About the Authors

ABOUT THE EDITOR:

Lauren B. Eder received her Ph.D. in Management Information Systems and an MBA from Drexel University, and a B.S. in Business Education from Boston University. She is currently Assistant Professor of Computer Information Systems at Rider University. Previously she was employed for 10 years in various marketing and technical consulting roles with IBM, Digital Equipment Corporation, and Motorola. Dr. Eder’s research interests include the adoption and diffusion of information technology in healthcare, and the infusion process of electronic commerce technology. Her research has been published or accepted for publication in *Communications of the ACM, Computer Personnel and Information Resources Management Journal*, among other journals, and has also appeared in many national and international conference proceedings. E-mail: eder@rider.edu

CHAPTER AUTHORS:

Monica Adya is Assistant Professor of Information Systems at the University of Maryland Baltimore County (UMBC). She received her PhD from Case Western Reserve University. Her research interests are in decision making and artificial intelligence, with an application area of forecasting. In particular, Dr. Adya has been working on using expert systems for forecasting. She has published papers in *Information Systems Research* and the *Journal of Forecasting*, and she is on the editorial board of the *International Journal of Forecasting* and is serving as the section editor of Research on Forecasting for that journal. Dr. Adya can be reached at adya@umbc7.umbc.edu.

Daniel K. Anderson, M.D., has a consultative clinical internal medicine practice in Grinnell, Iowa, dealing primarily with cardiovascular and renal disease and difficult or complex hypertensive patients. He recently served as assistant professor of internal medicine for Southern Illinois University School of Medicine, where he was also Director of the Springfield Health Information Network and involved in the medical informatics curriculum. He received his M.D. from SIU in 1988 and trained in internal medicine and nephrology, hypertension & electrolyte metabolism at the University of Iowa Hospitals and Clinics in Iowa City, Iowa from 1988-1993. His interest in medical computing is longstanding, and his current practice incorporates a number of database and decision support tools.

James G. Anderson, Ph.D. is Professor and Director, Social Research Institute, Purdue University, West Lafayette, Indiana. He is the associate vice president for Simulation in Health Care Society for Computer Simulation. He is a member of the editorial board of the *JAMIA* and a member of the scientific program committee of the AMIA Annual Symposium, 1999. He has made numerous academic and service contributions to AMIA,
the Simulation in Health Care Society for Computer Simulation and the International Institute of Informatics and Systemics.

**Malin Brännback** has a D.Sc. (Econ. & Bus.Adm.) and a B.Sc. (Pharmacy) from the Åbo Akademi University in Turku. She currently serves as a research director of Innomarket, research which concentrates on new and innovative products and services in the high technology industry. She has served as an associate professor in international marketing at the Åbo Akademi University and as a professor of information systems at the University of Turku. She has taught courses in strategic management, industrial marketing, electronic commerce, and group decision support systems. Her current research activities focus on knowledge-based strategic management, IT-enabled knowledge creation, electronic commerce, drug industry, and healthcare.

**Catherine E. Bridge** is a tenured Lecturer in the School of Occupation and Leisure Sciences at the University of Sydney. Ms Bridge is passionate about understanding and improving human-design interactions and is currently completing a Ph.D. on redesign for people with disabilities at the University of Sydney, in the Faculty of Architecture where she is an acknowledged expert in the area of environmental assessment and redesign. Her primary research and consultative activities both as a clinician and as an academic have centered on the role of environmental interventions in functional adaptation for people with disabilities. Ms Bridge has authored a number of reports and co-authored a number of other publications including a book chapter in an international undergraduate text.

**Angela S. Carillo, M.A.** is Assistant Director of the Division of Continuing Medical Education at the University of Alabama School of Medicine at Birmingham, Alabama. She has participated in funds development and evaluation of web courses at UAB.

**Linda Casebeer, Ph.D.** is Assistant Professor at the University of Alabama at Birmingham School of Medicine in Birmingham Alabama. She also serves as the Associate Director of the Division of Continuing Medical Education at UAB. Her research concerns educational interventions which facilitate changes in physician performance and evaluation of medical informatics interventions.

**Walter Fierz** studied medicine at the University of Zurich (Switzerland) where he graduated as a medical doctor in 1973. After some clinical experience, he specialized in clinical immunology and was working in experimental clinical immunology in London (England), Würzburg (Germany) and Zurich. Since 1992 he is heading the clinical immunology section of the Institute for Clinical Microbiology and Immunology (IKMI) in St. Gallen (Switzerland). His year-long interest in medical informatics led in 1997 to a collaboration with the Institute for Media and Communication Management (MCM) aimed at the application of the concepts and techniques of knowledge management in the healthcare sector.

