About the Contributors

Daniel J. Power is a Professor of Information Systems and Management at the College of Business Administration at the University of Northern Iowa, Cedar Falls, Iowa and the editor of DSSResources.COM, the Web-based knowledge repository about computerized systems that support decision making. He has authored four books on Decision Support Systems and his DSS Concepts book (2002) is a broad ranging handbook on the fundamentals of building decision support systems. In 1982, Professor Power received a Ph.D. in Business Administration from the University of Wisconsin-Madison.

* * *

Frédéric Adam is Associate Professor in Business Information Systems at University College Cork (UCC) in Ireland and Visiting Research Fellow in the School of Economics and Management at Lund University (Sweden). He holds PhDs from the National University of Ireland and Université Paris VI (France). His research interests are in the area of decision-making and decision support and in the area of ERP. He has authored and edited 7 books and has over 20 journal papers published in international journals including Information and Management, the Journal of Strategic Information Systems, Decision Support Systems, and the Journal of Information Technology. He is the Editor-in-Chief of the Journal of Decision Systems and the Chair of the Working Group 8.3 on DSS of the International Federation for Information processing (IFIP). In 2010, he was awarded the IFIP outstanding Service Award for his on-going work within the working group. He has recently been appointed Head of the Graduate School of the College of Business and Law at UCC.

Giner Alor-Hernandez is a full-time researcher of the Division of Research and Postgraduate Studies of the Instituto Tecnologico de Orizaba. He received a MSc and a PhD in Computer Science of the Center for Research and Advanced Studies of the National Polytechnic Institute (CINVESTAV), Mexico. He is involved in several Mexican research projects and he has been a committee program member of several international conferences in computer science. His research interests include Web services, e-commerce, SemanticWeb, Web 2.0, service-oriented and event-driven architectures and enterprise application integration. He is an IEEE and ACM Member.

Henry E. C. Amirtharaj is working as associate professor of mathematics, PG and research department of mathematics, Bishop Heber College, Tiruchirappalli, India. He has a teaching experience of nearly twenty five years. He is a Research Guide for M.phil and PhD in mathematics. His area of research are numerical analysis, mathematical statistics, operations research and fuzzy set theory. He completed
Ph.D in the year 2002 from Regional Engineering College, Bharathidasan University, Tiruchirappalli, India. His papers are published in seven international journals, and he has presented papers in many international conferences.

Lorella Cannavacciuolo gained her Phd in Business and Managerial Engineering. She carries out her research activity within the Department of Business and Managerial Engineering at the University of Naples Federico II. Her research interests focus on the development of models to better manage organizational issues, such as design and implementation of Planning and Control Systems in health organizations and small firms. Currently, her research is also oriented to deepen the theory and models concerning the Social Network Analysis (SNA). She is applying theoretical concepts and models of SNA in different research fields, such as innovation of small firms, growth patterns in biotech sector, and online collaborative technologies.

Ricardo Colomo-Palacios is an Associate Professor at the Computer Science Department of the Universidad Carlos III de Madrid. His research interests include applied research in Information Systems, Software Project Management, People in Software Projects and Social and Semantic Web. He received his PhD in Computer Science from the Universidad Politécnica of Madrid (2005). He also holds a MBA from the Instituto de Empresa (2002). He has been working as software engineer, project manager and software engineering consultant in several companies including Spanish IT leader INDRA. He is also an Editorial Board Member and Associate Editor for several international journals and conferences and Editor in Chief of International Journal of Human Capital and Information Technology Professionals.

Ray Creely recently retired after nearly 30 years with International Business Machines (IBM). After receiving his B.S. in Business Administration at University of Missouri - St. Louis, he began as a systems engineer and later moved to sales and management positions. During his career he had responsibilities for regional, national and international organizations. Currently he spends much time volunteering in a variety of capacities. As the current president of the University of Missouri, St. Louis (UMSL) Information Systems Department Advisory Board and a member of the College of Business Administration’s Leadership Council, Ray has been working with faculty and board members to provide career awareness programs for high school students throughout the St. Louis area. Ray also serves as the chair for the Soldan International Studies High School Advisory Board, serves on the St. Louis Public School A+ Partnership Plan Advisory Committee and the Mayor’s Commission on Children, Youth and Families. Ray is also a participating member of the Rockwood School District Partners In Education (PIE). Ray also has served two terms on the Workforce Investment Board where he also serves as the chair of the Youth Council.

