About the Authors

Jonathan K. Lazar is an Assistant Professor in the Department of Computer and Information Sciences, in the College of Science and Mathematics at Towson University. He has a number of research publications focusing on human-computer interaction issues in the Internet environment. Specifically, Dr. Lazar is interested in user error, user training, user satisfaction, user-centered design methods, web usability, and online communities. He is the author of the book, *User-Centered Web Development*, published by Jones and Bartlett Publishers. Dr. Lazar has integrated service-learning in a number of different information systems courses, and was named the Towson University Faculty Advisor of the Year in May 2000.

***

John Borton is currently Chair of the USC Department of Computer Information Systems. He has been with the university since 1983. Prior to coming to USC, Dr. Borton worked in industry as a programmer, systems analyst, and database administrator. He received his BA in Social Studies and Math Education from Purdue University, his MS in Statistics from the University of Northern Colorado, and his PhD in Information Systems from the University of Colorado at Boulder. He recently completed a one-year sabbatical with Oracle Corporation and became an Oracle Certified DBA.

Roger Boyle won a mathematics doctorate from the University of York in 1978, and has worked in Computing at the University of Leeds for over 20 years. He has devoted much of the last 10 years to student recruitment and has put special effort into recruiting from non-traditional and under-represented groups. He has published widely in the teaching of computing in higher education. His primary research interests are in AI and computer vision.

John M. Carroll is Professor of Computer Science, Education, and Psychology, and Director of the Center for Human-Computer Interaction, all at Virginia Tech. His research interests include methods and theory in human-computer interaction,
particularly as applied to networking tools for collaborative learning and problem-solving. His most recent books are *Minimalism Beyond “The Nurnberg Funnel”* (MIT Press, 1998) and *Making Use: Scenario-Based Design of Human-Computer Interactions* (MIT Press, 2000).

**George Chin Jr.** is a Senior Research Scientist at Battelle Pacific Northwest Laboratory. Prior to joining Battelle, he was a PhD candidate in the Center for Human-Computer Interaction at Virginia Tech. His research has been in the areas of participatory design, ethnographic methods, computer-supported collaborative work, computer-supported collaborative learning, problem-solving environments, and human-computer interaction.

**James R. Coakley** is an Associate Professor in the College of Business at Oregon State University. He received his PhD in Accounting Information Systems from the University of Utah in 1982. His research interests include strategic alignment of IT infrastructure, applications of artificial neural networks, and the use of information technology to teach information technology. Dr. Coakley has published in journals such as *Expert Systems with Applications, International Journal of Intelligent Systems in Accounting, Finance and Management, Journal of Management Education, Journal of Systems Management, Journal of Informatics Education and Research,* and *Management Accounting.*

**Daniel R. Dunlap** is a Research Associate for the Center for Human-Computer Interaction at Virginia Tech, where he is conducting social science research related to computer use. He is currently pursuing a doctoral degree in Science and Technology Studies and is a former public school science and math teacher. His research interests include ethnomethodology, philosophy, and sociology of science and technology, especially as these areas relate to education, collaboration, and computing.

**Roger W. Harris** received a PhD in Information Systems from the City University of Hong Kong in 1997. By 2001, he was Associate Professor at a university in Sarawak, Malaysia, leading a team of researchers concerned with the use of the Internet for development in rural and remote communities. He now coordinates the learning and evaluation activities of a group of Asian telecentre projects, known as the PanAsia Telecentre Learning and Evaluation Group (PANTLEG), an off-shoot of the Canadian Government’s International Development Research Center (IDRC). In September 2001, he took up a visiting position at Central Queensland University, Australia.
Steven Hawley is a Visiting Assistant Professor at Wright State University. He currently serves as Principal of the Cincinnati Virtual High School and co-founder of the Cyberstars program. In addition to serving as Director of the Hamilton/Clermont Cooperative Association of Boards of Education, he has taught youth at all levels and served as director of a teacher training program that provided a collaborative for five regional universities. His current focus is on urban youth empowerment through technology.

