About the Contributors

Hong Lin received his PhD in computer science from the University of Science and Technology of China (1997). He is currently an assistant professor of computer science at the University of Houston-Downtown and the chairperson of the Computer Science Curriculum Committee. His research interests include multi-agent systems, parallel/distributed computing, and formal methods. He has recently studied the application of the chemical reaction model in multi-agent system specification and derivation. His research results have been published in several papers in professional journals and conference proceedings.

* * *

Arshad Ali is a professor and director general at NUST Institute of Institute of Information Technology (NIIT), Pakistan, which he co-founded in 1999. He received his PhD from the University of Pittsburgh in 1992. His main research topics are multi-agent systems, Grid computing, network monitoring, and management and Semantic Grid. He is playing a key role in collaboration of NIIT with Stanford Linear Accelerator Center (SLAC), Center of European Nuclear Research (CERN) in Switzerland, University of the West of England (UWE) in the UK, and the California Institute of Technology (CalTech). He is a member of Institute of Electrical and Electronics Engineers (IEEE) and ACM.

Mary Anderson is a research assistant with the School of Information Sciences and Engineering at the University of Canberra. She has a Master of Information Technology.

Amna Basharat is a research associate in the multi-agent systems research group at NUST Institute of Information Technology (NIIT), Pakistan. She received a BS in software engineering from National University of Sciences and Technology (NUST), Pakistan (2005). Her research interests include multi-
agent systems frameworks, agent architectures, and real-world application development via synergy of agents. She is working as a key member for collaborative research work among NUST Institute of Information and Technology (NIIT), Pakistan, and Communication Technologies (Comtec), Japan.

Ana L. C. Bazzan is an adjunct professor at the University of Rio Grande do Sul (UFRGS), Brazil, in the Department of Computer Science. She has a PhD from the University of Karlsruhe, Germany, with a thesis on an evolutionary game-theoretic approach to coordination of traffic signal agents. Currently, she coordinates a project on intelligent traffic systems and is a member of the board of the International Foundation of Autonomous Agents and Multi-Agent Systems (IFAAAMAS), as well as of several program committees.

Pratik K. Biswas is currently a senior member of the technical staff at Avaya Inc. in New Jersey. Prior to this, he was a senior research faculty at the Applied Research Laboratory (ARL) of The Pennsylvania State University, where he led and managed a Defense Advanced Research Projects Agency (DARPA)-funded, multi-university (The Pennsylvania State University, Duke University, University of Wisconsin-Madison, University of California at Los Angeles, Cornell University, and Louisiana State University) research initiative (MURI) project, known as the Emergent Surveillance Plexus, on the surveillance capabilities of sensor networks. Earlier, he held senior technical/research positions at Lucent/Bell Laboratories, AT&T Bell Laboratories/AT&T, IBM, and Krupp Forschungsinstitut (Germany), among others. His current interests include autonomic systems, sensor networks, VoIP networks, artificial intelligence, intelligent agents, distributed systems, software architecture, and conceptual modeling. Dr. Biswas received his MS and PhD in computer science from Florida State University (1988 and 1991, respectively).

Liu Bo is a PhD candidate in the School of Computer Science and Engineering, Southeast University, China. Her current research interests include multi-agent technology and distributed network management.

Michael Bowman is an assistant professor of telecommunications systems management at Murray State and a retired U.S. Army colonel. He teaches graduate and undergraduate courses in telecommunications, information assurance, and computer science. During his military career, Dr. Bowman directed development, acquisition, fielding, and life-cycle management for military intelligence, surveillance and reconnaissance (ISR) architectures. Dr. Bowman earned a PhD in 2002 from George Mason University with study and research for the Defense Advanced Research Projects Agency investigating advanced methods in artificial intelligence, knowledge engineering, and intelligent agents for real-world, complex problem solving in the military domain. Dr. Bowman is a member of ITERA, IEEE, ACM, AAAI, and AFCEA.