Mary Daly is a lecturer in Business Information Systems at University College Cork (UCC) in Ireland. Her research interests include executive decision-making and decision support. Prior to joining UCC, she has gained considerable experience in industry in senior IT Management positions.

Rhys Davies is a Computer Science graduate working for the University of Birmingham. From 1999 he worked in a support role in the Electronic, Electrical and Computer Engineering Department before moving to the Birmingham Centre for Rail Research and Education in 2004. His research interests are focussed on interoperability and data exchange systems in the railway industry, in particular the application of ontologies and semi-autonomous agents to provide solutions.

John DeGroote is a geoinformatics specialist with over nine years of professional academic experience as a geospatial practitioner with expertise in spatial decision support systems. He has successfully applied geospatial technologies such as geographic information systems (GIS), global positioning systems (GPS), remote sensing, and GIS servers for a variety of research projects in various disciplines including natural resource management, ecology, sociology, and epidemiology. Mr. DeGroote is an author or co-author on many peer-reviewed publications and co-wrote a book entitled Spatial Decision Support Systems: Principles and Practice.

Anna De Liddo is an Urban Planner and Designer; she took a MSc in Civil Engineering at Politecnico di Bari, Italy and a MSc in Environmental Policy and Management at Institut National des Sciences Appliquées in Lyon (France). She gained her PhD at Politecnico of Bari, Italy, investigating ICT for Participatory Planning and Deliberation. In the course of the PhD she took individual responsibility in several international projects (Hypermediadiscourse, Palette and OpenParks) in the UK, Greece and Italy. She held a 12 month Post-Doc position at the Open University within the ESSENCE Project, investigating and evaluating human-centred computing tools to help tackling wicked problems such as Climate Change. She is currently Research Associate on Collective Intelligence at Knowledge Media Institute of the Open University, working in the Open Learning Network project (OLnet) on the design and development of a Collective Intelligence socio-technical infrastructure to enhance collaborative learning in Open Education. She is member of the GSm (Global Sense making) community and she developed links with research networks concerned with human-centred computing and the impact of computer technology on society, i.e. CPSR (Computers Professionals for Social Responsibility) and CIRN (Community Informatics Research Network).

Amit V. Deokar is an assistant professor of Information Systems in the College of Business and Information Systems at Dakota State University. His recent research interests are in decision support systems, business process management, collaboration processes and technologies, knowledge management, and healthcare informatics. He has published several conference publications, journal articles, and book chapters in these areas. He holds a BE in Mechanical Engineering from V.J. Technological Institute, Mumbai, a MS in Industrial Engineering from the University of Arizona, and a PhD in Management Information Systems from the University of Arizona. He is a member of AIS, MWAIS, ACM, and AAAI.

A. Duffy is Vice Dean of Research in the Engineering Faculty at the University of Strathclyde. He is a Chartered Engineer, Chartered IT Professional, Fellow of the British Computer Society, Fellow of the Institute of Engineering Designers, and until recently the Vice President, and prior to this the President, of the Design Society, an international body encompassing all aspects and disciplines of design. He has
published over 200 articles, is the editor of the *Journal of Engineering Design* and is on the editorial boards of the journals of *Research in Engineering Design, Design Computing, and Artificial Intelligence in Engineering Design Analysis and Manufacture.*

**John Easton** is a Research Fellow at the University of Birmingham. Between 2004 and 2009 he worked with the Biomedical Informatics, Signals and Systems laboratory, where his research focussed on the application of techniques from graph theory to metabolic datasets. In June 2009 he moved to the Birmingham Centre for Railway Research and Education, where his current research interests are centred around methods for the storage, processing and display of railway condition monitoring data; in particular data representation and exchange via ontologies, and parallel, semi-autonomous data processing by software agents.