Philip L. Isenhour is a Research Associate with the Center for Human-Computer Interaction at Virginia Tech. His research is currently focused on adaptable software infrastructure to support networked and collaborative applications.

Kathy S. Lassila is Associate Professor of Computer Information Systems (CIS) at the University of Southern Colorado (USC). She has over 11 years of IT industry experience as a systems analyst, software developer, technical services manager, and IT consultant. Her current research interests include the societal impacts of IT, the effectiveness of web-based IT education, and the organizational impact of information systems. Dr. Lassila received her BA in Economics from the University of Wisconsin–Eau Claire, her MBA with an emphasis in Organization Development from the University of Wisconsin-Milwaukee, and her PhD in Information Systems from the University of Colorado at Boulder. She is responsible for the Senior Professional Project course in the CIS curriculum.

Cindy LeRouge, CPA, is a PhD student in Information Systems and Decision Sciences at the University of South Florida. She received her MS in accounting from the University of New Orleans. Her research focuses on information technology education and training, organizational learning, and telemedicine. Ms. LeRouge has served consulting, training, and analyst roles for two enterprise system software companies; provided audit, tax, and consulting services for two “Big 6” public accounting firms; and worked as a controller in the medical supply, intellectual property, and petrochemical industries.

Doris K. Lidtke is a Professor of Computer and Information Sciences at Towson University. She has been an active member of ACM serving as SIGBoard Chair, on Council, and on the Education Board. She was a member of the committee which developed Curriculum ’91 and Information Systems-Centric Curriculum (ISCC ’99). She is a member of the IEEE-Computer Society Golden Core. She has been deeply involved in computing accreditation, served as one of the first Team Chairs, as President of CSAB, and as Principal Investigator for the NSF-funded grant which developed the “Draft Criteria for Accreditation of
About the Authors

Carlos J. Navarrete is Associate Professor in the Computer Information Systems Department at the College of Business Administration of the California State Polytechnic University, Pomona. He holds a BSc from Instituto Politecnico Nacional, Mexico, and a PhD in Management Information Systems from Claremont Graduate University. Before joining California State Polytechnic, Professor Navarrete worked for Universidad Iberoamericana, Mexico, where he was the Chair of the Information Systems Department. His research interest is the use of information technology to support individuals, groups, and organizations’ productivity. Dr. Navarrete has received several awards through his academic carrier. He was Fulbright Scholar from 1991 to 1994.

Dennis C. Neale is a Human Factors Engineer who recently worked as an Evaluation Specialist for the Center for Human-Computer Interaction at Virginia Tech. He is currently pursuing a doctorate degree in Industrial and Systems Engineering at Virginia Tech. His current research interests include usability engineering, collaborative systems, and video-mediated communication.

Anthony F. Norcio is a Professor of Information Systems at the University of Maryland-Baltimore County (UMBC). Dr. Norcio is also the Co-Director (with Dr. Marion J. Ball) of the World Health Organization (WHO)/Pan American Health Organization (PAHO) Collaborating Center for Health Informatics. He serves as an External Advisor to the PAHO and to the Inter-American Development Bank (IDB) on computing and health informatics. He is an invited member of the PAHO/IDB Health Task Force of the Informatics 2000 Initiative for Latin America and the Caribbean. He also currently serves as a Computer Scientist at the Artificial Intelligence Center of the Naval Research Laboratory, and has served as the Scientific Advisor to the Mathematical, Computer, and Information Sciences Division of the Office of Naval Research. He regularly participates on planning and program committees for national and international conferences. Dr. Norcio has published dozens of scientific papers in various journals, as well as the proceedings of numerous national and international conferences.