**Guisseppi A. Forgionne** is Professor of Information Systems at the University of Maryland Baltimore County (UMBC). Professor Forgionne holds a B.S. in Commerce and Finance, an M. A. in Econometrics, an M. B. A., and a Ph. D. in Management Science and
Econometrics. He has published 24 books and approximately 125 research articles and consulted for a variety of public and private organizations on decision support systems theory and applications. Dr. Forgionne also has served as department chair at UMBC, Mount Vernon College, and Cal Poly Pomona. He has received several national and international awards for his work.

David W. Forslund, a fellow of the American Physical Society, is a theoretical and computational plasma physicist who has worked in a broad range of plasma physics, from space plasma physics, to magnetic fusion to laser fusion and, more recently, in computer science. He discovered the existence of heat conduction instabilities in the solar wind, co-developed the first consistent model of collisionless shocks with reflected ions, and wrote one of the first codes to numerically evaluate the full electromagnetic dispersion relation for a magnetized plasma. He first emphasized the importance of stimulated Brillouin scattering and stimulated Raman scattering in laser fusion, and first developed a model to explain intense visible harmonics of laser light observed in CO₂ laser-produced plasmas. He published the first accurate calculations of resonance absorption of laser light in arbitrary plasma density profiles. He has developed and maintained the international laser fusion plasma simulation code WAVE, on a multitude of operating systems and machine architectures. He co-developed the first implicit electromagnetic plasma simulation code (VENUS) and used it to discover the intense surface magnetic fields which have explained a variety of phenomena in the interaction of intense light with plasmas. He has also worked in the area of developing better computational tools in improving the human-computer interface, including the first demonstration of the Network extensible Window System (NeWS™) operating in a useful way between a scientific workstation and a supercomputer. His research has also resulted in the development a distributed particle simulation code in C++ that runs on a network of heterogeneous workstations. As deputy director of the Advanced Computing Laboratory, he helped guide the installation and operation of one of the largest massively parallel supercomputers in the world and led a research project in the practical applications of distributed computing. He has over 60 publications in refereed scientific journals and has given numerous invited talks in plasma physics, computer science, and health informatics. He was principal investigator of a major research project aimed at developing integrated technologies for the National Information Infrastructure. This includes developing a fully functional, distributed graphical patient record system used by radiologists at the National Jewish Center for Immunology and Respiratory Medicine in Denver, Colorado. This first use of truly distributed object technology in healthcare was demonstrated at the Health Information Management Systems Society in 1995. He was principal investigator a project designed to enable portable massively parallel scientific applications. He is the project leader for the TeleMed project funded by the US Medical Research and Materiel Command. He is the technical leader for the Northern New Mexico Rural Telemedicine project funded by the Department of Commerce and has assisted numerous local, state and national organizations in the adoption of advanced information technology. As a member of the Object Management Group, he has worked closely on many of the standard specifications being developed by the CORBAmed healthcare taskforce, including the development and testing of prototypes of those standards. He is engaged by the Government Computerized Patient Record project in the evaluation of the architectural design of a distributed person identification system (EMPI) for linking numerous government health information systems.
**Aryya Gangopadhyay** is an Assistant Professor of Information Systems at the University of Maryland Baltimore County. His research interests include electronic commerce, multimedia databases, data warehousing and mining, and geographic information systems. He has authored and co-authored two books, numerous papers in journals such as *IEEE Computer, IEEE Transactions on Knowledge and Data Engineering, Journal of Management Information Systems,* and *ACM Journal on Multimedia Systems,* as well as presented papers in many national and international conferences. He can be reached at gangopad@umbc.edu.

**Rolf Grütter,** lic. oec. HSG, is a scientific project manager and lecturer at the Media and Communications Management Institute (chair Professor Dr. Beat Schmid) of the University of St. Gallen, Switzerland. His research interest concerns the academic discipline of medical informatics in general and the development of medical knowledge media in particular. Rolf studied veterinary medicine at the University of Zurich, Switzerland. In 1983 he accomplished his final exams, in 1990 his doctorate in the field of endocrinology of metabolism at the University of Berne, Switzerland. He studied information management at the University of St. Gallen, completing his licentiate in 1997. Rolf is an active member of the Swiss Society for Medical Informatics (SSMI). He is vitally involved in the establishment of a Swiss Curriculum in Medical and Health Informatics.