**Omar F. El-Gayar** is a professor of Information Systems and Dean of Graduate Studies and Research, Dakota State University. His research interests include: decision support systems, multiple criteria decision making, and the application of decision technologies in healthcare, environmental management, and security planning and management. His inter-disciplinary educational background and training is in information technology, computer science, economics, and operations research. Dr. El-Gayar’s industry experience includes working as an analyst, modeler, and programmer. His numerous publications appear in various information technology related fields. He is a member of AIS, ACM, INFORMS, and DSI.

**Jure Erjavec** is a junior researcher, PhD student and assistant lecturer at the Faculty of Economics, University of Ljubljana. His research interests include business process management, supply chain management and operations management. He co-authored several scientific papers with two of them published in leading SCI journals in the fields of operations research and production management. He participates in various research and applied projects.

**Carlos E. Escobar-Toledo** is a chemical engineer by the Faculty of Chemistry at UNAM; he received the degree of Master in Applied Sciences and PhD in Engineering (obtaining the specialty in Systems Theory) from the Universities of Louvain, Belgium and Aix-Marseille, France, respectively. His post-doctoral studies were conducted at the National Institute of Nuclear Sciences and Technology in Saclay, France. Dr. Escobar has extensive experience in the Energy and Petrochemical Industry. He worked at the Mexican Petroleum Company and in the Mexican Energy Ministry. He has been invited Professor at the Polytechnic Institute of Toulouse, France and at the Free University of Brussels, Belgium. He is currently a full-time professor at the Faculty of Chemistry at UNAM. His specialty areas are multicriteria decision making aid methods, mathematical modeling of complex systems and all intersections between the Systems Theory, Chemical Engineering and Operations Research. Dr. Escobar has published a lot of works in many international journals and assisted to international Conferences. He is President of the Specialty Commission on Systems Engineering at the Mexican Academy of Engineering and is a fellow of the Mexican Academy of Sciences.
Angel García-Crespo is the Head of the SofLab Group at the Computer Science Department in the Universidad Carlos III de Madrid and the Head of the Institute for promotion of Innovation Pedro Juan de Lastanosa. He holds a PhD in Industrial Engineering from the Universidad Politécnica de Madrid (Award from the Instituto J.A. Artigas to the best thesis) and received an Executive MBA from the Instituto de Empresa. Professor García-Crespo has led and actively contributed to large European Projects of the FP V and VI, and also in many business cooperations. He is the author of more than a hundred publications in conferences, journals and books, both Spanish and international.

Ovsei Gelman is a senior researcher at the Center of Applied Sciences and Technology Development (CCADET) of the National Autonomous University of Mexico (UNAM). He holds a B.S., M.S. and PhD in Physics and Mathematics from the University of Tbilisi, Georgia. In the last 35 years he has contributed to the advance of the Systems Science discipline and Interdisciplinary Research through the publication of approximately 250 research papers in books, national and international journals and conference proceedings, as well as by the participation as an advisor in the Engineering Graduate Program at UNAM and by the consulting for governmental and private organizations.

Juan Miguel Gomez-Berbís is an Associate Professor at the Computer Science Department of the Universidad Carlos III de Madrid. He holds a PhD in Computer Science from the Digital Enterprise Research Institute (DERI) at the National University of Ireland, Galway and received his MSc in Telecommunications Engineering from the Universidad Politécnica de Madrid (UPM). He was involved in several EU FP V and VI research projects and was a member of the Semantic Web Services Initiative (SWSI). His research interests include semantic web, semantic web services, business process modelling, b2b integration and, recently, bioinformatics.

Miro Gradisar is a full professor of information systems at the Faculty of Economics, University of Ljubljana. He received his BS and MS degrees in electronics from the University of Ljubljana and his PhD in organizational sciences from the University of Maribor. Gradisar has taught courses in management information systems to all levels of students at the University of Ljubljana and the University of Maribor. In 1999 he spent one semester as a visiting professor at the University of Baltimore and in 2007 at the University of Bremen. He has authored and co-authored five textbooks and 60 refereed scholarly articles, fifteen of them in leading European and American journals of operations research and production management.