James Pick is Professor in the School of Business at University of Redlands. He holds a BA from Northwestern University and a PhD from the University of California, Irvine. He has authored seven books and more than 90 scientific papers and book chapters in geographic information systems, management information systems, demographic studies of Mexico and the U.S., environmental
systems, and simulation. His most recent book is *Mexico City in the World Economy* (Westview Press, 2001). He received the outstanding faculty teaching and research awards from the University of Redlands, and recently a Ford Foundation grant and senior Fulbright senior lecturer/researcher award.

**Randal D. Pinkett** is a member of the Epistemology and Learning Group at the MIT Media Laboratory, and the President and CEO of MBS Enterprises, an educational services and community technology consulting company headquartered in Plainfield, New Jersey. Dr. Pinkett received a BS degree in Electrical Engineering from Rutgers University, MS degree in Computer Science from the University of Oxford as a Rhodes Scholar, and MS in Electrical Engineering, MBA, and PhD degrees from MIT. He has been featured in *Black Enterprise* and *Ebony* magazines, in their “30 Leaders for the Future” issues, and is also listed in *Who’s Who Among American Entrepreneurs* and *Who’s Who Among African-Americans*.

**Ann Roberts** graduated from the University of St. Andrews and the University of London. She has worked in Computing at the University of Leeds for over 15 years. Her main responsibility is school and industrial liaison. Her chief interest is in providing summer schools and introductions to the university for pupils from schools in the inner-city areas of Leeds.

**Mary Beth Rosson** is Associate Professor of Computer Science and Fellow of the Center for Human-Computer Interaction at Virginia Tech, where she is working in the areas of human-computer interaction, computer-supported cooperative work, and usability engineering. She has recently co-authored a book with John Carroll, *Usability Engineering: Scenario-Based Development of Human-Computer Interaction* (Morgan Kaufmann).

**Cynthia Ruppel** is an Associate Professor at Crummer Graduate School. Her research interests include the introduction and use of telecommunications technology to conduct business, including telecommuting, e-business, and virtual organizations. She has published in *IEEE Transactions on Professional Communications, IEEE Potentials, Journal of Business Ethics, Information Resource Management Journal*, and *Journal of End User Computing*.

**David Ruppel** is a PhD student in the EECS Department of the College of Engineering at the University of Toledo. He has an MS in Mathematics and a Computer Science Certificate from the University of Akron, and a BS in Secondary Education from Concordia College in Seward, Nebraska, with additional work in
Computer Science from Kent State University. He has been a Visiting Instructor in Mathematics and Computer Science at the University of Akron and in Computer Science at Cleveland State University. His research interests are in networking, with particular interests in the areas of ATM networks and active networking.

Ruth V. Small, PhD, is a Professor at the School of Information Studies, Syracuse University. Dr. Small is widely published in the instructional design, development, and evaluation areas. She has authored or co-authored a number of research articles and books, and consults actively in these areas.

Craig K. Tyran is an Associate Professor in the College of Business and Economics at Western Washington University. He received his PhD in Management Information Systems from the University of Arizona. His research interests include the organizational applications of collaborative technology, systems development and implementation, and the educational applications of information technology. Dr. Tyran’s research has been published in a number of publications, including MIS Quarterly and the Journal of Management Information Systems. He has also presented his research at numerous national and international conferences.

Murali Venkatesh, PhD, is an Associate Professor at the School of Information Studies, Syracuse University, where he teaches courses in systems and telecommunications. He founded CAL and CITI, and currently directs CITI. His research interests include telecommunications systems planning and design, and broadband community network development. Dr. Venkatesh’s research has been presented at leading academic research conferences and other scholarly forums.

Harold W. Webb is an Assistant Professor in the College of Business at the University of South Florida. He received his MBA and PhD in Management Information Systems from Texas Tech University. His work experience includes the development of advanced systems requirements for the United States Army. His research interests include the effects of information technology on learning at the individual and organizational level. He is also interested in research into the behavioral aspects of software testing, as well as decision support systems and electronic commerce.