**Ray Hackney** is Director of Business Information Technology Research within the Manchester Metropolitan University. He holds a Cert. Ed, BSc (Hons), MA and Ph.D from leading universities and has contributed to research in the field of information systems with publications in numerous national and international conferences and journals. He has taught on a number of MBA programmes including MMU, Manchester Business School and the Open University. He leads the organising committee for the annual BIT and BITWorld Conference series and is a member of the Strategic Management Society and Association of Information Systems. Dr Hackney has served on the Board of the UK Academy for Information Systems since 1997. He is the Vice President Research for IRMA (USA), Associate Editor of the JGIM, Journal of EUC and ACITM. He is also a reviewer for a number of publishers, journals and conferences and is currently an Associate Editor for ICIS’99. His research interests are the strategic management of information systems within a variety of organisational context.

**Christian Heine** is research assistant at the Technical University Ilmenau, Germany. He holds a first degree in information systems from the Technical University of Ilmenau. The degree dissertation was on controlling concepts in hospitals. He aspires to be awarded doctor’s degree and is studying for his doctorate under Professor Stefan Kirn. The main field of his dissertation is the telemedicine special teleradiology. He took part in several research projects of the public healthcare sector.

**Grace J. Johnson** is a doctoral student in the Department of Marketing at Southern Illinois University at Carbondale. Her academic background includes an undergraduate degree in psychology and a master’s in business, with specialization in marketing. She worked in the pharmaceutical industry and in international business for several years before
beginning to pursue her Ph.D. in business. Her academic and work backgrounds have paved the way for her research interests, which include consumer behavior, e-business, and e-medicine.

**David Kilman** has been working in the computer science side of healthcare for many years. He has built automatic reasoning software in healthcare and contributed significantly to the HL7 and CORBAmed standards for Patient Identification. He was the originator of the concept of workshops held in 1996 to encourage the adoption of open, object-oriented standards for a master patient index. The Person Identification Service standard from the Object Management Group is a direct result of that initiative.

**Stefan Kirn** heads a chair in information systems at the Technical University Ilmenau, Germany. He holds a Ph.D. in artificial intelligence from University of Hagen (Germany), an M. Sc. in computer science and an M.Sc. in management. Stefan Kirn has published more than 50 papers in peer-reviewed international journals, and at internationally recognized conferences. He is editor-in-chief of the bookseries “Agent Technology” of Addison Wesley Longan (Germany) and the coordinator of a 6-years priority research program on Intelligent Agents in Business Applications in Germany, running from 1999-2006.

**Steven P. Klein** is an instructor at Southern Illinois University at Edwardsville. He has an M.S. in Computing and Information Systems from SIUE. He also has a B.A. in English from Oklahoma State University. His research interests include Web technologies, expert systems, and simulation.

**Robert Klepper** is a Professor in the Computer Management and Information Systems Department of the School of Business at Southern Illinois University - Edwardsville. He is author of “Outsourcing Information Technology, Systems, and Services.” His research interests include information systems outsourcing, organizational culture and information systems development and use, and electronic commerce.

**Rajiv Kohli** is the Project Leader - Decision Support Services at the corporate office of Holy Cross Health System. He is also an adjunct Assistant Professor at the University of Notre Dame. He has also taught at the University of Maryland, University College where he was awarded the Teaching Recognition Award. Dr. Kohli received his PhD in 1994 from the University of Maryland, Baltimore County campus. Dr. Kohli’s research has or is being published in *Journal of Management Information Systems, Decision Support Systems, Information Processing & Management, International Transactions in Operational Research, Topics in Health Information Management, and Healthcare Information Management* among other journals. Dr. Kohli’s research interests include organizational impacts of information systems, process innovation, and enhanced decision support systems.

**Mikko Korpela** received his Doctor of Technology degree in 1994 in Information Systems Research. Since 1984 he has been a Senior Researcher at the Computing Centre, University of Kuopio, Finland. He was involved in developing the FileMan/Kernel-based ‘MUSTI’ hospital information systems in Finland in the mid-1980s, and has been leading the ‘FixIT’ project to modernize these systems since 1995. In 1989 he was Visiting Research
Fellow at the Obafemi Awolowo University, Nigeria. Since 1997 Dr. Korpela has also been a Docent (Associate Professor) in Healthcare Information Systems at the Department of Computer Science and Applied Mathematics, University of Kuopio.

**Robert Kristofco, M.S.W.,** is Associate Professor of the University of Alabama at Birmingham School of Medicine in Birmingham Alabama. He also serves as the Director of the Division of Continuing Medical Education at UAB. He is a board member and officer of the Alliance for Continuing Medical Education. He has directed medical informatics initiatives including web course development at UAB.