A. Hird is a doctoral student at the University of Strathclyde where she is studying towards an Engineering doctorate in conjunction with the Systems Engineering Doctorate Centre (SEDC) located in Loughborough University. Her doctorate work is based in an industrial context within DePuy Orthopaedics (a division of Johnson & Johnson) where she is researching the coupling of human and business systems performance.

Luca Iandoli received his master’s degree in electronics engineering in 1998 from the University of Naples Federico II and a PhD in business and management from the University of Rome Tor Vergata in 2002. Since 2006, he is a professor in the Department of Business and Managerial Engineering, University of Naples Federico II. He got recently a Fulbright Scholarship in the category research scholar.
About the Contributors

His current research interests include application of soft computing techniques such as fuzzy logic and agent based systems to model organizational learning and cognition, such as in evaluation and decision making processes, and how to use collaborative internet technologies to support collective and organizational sense-making. He is a member of the editorial board of the Fuzzy Economic Review, Journal of Information Technology: Cases and Applications, and serves as associate editor for the Journal of Global Information Technology Management.

Marija Jankovic is an Assistant Professor at Ecole Centrale Paris, Industrial Engineering Department. She holds PhD degree in Industrial Engineering titled “Collaborative decision making in new product development. Application in the automotive industry.” This research project was done with the collaboration of PSA Peugeot Citroen. The main research goals concern enhancing the performance and quality of early stages of new product and/or service development. The systems’ thinking is used as base for complex system modeling in addressing new product and/or service development process. The principal research fields concern quality engineering (using approaches like applied statistics) and system modeling on order to simulate, predict and improve global system performances in collaborative engineering environment. Marija Jankovic is also an Assistant Director of a Master Program in Design Engineering and Innovation at Ecole Centrale Paris.

Rex Karsten is an Associate Professor of Management Information Systems at the College of Business Administration at the University of Northern Iowa where he teaches information systems management and information systems development. He received his Ph.D. from the University of Nebraska-Lincoln. His research has appeared in a variety of publications including the Journal of Organizational and End User Computing, the Journal of Computer Information Systems, the Journal of Research in Educational Computing, Computers and Education, and Advances in Taxation. He currently serves on the Editorial Advisory Board for the Journal of Organizational and End User Computing.

Miroljub Kljajic is a full professor of Theory of Systems and Modeling and Simulation. He holds a B.S., M.S. and PhD in Electrical Engineering at the Faculty of Electrical Engineering, University of Ljubljana, Slovenia. In 1970 he was employed at the Institute Jozef Stefan, Department for Biocybernetics and Robotics. Since 1976 he works at the Faculty of Organizational Sciences, University of Maribor. He has published over two hundred scientific articles from which 30 are in JCR. He is the recipient of several international awards for the best papers. For his successes in pedagogical work he received the Golden Medal of the University of Maribor. He was elected for the Professor Emeritus status in 2010.

José Emilio Labra-Gayo is an Associate Professor at the Computer Science Department of the Universidad de Oviedo (SPAIN), Dean of the School of Computer Science Engineering of the University of Oviedo and leader of the WESO (Semantic Web Oviedo) group. His research interests include semantic web technologies and programming languages, especially declarative programming paradigms.
Héctor A. Martínez-Berumen is an Industrial Engineer by the Instituto Tecnológico de Aguascalientes (México), he received the degree of Master in Quality Engineering from the Universidad Iberoamericana (México). He has held various positions in CIATEQ, which is a Public Research Center in Mexico, where he currently works as Quality Manager. He is a member of INCOSE and ASQ. Currently, he is a doctoral student in Systems Engineering at UNAM. He has published some works in international journals and presented research papers in international conferences.

J. McCabe works in the R&D Department at DePuy Orthopaedics, part of the Johnson & Johnson Family Of Companies. He has over 20 years experience in the Medical Devices & Diagnostics industry and in that time has worked in R&D, Manufacturing and Quality Assurance. His particular areas of interest are Innovation, Stage Gate and Portfolio Management.

K. Mendibil is a Lecturer at the Department of Design, Manufacture and Engineering Management, University of Strathclyde. Kepa has led a number of international and national research and consultancy programmes and has worked for industrial organisations on business improvement, process re-engineering and ERP implementation projects. His research interests include High Value Manufacturing, Innovation Systems and Performance Measurement. Kepa has published over 30 papers on academic journals and conference proceedings.