Hyung Rim Choi is a professor of management information systems at Dong-A University, Korea. He received his BBA from Seoul National University and an MS and PhD in management science from the Korea Advanced Institute of Science and Technology. His major research interests include artificial intelligence (AI) for electronic commerce, automation of process planning, and scheduling in manu-
facturing systems. Currently, he is interested in the research area of port and logistics systems. He is a member of the American Association for Artificial Intelligence.

Andre de Korvin received a PhD in mathematics from the University of California Los Angeles (1967). He is currently a professor with the Department of Computer and Mathematical Sciences and assistant chair for research at the University of Houston – Downtown. His research interests include fuzzy logic, neuro-fuzzy systems, stochastic processes, business applications, the mathematical theory of evidence, and measure and integration theory. He has published 200 refereed papers and received grants from NASA, National Science Foundation (NSF), and the Army. He is the owner of the Excellence in Scholarship Award (1999), the Enron Excellence in Teaching Award (1993), the Excellence in Scholarship Award (1992), and the Excellence in Professional Service Award (1990) at the University of Houston – Downtown.

H. Farooq Ahmad is a specialist engineer in communication technologies (Comtec), Sendai, Japan, with joint appointment as an associate professor at NUST Institute of Information Technology (NIIT), Pakistan. He received a PhD from the Tokyo Institute Technology, Japan, in 2002. His main research domains are autonomous decentralized systems, multi-agent systems, autonomous Semantic Grid, and Semantic Web. He has played an instrumental role in developing collaborative research linkage between NIIT, Pakistan, and Comtec, Japan. He is a member of IEEE.

Gordon Fraser received a master’s degree in computer engineering (Telematik) in 2003 from Graz University of Technology. He joined the robotic community as member of the university’s RoboCup team, focusing on automated planning. Currently, he is a PhD student at the Institute for Software Technology at Graz University of Technology, working on software test automation.

Yang Gao is an associate professor in the Department of Computer Science at Nanjing University, China. He received a master’s degree from Nanjing University of Science and Technology (1996) and a PhD in computer science from Nanjing University (2000). His current research interests include agent and machine learning.

Jorge Marx Gómez studied computer engineering and industrial engineering at the University of Applied Science of Berlin (Technische Fachhochschule). He was a lecturer and researcher at the Otto-von-Guericke-Universität Magdeburg, where he also obtained a PhD in business information systems with the work “Computer-based Approaches to Forecast Returns of Scrapped Products to Recycling.” In 2004, he received his habilitation for the work “Automated Environmental Reporting through Material Flow Networks” at the Otto-von-Guericke-Universität Magdeburg. From 2002-2003, he was a visiting professor for business informatics at the Technical University of Clausthal. In 2004, he became a full professor of business information systems at the Carl von Ossietzky University, Oldenburg. His research interests include business information systems, e-commerce, material flow management systems, federated ERP-systems, data warehousing, recycling program planning, disassembly planning and control, simulation, and neuro-fuzzy-systems.
**Hiromitsu Hattori** received a BE, ME, and doctor of engineering from Nagoya Institute of Technology (1999, 2001, and 2004, respectively). He has been a research fellow of the Japan Society for the Promotion of Science (JSPS) since 2004. From 2004-2005, he was a visiting researcher at University of Liverpool. Since 2006, he has been a visiting researcher at Massachusetts Institute of Technology. His main research interests include multi-agent systems, agent argumentation, agent-mediated electronic commerce, and intelligent group decision support.

**Luo Junzhou** is a professor and dean of the School of Computer Science and Engineering, Southeast University. As a principal investigator, he completed 20 national and provincial projects in the past 18 years. He published more than 270 journal and conference papers on computer networking. His research interests are protocol engineering, network management, network security, and grid computing.

**Iwan Kartiko** works as a research fellow at the Department of Computing, Macquarie University. His work focuses on digital content creation for games and virtual reality applications. His interest is particularly in 2D illustration and 3D modeling. He graduated from University of New South Wales in 2001 with a degree in mechatronics engineering. His interest in 3D design and modeling outweigh his interest in artificial intelligence. Kartiko is also working as a freelance illustrator for an international company.