**Anand Kumar** is an Assistant Professor of Marketing at Southern Illinois University at Carbondale. He holds a PhD in Business from Indiana University, Bloomington. His teaching and research are focused on the general area of consumer behavior. His specific research interests include customer delight, customer value, managerial and consumer decision making, affect, memory, and consumer retention.

**Hans Lehmann,** Austrian by birth, is a management professional with some 25 years of business experience with information technology. After a career in data processing line management in Austria he worked as an information technology manager in the manufacturing and banking sector in South Africa. After completing an MBA, he joined Deloitte’s and worked for some ten years in their international management consultancy firm in Zimbabwe, London and New Zealand. Hans’ work experience spans continental Europe, Africa, the United Kingdom, North America and Australasia. He specialised in the development and implementation management of international information systems for a number of blue-chip multi-national companies in the financial and manufacturing sectors. In 1991 Hans changed careers and joined the University of Auckland, New Zealand, where his research focuses on the strategic management of international information systems.

**Michèle L. Lemaire, M.D., M.A.** is a neuropsychiatrist and a sociologist. She is the co-founder of Anabase International Corp., a global healthcare organization. Anabase provides strategic integrated project planning and management services to optimize drug and medical device research and development. Anabase develops user friendly, Web-based information systems, technology and methodologies to support global clinical research. Under development are Web-based computer-aided chronic disease and patient self-management systems aimed at improving healthcare through empowering both patients and their physician.

**Neil McBride** is a Principal Lecturer in Information Systems at De Montfort University. Before joining De Montfort University in 1990, he worked as a programmer, analyst and systems development consultant carrying out analysis, development, quality assurance and training. He was involved in the the development and implementation of systems within hospitals. His research interests include object technology, information systems failure, information systems strategy in the public sector, and business strategy for the Internet. He has published papers in European Management Journal, Information Systems Journal and the International Journal of Public Sector Management. His work has
applied post-modernism, chaos theory and actor-network theory to understanding information systems problems.

**Juha Mykkänen** graduated with a master’s degree in Computer Science from the University of Kuopio in 1998, on the architectures of healthcare information systems based on the web browser technology. He has been working in the ‘FixIT’ project of the University of Kuopio, Computing Centre, since 1997, being in charge of developing the Delphi-FixIT toolkit. His further research interests include the distributed component approach to encapsulating the business logic of healthcare applications.

**Joe Noone** is a currently undertaking a PhD in the Health Informatics Research Group at the Levels Campus of the University of South Australia. His work centres on the effectiveness and suitability of clinical practice guidelines for health practitioners for the care of the chronically ill. He holds an undergraduate degree of a Bachelor of Health Sciences with Honours.

**Arkalgud Ramaprasad** is a Professor in the Department of Management at Southern Illinois University at Carbondale and Director of the Pontikes Center Management of Information. He teaches and conducts research in strategic management and management of information, and promotes industry-university cooperation in education and research related to management of information. He obtained his PhD from the University of Pittsburgh in 1980. Prior to that he obtained his MBA from Indian Institute of Management, Ahmedabad, India, and BE (Electrical) from the University of Mysore. He has published in *Behavioral Science, Management Science, Academy of Management Review, Omega, Decision Sciences* and other journals. He has received research grants from major corporations such as Comdisco, Chrysler, IBM and Bozell Worldwide.

**Mika Räsänen** graduated with a master’s degree in Computer Science from the University of Kuopio in 1999, on the application integration architectures of healthcare information systems, with emphasis on the distributed objects technology. His study was part of the ‘FixIT’ project of the University of Kuopio, Computing Centre.

**Madhusudhan Reddy** is an MBA student at Southern Illinois University at Carbondale.

**Pekka Reijonen** received his M.Soc.Sc. in Psychology from the University of Turku. He is a researcher at the Information Systems Laboratory Laboris at the University of Turku. His research interests are usability and deployment issues of information systems in organizations and he currently is working on a project defining end-users’ skills and knowledge requirements and their evaluation.

**Hellevi Ruonamaa** received her master’s degree in mathematics from the University of Helsinki in 1985. She has been working in the University of Kuopio, Computing Centre, since 1989, being in charge of the FileMan/Kernel technology and coordinating the technological development in the ‘FixIT’ project since 1995.
Simeon J. Simoff has an original interdisciplinary way in design computing, combining in his teaching and research the elegant and structured approach of mathematics, visual attractiveness and beauty of multimedia computing, and dynamics of computer-mediated communication. He has published numerous papers in journals and books in data analysis, artificial intelligence and design science, and co-authored a book about virtual design studios. Currently Dr Simoff is a Research Fellow at the Key Centre of Design Computing and Cognition, University of Sydney. His teaching and research work is connected with data mining and analysis for knowledge discovery in digital media, distributed information systems, multimedia communication and flexible learning environments.