Manuel Mora is a full professor of Information Systems in the Autonomous University of Aguascalientes (UAA), Mexico, since 1994. Dr. Mora holds a B.S. in Computer Systems Engineering (1984) and a M.S. in Computer Science (1989) both from Monterrey Tech (ITESM), and an Eng.D. in Engineering (2003) from the Universidad Nacional Autónoma de México (UNAM). He has published around 50 research papers in international top conferences, books and/or journals. Dr. Mora is an ACM Senior Member, an AE for IEEE-TSMC Part A, co-EiC of IJITSA, and has co-edited two books on DMSS and i-DMSS topics. His main research interests are: design and evaluation of DMSS/KMS, design and evaluation of IT-based service systems, and foundations of research methods for Systems Engineering, Software Engineering and IT underpinned in the Systems Approach.

Srikanth Mudigonda is an Assistant Professor in the Computer Science Technology program in the School of Professional Studies at Saint Louis University. He received his Ph.D. in Information Systems from the University of Missouri-St. Louis. His research interests include interactive visual representations of data, software engineering education and the use of electronic media in learning. Prior to and during his doctoral studies, he worked, at different times, as a computer programmer, systems analyst, associate consultant, and an applications development manager.

Daniel E. O’Leary is a professor in the Marshall School of Business at the University of Southern California, focusing on information systems, artificial intelligence, enterprise resource planning systems and knowledge management systems. Dan received his PhD from Case Western Reserve University. He is the former editor of IEEE Intelligent Systems and current editor of John Wiley’s Intelligent Systems in Accounting, Finance and Management. His book, Enterprise Resource Planning Systems, published by Cambridge University Press, has been translated into both Chinese and Russian.
About the Contributors

Dossay Oryspayev is working towards a master of science (MS) degree from the University of Northern Iowa (UNI) in computer science and is presently working at the GeoInformatics, Training, Research, Education, and Extension (GeoTREE) Center at UNI. He was the application developer of a Microsoft Excel extension entitled SpreadsheetSDSS. Mr. Oryspayev also is presently carrying out research in parallel and cloud computing. He is proficient in a number of computer programming languages and application development environments.

Ivana Quinto received her master’s degree in SMEs Management in 2007 from the University of Naples Parthenope with full marks and honors. She is a PhD student in Science and Technology Management (XXIV cycle) at the University of Naples Federico II, Department of Business and Managerial Engineering. Her research focuses on how web-based collaborative technologies are able to support online knowledge sharing and collective decision making processes. Recently, she was at Knowledge Media Institute - Open University (Milton Keynes – UK) as visiting student for six months.

Clive Roberts is Professor of Railway Systems at the University of Birmingham and Director for Railway Research for the Birmingham Centre for Railway Research and Education. His PhD work focussed on railway condition monitoring of railway infrastructure assets. Over the last 14 years he has developed a broad portfolio of research aimed at improving the performance of the railway system. His current research interests lie in the areas of: data integration and decision support systems engineering; system modelling and simulation; traffic management; and fault detection and diagnosis, applied to railway traction, signalling, mechanical interactions and capacity. He works extensively with the railway industry in Britain and overseas. He currently leads a team of 11 research fellows and 16 PhD students.

John P. Robinson is working as assistant professor of mathematics, PG and research department of mathematics, Bishop Heber College, Tiruchirappalli, India. He has six years of teaching experience. His area of research are fuzzy set theory, fuzzy probability and statistics, fuzzy data mining and fuzzy decision making analysis. He is doing his PhD at Bharathidasan University, Tiruchirappalli, India. He has published three research papers in international journals and presented papers in five international conferences.

Alejandro Rodríguez-González is a Research Assistant and Ph.D. candidate of the Computer Science Department in University Carlos III of Madrid. He is working as researcher in Computer Science Department involved in several projects of the Spanish ministry of industry. His main research interests are Semantic Web, Artificial Intelligence and the build of medical diagnosis systems using these techniques. He has a degree in Computer Science by University of Oviedo and an M.Sc in Computer Science and technology in the specialty of Artificial Intelligence. He is also studying an M.Sc in Engineering Decision Systems at University Rey Juan Carlos.