**Manolya Kavakli** earned a BSc (1987), MSc (1990), and PhD (1995) from Istanbul Technical University. She worked as an associate professor in design science at Istanbul Technical University until 1999. In 1996, Dr. Kavakli was awarded a NATO Science Fellowship in the UK. In 1998, she received a postdoctoral fellowship from the University of Sydney, Australia. Dr. Kavakli worked as the course coordinator of the first computer science (games technology) degree in Australia until 2003 at the School of Information Technology, Charles Stuart University. She has been working as a senior lecturer in computer graphics at the Department of Computing, Macquarie University since 2003. Dr. Kavakli established a virtual reality (VR) lab for fostering graphics research in 2003 and brought researchers together as a multidisciplinary and international research team with the establishment of VISOR (visualisation, interaction and simulation of reality) research group.

**Hyun Soo Kim** is a professor of management information systems at the Dong-A University in Korea. He received his BBS from Seoul National University, and an MS and PhD in management science from the Korea Advanced Institute of Science and Technology. His current research interests lie in agent-mediated commerce and collaboration in supply chain and virtual market.

**Shuangzhe Liu** is a senior lecturer at the University of Canberra. He holds a PhD in econometrics from the University of Amsterdam/Tinbergen Institute, The Netherlands, and has previously worked at Northeastern University, University of Amsterdam, University of Basel, and Australian National University. He has published a number of papers in top mathematical and statistical journals and book chapters contributed to books and proceedings. He has also authored a monograph and jointly edited proceedings for an international statistics workshop. Currently, he conducts research on some issues in multivariate statistics and data mining with applications to financial, medical, and other areas.
About the Contributors

**Fabiana Lorenzi** is a PhD student at the Federal University of Rio Grande do Sul (UFRGS), and she teaches at the Lutheran University of Brazil (ULBRA). Her current research interests include multi-agent recommender systems, case-based reasoning, swarm intelligence, and knowledge management.

**Daniel Lübke** achieved his diploma degree in business informatics at the TU Clausthal in 2004. He worked in software development and coaching. Currently, he is a research assistant at the software engineering group at the Leibniz University Hannover. Areas of interest include modern approaches for distributed applications like mobile agents and Web service technologies and the software engineering paradigms behind them.

**Wanli Ma** is a lecturer in the School of Information Sciences and Engineering, University of Canberra. His research interests include computer security (intrusion detection, biometrics, and computer forensics) and multi-agent system (system structure, applications, and agent-based software engineering). Ma also has six years of first-hand experience in running information technology (IT) infrastructure and IT security operations.

**Paulo Marques** (pmarques@dei.uc.pt) is a researcher at the Center for Informatics and Systems of the University of Coimbra and an assistant professor at its Department of Informatics Engineering. He holds a PhD in informatics engineering from the same university earned in 2003. His main research interests are distributed systems, software reliability, virtual machines, and modern programming languages. He was the main developer of the M&M mobile agent framework. More recently, he has lead the RAIL and RAIL2 projects on code instrumentation for virtual machines and is currently leading the LeonVM project on dynamic code translation for the LEON2 processor.

**Kevin McCarthy** is a PhD student, studying in the School of Computer Science and Informatics at University College Dublin (UCD). He graduated from University College Dublin in 2003 and holds a BSc (Hons) in computer science. McCarthy’s research is funded by the Science Foundation Ireland (SFI), and his current research focuses on the aggregation of user preferences in group recommendation scenarios. He has published more than 25 peer-reviewed papers and has received two best paper awards to date. His research interests include group collaboration, critiquing, diversity, user feedback, personalization, recommender systems, and case based reasoning.

