About the Authors

**Hussein A. Abbass** is a senior lecturer at the School of Computer Science, Australian Defence Force Academy (ADFA), University of New South Wales, Canberra, Australia. He is also an honorary associate with the University of New England, Australia. Abbass holds a PhD (QUT, Australia), an MSc (University of Edinburgh, UK), research masters in OR, PG-Diploma in OR, BA and BSc (Cairo University, Egypt). Abbass has more than 14 years of experience in industry and academia and more than 90 fully refereed papers in international journals and conferences. His current teaching responsibilities include data mining, knowledge discovery in databases, modern heuristic techniques, and computational optimization. His research focuses on multi-agent systems, data mining and artificial life models. He has chaired/co-chaired a number of Australian and international conferences.

**Daryl Essam** earned his BSc from the University of New England, Australia and his PhD from the University of New South Wales. Currently, his research focuses on new algorithms for genetic programming; in particular, the sub-fields of grammars, diversity, probabilistic approaches and multi-objective optimization. He is currently employed as a lecturer at the Australian Defence Force Academy, a campus of the University of New South Wales, Australia.

Ajith Abraham is currently a distinguished visiting professor at Chung-Ang University, Korea. He received a PhD from Monash University, Australia. Before becoming a full-time academic, he had spent nearly eight years with three multi-national companies on several industrial research and development projects. His primary research interests are in computational intelligence with application areas including information security, bioinformatics, Web intelligence, energy management, financial modeling and so forth. He has co-authored more than 100 research publications in peer-reviewed, reputed journals and international conference proceedings, of which three have won “best paper” awards.

Cecilia Andrews lectures in information systems at the Australian Defence Force Academy in Canberra and has 10 years of experience in public and private enterprise as a senior consultant in systems viability and strategy. Andrews has published award-winning papers in belief systems, ethical decision making and counter terrorism internationally and within Australia. Her research, community work, advocacy and consultancy focus on ways to identify, prevent and resolve conflict and systemic violence against innocent people.

Michael Barlow, who prefers to simply be called Spike, is a senior lecturer in IT and director of the Virtual Environments & Simulation Lab (VESL, www.cs.adfa.edu.au/research/vesl), at the University of New South Wales ADFA campus (Australia). Barlow’s research activities include the areas of multi-agent systems, games technology, immersion, virtual environments, human decision-making and behavioral models, and automatic speech processing — all with a complex-systems perspective.

Bernard Colbert earned his PhD from the University of New South Wales. He has worked for the Australian Bureau of Statistics, the Defence Science and Technology Organization (DSTO) and the Telstra Research Laboratories. He has also worked for a private consulting company assessing the security of the IT assets of major banks and government organizations. Most recently, he became a visiting fellow at Deakin University (Australia), where his research interests include cryptography and graph theory.
Robert Cox is a lecturer in computing at the University of Canberra, Australia. His research interests include wargames, military simulations, neural networks and complex adaptive systems. He has a lifelong interest in military history and wargames, playing his first wargame at the age of 14. He had more than 20 years’ commercial experience as a software engineer before moving to academia in 2001. He is currently studying for his PhD in artificial intelligence in computer wargames. He lives in Canberra with his wife and three children.

Anthony H. Dekker earned his PhD in computer science and mathematics from the University of Tasmania (1991). Following a number of years as a lecturer in computer science at Griffith University, Brisbane, and the National University of Singapore, he joined the Defence Science and Technology Organisation in Canberra (Australia), where his interests include agent-based simulation, Network Centric Warfare, network theory and organizational issues. He is a member of the ACM and a senior member of the IEEE.

Edward Lewis is a senior lecturer at the University of New South Wales ADFA campus (Australia). Professionally trained as a behavioral scientist, with a PhD in psychology, Lewis served for 12 years with the Australian Army before joining the UNSW in 1988. Since then, he has carried out more than 30 consultancies for public-sector agencies and private firms, involving strategic planning, large-scale ICT procurement, performance measurement and policy development. He has built several planning tools, such as Risk-Remedy, that have been used in evaluating many tenders and in preparing business cases. Currently, he chairs the committee for Standards Australia that is producing a series of standards concerning the corporate governance of ICT. He is also investigating better tools for crucial decision-making.

Amelia Masters completed her bachelor’s degree in information and communication technology (Honours) at the University of Wollongong (Australia), writing her thesis on current development states for human-centric applications of RFID. She has been employed in both public and private sectors in research and design roles and currently works as a software engineer in the automation and control systems industry sector, specializing in surveillance technologies. Masters is currently completing a bachelor’s degree in law.
Katina Michael is a lecturer in information technology at the University of Wollongong, Australia. In 1996, she completed her Bachelor of Information Technology with a cooperative scholarship from the University of Technology, Sydney (UTS). In 2003, she was awarded her PhD of philosophy with the thesis “The Auto-ID Trajectory” from the University of Wollongong. She has an industrial background in telecommunications and has held positions as a systems analyst with United Technologies and Andersen Consulting. Most of her work experience was acquired as a senior network and business planner with Nortel Networks (1996-2001).

Ruhul Sarker earned his PhD in 1991 from DalTech, Dalhousie University, Halifax, Canada, and is currently a senior lecturer in operations research at the School of Information Technology and Electrical Engineering, University of New South Wales, Australia. Before joining UNSW in February 1998, Sarker worked with Monash University, Victoria, and the Bangladesh University of Engineering and Technology, Dhaka. His main research interests are evolutionary optimization, data mining and applied operations research. He has recently edited four books, and has published more than 80 refereed papers in international journals and conference proceedings. He is the editor of ASOR Bulletin, the national publication of the Australian Society for Operations Research. Sarker is actively involved with a number of national and international conferences and workshop organizations in the capacity of chair/co-chair or program committee member. He was also involved with a number of proceedings editorships. He has recently been selected as a general vice-chair and technical co-chair for IEEE World Congress on Evolutionary Computation 2003. He is a member of a task force for promoting evolutionary multi-objective optimization operated by the IEEE Neural Network Society.

Johnson Thomas earned his BSc from the University of Wales, UK, an MSc from the University of Edinburgh, Scotland, and a PhD from the University of Reading, UK. He has worked as a lecturer at the University of Reading and as an associate professor at Pace University, New York. He is currently an assistant professor of computer science at Oklahoma State University, USA. His primary research interest is in computer security, including network and sensor security. He is also interested in geographical information systems (GIS).
Ang Yang earned his first bachelor’s degree in biology in 1989. He then received his master’s degree in information science from Massey University, New Zealand (2002), and in 2003, he started his PhD on computer science at the School of Information Technology and Electrical Engineering at the ADFA campus of the University of New South Wales, Australia. His current research interests include artificial life, complex systems, multi-agent systems and network theory. He has published two referred journal papers and three conference papers.