Roberta M. Roth is an Associate Professor of Management Information Systems at the College of Business Administration at the University of Northern Iowa. She received a Ph.D. in Management Information Systems from the University of Iowa. She currently teaches courses in business application development and systems analysis and design. She is co-author of a Systems Analysis and Design textbook and has authored numerous instructor manuals and teaching supplementary material. Her research has appeared in a number of publications and her research interests include IS pedagogy and distance education.
Vicki Sauter is Professor of Information Systems at University of Missouri - St. Louis. She holds a BS, MS and PhD in Systems from Northwestern University. Her research has been in the area of business intelligence and decision support systems, and in systems analysis and design. Her current research interests include development methodologies, transnational modeling issues for decision support, linguistics and decision support, and trends of women in computing. She is author of the book, Decision Support Systems for Business Intelligence (John Wiley), and the forthcoming book, You Are Never Too Old to Surf. Her many publications that have appeared in journals such as Omega, Journal of MIS, The Database for Advances in Information Systems, International Journal of Information Technology and Decision Making, International Journal of e-Collaboration, and Communications of the ACM. Dr. Sauter currently serves as an Associate Editor for International Journal of Decision Support Systems Technology, and has served as Associate Editor for IEEE Transactions on Engineering Management, Information Resources Management Studies, and Interfaces.

Simon Buckingham Shum is a Senior Lecturer at the Open University’s Knowledge Media Institute (KMI), a 70-strong research and development lab on Future Internet, Web Multimedia, Learning and Human-Centred Computing. His background is B.Sc. Psychology (1984, York), M.Sc. Ergonomics (1988, UC London) and PhD Human-Computer Interaction (1991, York). Dr Buckingham Shum leads KMI’s Hypermedia Discourse project, investigating the interplay between theory, technology and work practices for participatory, critical discourse. He is a co-founder of the Compendium Institute and GlobalSensemaking.net, and has edited two books by Springer: Visualizing Argumentation (2003) and Knowledge Cartography (2008). He co-founded and edited the Journal of Interactive Media in Education, and has contributed to the editorial boards of the International Journal of Human-Computer Studies and New Review of Hypermedia & Multimedia.

Ashok Subramanian is the Chair of the Department of Information Systems (IS) in the College of Business at the University of Missouri-St. Louis. He has a Ph.D. in IS an M.B.A. from the University of Houston, and a B.S. in Chemistry and Physics from the University of Bombay, India. research interests include: Telecommunications & Internet Technologies, Applications, and Policies; Distributed Computing Architectures such as Service Oriented Architecture and Web Services; and Scale free networks and Social Network Analysis. He has published research papers in IS journals such as Information & Management, Omega, Journal of Information Technology Management, Information Systems & Operations Research, The American Review of Public Administration. He has extensive experience as a consultant in the areas of IT Architecture development, Corporate Policies and Standards for managing computer networks and distributed applications, Business Process design & Re-Engineering, Systems Migration & Integration, and Architecture and implementation of Converged Data Networks.

Ramanathan Sugumaran is a Professor of Geography at the University of Northern Iowa (UNI) as well as Director of the GeoInformatics, Training, Research, Education, and Extension (GeoTREE) Center at UNI. He has expertise in Geographic Information Systems, Global Positioning Systems, remote sensing, decision support technology, and computer science. He is the author or co-author of many peer reviewed journal articles focused on the application of geospatial and decision support technologies to a range of subjects including natural resources management, agriculture, urban studies, public health, and many others. Dr. Sugumaran was the lead author of a book entitled Spatial Decision Support Systems: Principles and Practice.
**About the Contributors**

**Jie Tao** is a graduate research assistant and a doctoral student majoring in Information System at Dakota State University. Jie holds a Master degree in Management (Specification in Management Information Systems) from University of Shanghai in Science and Technology, Shanghai, China. Jie’s current research interests are in Business Process Management, Semantic Web, Service Oriented Architecture and Decision Support Systems. He has several publications (in Chinese) in journals such as *Computer Systems and Application*. He also presented paper at academic conference such as Americas Conference on Information Systems (AMCIS). Jie is a student member of Association for Information Systems (AIS).