**Lorraine McGinty** received both her BSc in computer science (1998) and her PhD (2002) from University College Dublin (UCD), and is currently a lecturer in the School of Computer Science and Informatics at UCD. Her primary research interests include adaptive retail, recommender systems, case-based reasoning, personalization, and e-commerce. She has in excess of 40 peer-reviewed scientific publications (including book chapters and papers in leading international conference and journals) and holds membership on a wide number of program committees for several international conferences and journal boards. Most recently, she served as chair of the doctoral consortium for the 2006 International Conference on Adaptive Hypermedia and Adaptive Web-Based Systems (AH 2006).

**Denise de Oliveira** is a PhD student at the University of Rio Grande do Sul (UFRGS), Brazil, in the Department of Computer Science. Her main interests are agent-based simulation, swarm intelligence, reinforcement learning, Markov decision processes, and coordination in multi-agent systems.
Tadachika Ozono received his bachelor’s degree in engineering from the Nagoya Institute of Technology, his master’s degree in engineering from Nagoya Institute of Technology, and his PhD in engineering from Nagoya Institute of Technology. He is a research associate of the Graduate School of Computer Science and Engineering at Nagoya Institute of Technology. His research topic is Web intelligence using multi-agent and machine learning technologies.

Raman Paranjape’s main research interests are in mobile agent-based systems for scheduling and modeling, as well as the extraction of meaningful information from signals and images using methods of digital signal processing, computer vision, statistical analysis, and neural networks. Dr. Paranjape received a PhD in electrical engineering from the University of Alberta in 1989. He worked as post-doctoral fellow and research associate in the department of electrical and computer engineering at the University of Calgary for two years. Dr. Paranjape worked as research scientist, software engineer and project manager in Canadian industry for five years in metro Toronto. Dr. Paranjape joined the University of Regina in 1997, where he was the chair of the Electronic Systems Engineering Program between 1998-2004 and is currently professor of electronic systems engineering. Dr. Paranjape is a professional engineer and is the chair of the IEEE South Saskatchewan Section.

Byung Joo Park is a research professor of BK21 at the Dong-A University in Korea. He received his BS, MS, and PhD in industrial engineering from the Dong-A University. His major research area is application of optimization method, scheduling in manufacturing systems, logistics, and intelligent agent system.

Yong Sung Park is a professor of distribution management information systems at the Catholic University of Busan, Korea. He received his BS, MS, and PhD in management information systems from the Dong-A University. His major research areas are multi-agent systems, intelligent systems, and supply chain management. Now he is interested in the research area of ubiquitous computing and logistics systems.

John Porte is a member of the VISOR (Visualisation, Interaction and Simulation of Reality) Research Group, Department of Computing, Macquarie University. He is currently the virtual reality lab manager. His studies focused on software development, he completed a diploma in systems analysis and programming in 1999. He has undertaken various projects in software development (e.g., AuxTrack, audio mastering software for the Australian Caption Centre). Pursuing an interest in computer-generated graphics and interactive entertainment, he has found himself collaborating with artists, developing graphics engines with productions on the fringes of the underground graphics demo scene and the Indy games industry.

James Reilly is a PhD student in the School of Computer Science and Informatics at the University College Dublin. He graduated with a BSc (Hons) in computer science from the University College Dublin in 2003. Reilly works as part of the adaptive information cluster research group, which is funded by SFI. His research interests include recommender systems, user modeling, case-based reasoning, personalization, and e-commerce. James has published more than 20 peer-reviewed papers in the area of critiquing and conversational recommender systems. He has received best paper awards at
the International Conference on Adaptive Hypermedia and Adaptive Web-Based Systems (AH) and a
distinguished paper at the SGAI International Conference on Innovative Techniques and Applications
of Artificial Intelligence.

Maria Salamó held a postdoctoral researcher post in the School of Computer Science and Informatics
at University College Dublin (2005-2006). She is currently a lecturer in the department of matemàtica
aplicada i anàlisi and is also a member in the volume visualization and artificial intelligence research
group at the University of Barcelona. She received a PhD (2004) from Ramon Llull University, Barcelona,
Spain. Her research covers a broad set of topics within artificial intelligence, including conversational
recommendation, case-based reasoning, user modeling, and personalization techniques. She has published
more than 30 peer-reviewed papers and has received an award for her PhD project on information
and communication technologies and a best paper award.