Riitta Söderlund has a DDS (Specialist in Healthcare) and a M.Sc. (Computer Science) from the University of Turku. She currently serves as a researcher of Innomarket, the research of which concentrates on new and innovative products and services in the high technology industry. She has served as an assistant in the Department of Computer Science at the University of Turku and as a dentist in the Health Center of Turku. Her current research activities focus on information technology used in healthcare, especially on the issue of whether it is possible to make activities of healthcare more efficient and effective using new IT solutions.

Marko Sormunen graduated with a master’s degree in Computer Science from the University of Kuopio in 1998, on converting a client/server systems development toolkit to the Java applet technology. He has been working in the ‘FixIT’ project of the University of Kuopio, Computing Centre, since 1997, being in charge of developing the Web-FixIT toolkit.

Katarina Stanoevska-Slabeva studied business administration at the Faculty of Economics of the University “Kiril and Metodij” in Skopje, Macedonia, and accomplished her doctorate at the University of St. Gallen, Switzerland, in 1997 in the field of knowledge management and business process redesign (http://www.netacademy.org/netacademy/register.nsf/homepages/kstanoevska-slabeva). She is currently working as a senior lecturer and as a scientific project manager of the research area “Media Platforms and Management” at the Institute for Media and Communications Management at the University St. Gallen. Her research interests are knowledge media platforms, ontologies, concepts for management of knowledge management platforms and reference models for component-based knowledge management.

Jeanine W. Turner received her Ph.D. from the Ohio State University. Her research explores the human factors and management issues involved in the introduction of new communication technologies within organizations and the development of virtual organizations. Specifically, she has studied the implementation of telemedicine technology as a means of augmenting the delivery of healthcare services, use of computer-mediated bulletin boards as a form of social support, and use of videoconferencing technology and the internet for distance education. Turner is an assistant professor in The McDonough School of Business at Georgetown University and holds a joint appointment with the Georgetown University School of Medicine.
Jim Warren is Director of the Health Informatics Research Group and Senior Lecturer in Computer and Information Science at the University of South Australia. He is interested in the nexus of human-computer interaction and decision support, especially as it applies to the health sector. Much of his work focuses on technology for the future computing workstation of the general practitioner. He is also interested in on-line learning environments. He holds the PhD in Information Systems and B.S. in Computer Science from the University of Maryland Baltimore Country (UMBC).

Bernard M. Waxman is an associate professor at Southern Illinois University at Edwardsville since 1989. He has an M.A. degree in mathematics from the University of Illinois at Urbana-Champaign and a Doctoral degree in computer science from Washington University in St. Louis. His research interests include computer networks and algorithms with an emphasis on approximation algorithms and multicast routing. Prior to receiving his degree in computer science, Dr. Waxman served as the president of a professional photoprocessing laboratory and taught high school mathematics.

Terence Wee, a postgraduate student at the University of Auckland, is currently on a year’s work-experience in Singapore.

Jerry B. Weinberg is an Assistant Professor in the Department of Computer Science of the School of Engineering at Southern Illinois University – Edwardsville. He received the B.S. degree in nursing from Indiana State University, Terre Haute, the B.S. degree in computer science from the University of South Carolina, Columbia, and the M.S. and Ph.D. degree in computer science from Vanderbilt University, Nashville, TN. His research interests include abductive reasoning, inductive learning, medical diagnosis, and the application of conceptual clustering and concept formation to database mining and knowledge discovery. Dr. Weinberg is a member of AAAI, IEEE, and ACM.

Xudong William Yu is an Assistant Professor in the Computer Science Department at Southern Illinois University-Educatorville. He received his Ph.D. in computer science from Vanderbilt University in 1992. His research interests include model-based reasoning and diagnosis, hybrid systems for diagnosis, knowledge-based systems, modeling and analysis of complex systems, and machine learning.

David Ziege is the manager of financial analysis at the corporate office of Holy Cross Health System. He has worked at the corporate office for nine years, the last four years as project leader for the cost function. He received his MS in administration from the University of Notre Dame in 1996 and his BS in accounting from Ball State University in 1986. Mr. Ziege’s work has recently been published in *Topics of Health Information Management*. His professional interests involve incorporating cost and DSS information into managing operations.