**Akinwale Adio Taofiki** received his magister in informatics from Warsaw University, Warsaw, Poland, M.Sc/PhD in economic cybernetics and informatics from Oskar Lange University, Wroclaw, Poland. His area of research interest is in database system and query optimization.

**Luka Tomat** is a junior researcher, PhD student and assistant lecturer in Academic unit for Informatics at the Faculty of Economics, University of Ljubljana, where he received his Master of Science degree from the field of information sciences. In his researches he focuses on processes modelling and simulation, business process management, development of information systems and optimization methods. He participates in several researches and projects connected with business processes optimization.

**N. Turner** is a member of the DePuy Orthopaedics WW R&D Management team (a division of Johnson & Johnson). Neville specialises in Best Practice for Innovation Processes, including Stage & Gate process for the Discovery, Concept and Development phases of New Product Development, as well as, Portfolio Analysis & Management & High Level Resource Planning. His experience covers the implementation and continuous improvement of these processes in a complex, multi site environment for new product development.

**S. Vallance** is a doctoral student at the University of Strathclyde. She is currently studying towards an Engineering doctorate in conjunction with the Systems Engineering Doctorate Centre (SEDC) located within Loughborough University. The doctorate is industrially based within DePuy Orthopaedics (a division of Johnson & Johnson), where the context of her work is based. She is researching the construction of a systems approach towards the development and implementation of New Product Development (NPD) resource management Decision Support Systems (DSS).

**Fen Wang** is currently an assistant professor in the Information Technology & Administrative Management department at Central Washington University (CWU). Before joining CWU, she worked as an Assistant Professor and Director of the Management Information Systems (MIS) program at the Eastern Nazarene College in Massachusetts. She holds a B.S. in MIS, an M.S. and a PhD in Information Systems from the University of Maryland Baltimore County. Dr. Fen Wang has over eight years of professional and research experience in information technology management. Her research focuses on intelligent decision support technologies and E-business strategies. Dr. Fen Wang has published over twenty papers and has consulted for a variety of public and private organizations on IT theory and applications.
R. I. Whitfield is a lecturer in the Department of Design Manufacture and Engineering Management at the University of Strathclyde. He has been involved in the management and conducting of research within a number of large FP5 and FP6 integrated projects within the shipbuilding industry, and has garnered significant knowledge in how to achieve collaboration between a large number of partners for successful project completion. These projects have each focused upon the development of collaborative tools and techniques for the integration of distributed design expertise across Europe. His research background subsequently covers issues relating to: co-ordination, collaboration, integration, resource management, process modelling and optimisation and modular design.

Pascale Zaraté is a Professor at Toulouse 1 Capitole University. She conducts her researches at the IRIT laboratory (http://www.irit.fr). She holds a Ph.D. in Computer Sciences / Decision Support from the LAMSADÉ laboratory at the Paris Dauphine University, Paris (1991). She also holds a Master degree in Computer Science from the Paul Sabatier University, Toulouse, France (1986); as well as a Bachelors degree Toulouse, France (1982). Pascale Zaraté’s current research interests include: Decision Support Systems; distributed and asynchronous decision making processes; knowledge modelisation; cooperative knowledge based systems; cooperative decision making. She is the editor-in-chief of the International Journal of Decision Support System Technology (IGI Global). Since 2000, she is head of the Euro Working Group on DSS (www.euro-online.org). She published several studies and works: 1 book, edited 2 books, edited 11 special issues in several international journals, 2 proceedings of international conferences, 22 papers in several international journals, 2 papers in national journals, 5 chapters in collective books, 26 papers in international conferences. She belongs the Editorial Scientific Committee of three International Journals: Journal of Decision System (Lavoisier), ComSIS, Intelligent Decision Technologies (IOSPress). She was chairing the IFIP TC8/WG8.3 conference devoted to Collaborative Decision Making (http://www.irit.fr/CDM08).