Daniela Scherer dos Santos graduated in computer science at the University of Santa Cruz do Sul
(UNISC), Brazil. Nowadays, she is a collaborative student of the Multi-Agent Systems Laboratory at
the Computer Science Institute of the University of Rio Grande do Sul (UFRGS). Her main interests
are in swarm intelligence, self-organization, clustering, and agent-based simulation.

Dharmendra Sharma is an associate professor in computer science and head of the School of Information
Science and Engineering at the University of Canberra, Australia. His PhD is from the Australian
National University, and his research interest is mainly in artificial intelligence and applying AI technology
to real-world problems and developing computational models for complex problems. His areas of
research expertise include distributed artificial intelligence, multi-agents, data mining, fuzzy reasoning,
security, health/medical informatics, intelligent applications, and ICT applications to education. Dr
Sharma has supervised many research students and has published widely.

Toramatsu Shintani received a BE, MS, and doctor of engineering from the Science University of To-
yko (1980, 1982, and 1993, respectively). From 1982-1994, he was a research staffer at the International
Institute for Advanced Study of Social Information Science (IIAS-SIS), FUJITSU LABORATORIES
LTD. Since 1994, he has been a professor in the Department of Intelligence and Computer Science,
Nagoya Institute of Technology. From 2000-2001, he was a visiting professor at the Robotics Institute at
Carnegie Mellon University (CMU). His research interests include logic programming, decision support
systems, multi-agent systems, and intelligent Web systems.

Luís Silva (luis@dei.uc.pt) is a researcher at the Center for Informatics and Systems of the University
of Coimbra and an associate professor at its Department of Informatics Engineering. He holds a PhD
in informatics engineering from the same university received in 1997. Over the years, he has published
more than 80 scientific papers at international conferences and journals, as well as led several major
research projects in distributed systems and software reliability. His main research interests are de-
pendable computing, in particular software aging and rejuvenation, autonomic computing, reliable Web
services, as well as distributed systems and desktop grid computing. He is currently responsible for the
reliability package of the European Network of Excellence “Core Grid.”
Plamen Simeonov received an MS in mathematics from Sofia State University, Bulgaria (1992) and a PhD in mathematics from the University of South Florida (1997). His research interests are in the areas of analysis, approximation theory, orthogonal polynomials, special functions, and, most recently, fuzzy logic and its applications. Dr. Simeonov is an associate professor of mathematics at the University of Houston-Downtown.

Barry Smyth received a BSc in computer science from University College Dublin in 1991 and a PhD from Trinity College Dublin in 1996. He is an ECCAI fellow and is currently the head of the School of Computer Science at University College Dublin, where he holds the digital chair in computer science. His research interests include artificial intelligence, case-based reasoning, information retrieval, and user profiling and personalization. He has published more than 200 scientific articles in journals and conferences and has received a number of international awards for his research.

Gerald Steinbauer received an MSc in computer engineering (Telematik) in 2001 from Graz University of Technology. He is currently a researcher at the Institute for Software Technology at the Graz University of Technology and works on his PhD thesis focused on intelligent robust control of autonomous mobile robots. His research interests include autonomous mobile robots, sensor fusion, world modeling, robust robot control and RoboCup. He built up the RoboCup Middle-Size League team of Graz University of Technology and works as its project leader. He is a member of the IEEE Robotics and Automation Society, the IEEE Computer Society, and the Austrian Society for Artificial Intelligence. Moreover, he is co-founder and member of the Austrian RoboCup National Chapter.

Hiroki Suguri is a vice president and chief technology officer at Communication Technologies in Sendai, Japan, which he co-founded in 2000. He received his PhD from Iwate Prefectural University in 2004. His main research topics are multi-agent systems, autonomous Semantic Grid, and Semantic Web. He received a certificate of appreciation from the Foundation for Intelligent Physical Agents in 2002 and an award for key role in developing research linkages between Pakistan and Japan by the Pakistan Software Export Board in 2004. He is a member of Information Processing Society of Japan (IPSJ), IEEE, and ACM.

