University, China. She received her Bachelor’s degree in textile engineering from Wuhan Textile Engineering Institute; master’s degree in industrial engineering from Tianjin University; and PhD degree in systems engineering from Tianjin University, China. Her research interests include industrial management, project management and international business.

Chye-Huang Leow is currently a lecturer with the School of Business at the Singapore Polytechnic. She has lectured in subjects including retail environment and technology, organizational management, management and organizational behavior, and services marketing. Leow has assisted in several key projects with retailers in Singapore in the area of successful business strategies. Her key areas of research are business relations and technology applications to education institutions and businesses. Prior to joining the Polytechnic, Leow was in the marketing and retailing practice with local and international companies for many years, providing technical and professional advice to retailers and commercial companies. Leow is also a certified Casetrust auditor in Singapore.

Sreedhar Madhavaram, who received his PhD from Texas Tech University, is an assistant professor of marketing at Cleveland State University, USA. His work has been accepted for publication in the Journal of Business & Industrial Marketing and the Journal of...
Advertising. A frequent presenter at both national and international conferences, his research interests include marketing strategy, organizational knowledge and marketing education.

**Tong-Seng Quah** is currently an assistant professor with the School of Electrical and Electronic Engineering, Nanyang Technological University, Singapore. Quah lectures in both undergraduate as well as graduate courses, such as software development methodology, software quality assurance and project management, object-oriented system analysis and design, and software engineering. His research interests include financial market modeling using neural networks, software reliability and e-commerce. Other than academic services, Quah has undertaken joint projects with major companies in banking and airline industries, as well as statutory boards of the government body. Prior to his academic pursuits, Quah was a director of a local company dealing with industrial chemicals.

**Jari Salo** received his MS degree in economics and business administration from the University of Oulu in 2002, and his doctoral dissertation has been submitted for evaluation. Currently, he is a researcher at the University of Oulu, Finland. He has previously published in the *Journal of Euromarketing*, *E-Business Review*, *Journal of International Business and Economics* and *Review of Business*, and in several academic conferences, including HICSS, ANZMAC, EMAC and IMP. Salo has published several book chapters and also served as an ad-hoc reviewer for many conferences and edited books. His present research interests include business relationship digitization, mobile marketing and electronic commerce issues.

**Sören W. Scholz** is lecturer of marketing at Bielefeld University in Germany. His recent research interests include environmental scanning, managerial decision-making and decision support systems. In this context, he focuses on mathematical modeling of human information processing, information seeking and decision-making behavior to provide decision support in ill-defined problems areas. Furthermore, his research comprises data mining applications in classical marketing domains, such as market segmentation and marketing communications.

**Mark Shanley** is a professor of management at the Liautaud Graduate School of Business at the University of Illinois at Chicago. He has held previous appointments at Purdue University, Northwestern University and the University of Chicago. Shanley’s research on a variety of strategic management topics has been published extensively in numerous academic venues. His current research interests include mergers and alliances, health care strategies under deregulation and strategic industry groups.

**Les Singletary** has 30 years of IT experience and a PhD from Louisiana State University, USA. His dissertation research investigated the complex problem of measuring the value of IT integration. For 6 years, he was CEO and principal owner of a software company that sold products worldwide. Singletary has extensive experience with real-time integra-
tion of applications, IT administration, platform conversions (hardware and software) and electronic communications. He hosted and was chairman of the board of directors for a small international conference of mainframe computer users. His current research interests include IT/IS integration, enterprise systems, human factors and knowledge management.

José Antonio Plaza-Úbeda is lecturer of strategic management at the University of Almería, Spain. He received his PhD in business administration from the University of Almería. His main research interests are related to stakeholder management, environmental management, complementary assets, learning in organizations and innovation in the firm. His scholarly work has appeared in sources such as national and international conference proceedings. He is currently working towards publication in high-quality international journals.

Miguel Pérez-Valls is a PhD candidate and lecturer of management at University of Almería, Spain. His main research interests are related to strategic implementation, organizational structures and their implications for flexibility and innovation. His scholarly work has appeared in national and international conference proceedings, and he is currently working towards publication in international journals. He also is working to complete his dissertation about factors conditioning the adoption of flexible organizational forms, and their implications on firm performance.

Ralf Wagner is a lecturer of marketing management at the Bielefeld University in Germany. His research focuses on modeling and analysis of non-trivial behavior patterns with relevance for marketing managers. He has published articles on data mining problems in marketing, applications of neural networks, patterns of marketing practices as well as stochastic modeling of competitive interactions, and co-authored on marketing research techniques. He also offers courses at the Academy of National Economy in Moscow, the International Business School at the University of Vilnius (Lithuania) and the University of Information Technology and Management in Rzeszow (Poland). Moreover, he collaborates in the research team of the Contemporary Marketing Practices Project.

Christopher Ziemnowicz earned his bachelor’s and MBA degrees in the U.S. He served as general manager of a small firm in Washington, DC, and grew it into a multi-divisional business. He continued with teaching, business consulting and entrepreneurial activities while earning a PhD in management at the Warsaw University of Technology in Poland. Returning full-time to academia, Ziemnowicz also served director of an MBA program in Albany, New York. He is currently professor of business at Concord University, USA, part of the West Virginia State System in Athens, WV. His teaching responsibilities and research interests include strategic management, international business and entrepreneurship.