Nicolas Szilas entered a video game studio in 1997 in order to manage the newly created research and development (R&D) program on AI for video games, after the completion of his PhD in cognitive science in 1995 (Grenoble, France), and two postdoctoral positions (in Montreal). Between 1999-2001, he was chief scientist at the Department of Innovation of a European software integration company. In parallel, he conducted his own research program on interactive drama called Idtension, and continued working on this project at the University of Paris 8, then at the Macquarie University in Sydney, before entering the University of Geneva in 2006 as an associate professor. His research areas include games, narrative, and learning.

Amina Tariq is a research associate in multi-agent systems research group at NUST Institute of Information Technology (NIIT) in Pakistan. She received a BS in software engineering from National University of Sciences and Technology in Pakistan (2005). Her research interests include multi-agent systems frameworks, agent architectures, and real-world application development via synergy of agents.
About the Contributors

She is working as key member for collaborative research work among NUST Institute of Information and Technology in Pakistan and Communication Technologies (Comtec) Japan.

Dat Tran received a BSc and MSc from University of Ho Chi Minh City, Vietnam (1984 and 1994, respectively), and a PhD in information sciences and engineering from University of Canberra (UC), Australia (2001). He is currently senior lecturer in software engineering at UC. Dr. Tran has published 70 research papers, has been awarded nine research grants, and has served as reviewer for *IEEE Transactions*, *Pattern Recognition*, and *Bioinformatics* journals. He is IEEE senior member and WSEAS board member. His biography has been included in Marquis’ Who’s Who in the World and in Sciences and Engineering.

Ben Tse is a graduate student at the University of Regina. He is majoring in electronic system engineering and convocated with great distinction. One year after his graduation, he decided to pursue a masters degree. Later, he became a student of TRLabs Regina, and obtained NSERC IPS. His research interests are mainly mobile agent technology, health information access and retrieval, and image processing. He is currently employed by Streamlogics Inc., as an application developer for Web casting and Web conferencing applications.

Hao Wang is a master’s student in the Department of Computer Science at Nanjing University, China. His current research interest is multi-agent systems and reinforcement learning.

Lizhe Wang received a BE and ME from Tsinghua University in China (1998 and 2001, respectively), and will earn his PhD from University of Karlsruhe in Germany 2007 in applied computer science. Dr. Wang worked as a research staffer in the Institute of Computing Technology, Chinese Academic of Science (2001), School of Computer Engineering, Nanyang Technological University (2001-2003), and INRIA, France (2004-2005). His research interests include parallel computing, cluster computing, and Grid computing.

Ruili Wang is a lecturer in the Institute of Information Sciences and Technology at Massey University, New Zealand. He received a PhD in computer science from Dublin City University. His research interests include mathematical modeling and artificial intelligence. He is a member of the editorial board of the *International Journal of Business Intelligence and Data Mining*. He is currently supervising several PhD students and holds several research grants.

Jörg Weber is a PhD student at the Institute for Software Technology at Graz University of Technology (Austria). His general research interests include model-based diagnosis, qualitative reasoning, robotics, and the application of AI planning to the deliberative control of autonomous robots. His current research focuses on self-healing systems and, in particular, on model-based diagnosis and repair in mobile autonomous robots. He is a member of the “Mostly Harmless” RoboCup team at his university. He received an MSc degree from the Graz University of Technology.

Li Wei is a PhD candidate in the School of Computer Science and Engineering, Southeast University, China. His current research interests include distributed network management, traffic engineering, and e-learning.
Franz Wotawa received a PhD in 1996 from Technical University of Vienna. Since 2001, he has been a professor for software engineering at the Graz University of Technology, where he heads the Institute for Software Technology. His research interests include verification, testing, debugging, and model-based reasoning. Wotawa has written more than 100 papers, has been member of several program committees, and has organized several workshops and special issues for journals in his field. He is a member of ACM, IEEE Computer Society, and AAAI.
