About the Authors

Ibrahim Kushchu is an expert on management systems and artificial intelligence. He holds a first degree (BSc) in management and an MBA. He also has a Master’s degree (MSc) in artificial intelligence from the University of Edinburgh, UK. He was awarded a PhD degree in evolutionary artificial intelligence from the University of Sussex, UK. Combining his management studies and his expertise in artificial intelligence, Prof. Kushchu has been working for business schools both in the UK and in Japan and teaching various information communication technology courses especially related to electronic business and mobile business. Prof. Kushchu is an internationally recognised and pioneering researcher in developing the mobile government field by bringing into the light the issues related to the use of mobile technologies in electronic government. He has edited and co-authored three books and has more than 35 publications in various international journals and in the proceedings of reputable conferences. He is also very active in international community of researchers through organizing, chairing, co-chairing various international conferences, and serving in the committees. He also worked with various multi-national companies including CISCO, NOKIA, and NTT DoCoMo for various educational events, research, and consultancy projects.

Yara S. Abdel Samad is currently the head of Information Technology Policy at the Ministry of Information and Telecommunication Technologies in Jordan. She is an MsC student in information technology management at the University of
Sunderland, UK. Her research area is online banking. Ms. Abdel Samad used to be the Head of Strategic Planning at the E-government Program in Jordan during the conduction of this research. Ms. Abdel Samad is a certified project management professional (PMP). She has a BSc degree in industrial engineering from the University of Jordan majoring in industrial engineering management.

Witold Abramowicz is professor of computer science at the Poznan University of Economics and chair of the Department of Management Information Systems. He has published over a hundred papers, nine books in the area of information retrieval and filtering, and several book chapters. He is a member of many program committees of conferences in the area of information processing and the chair of the Business Information Systems Conference. He has 12 years experience of teaching and research at three universities in the Switzerland and Germany. He is a principal researcher in projects carried at the Department of Management Information Systems—enhanced knowledge warehouse, D-Leap, mobileIF, eVEREst. He was also a supervisor of the enhanced Data Warehouse project, which is described in the book, Filtering the Web to Feed Data Warehouses (Springer 2002).

Ala M. Abu-Samaha, PhD, is an assistant professor of information systems in the Faculty of IT at The University of Amman. Dr. Abu-Samaha has developed research interests in two major areas of the information systems discipline: information systems development methodologies, and information systems/technology evaluation. Dr. Abu-Samaha has many publications in both of these areas, mainly in evaluating technical intervention in health provision. Dr. Abu-Samaha holds a PhD degree in information systems from the Information Systems Research Centre (ISRC) at the Information Systems Institute, University of Salford, UK. The author has obtained his MS degree in the same area of interest from the Department of Mathematics and Computer Science, University of Salford.

Carl Adams is currently a principal lecturer and researcher in the Department of Information Systems and Computer Applications, University of Portsmouth, UK. His professional experience spans 12 years working in the computer industry as a software engineer, system analyst, and consultant before going into academia. His research interests include mobile information systems development, m/e-commerce, mobile/electronic payment systems, and the effect of technology on people and organisations. He has a PhD from Southampton University covering information systems development.

Bill Anckar is the CEO of the hotel chain Omena Hotels Ltd and an associate research fellow at the Institute for Advanced Management Systems Research (IAMSR) at the
Abo Akademi University, Turku, Finland. His research focuses on consumer adoption of electronic and mobile commerce, in particular applications and services relating to travel and tourism. His work has appeared in several books and international journals, as well as in proceedings of numerous international conferences.

**Seda Arat** has been involved in business-to-business (B2B) e-commerce for the last eight years. After spending three years at an Internet start-up as the business development coordinator and marketing manager in late ‘90s in Beijing, China, she was instrumental in setting up the first e-B2B applications in Turkey which included e-marketplaces for plastics and chemicals (www.chemorbis.com) and steel (www.steelorbis.com) industries where she was in charge of product and business development. Ms. Arat researched and prepared papers on mobile technologies, m-commerce, and m-government during her MBA studies in Japan. Currently, she’s working in Shanghai, China as the chief representative—Greater China for ChemOrbis and SteelOrbis. She holds a BS and MS in international relations from Middle East Technical University, Ankara, Turkey, and an MBA from the International University of Japan, Niigata, Japan.

**Norm Archer** is a professor emeritus in the DeGroote School of Business, McMaster University, Canada. He is also a special advisor to MeRC (McMaster eBusiness Center), and he plays a key role in ORNEC (Ontario Research Network in Electronic Commerce), a consortium of four Ontario universities. In his research, he is active, along with his graduate students and colleagues, in the study of organizational problems relating to the implementation of e-business approaches in business, health, and government organizations, and the resulting impacts on processes, employees, customers, and suppliers. He has published over 70 refereed journal and conference papers.

**Andrzej Bassara** is a research assistant and PhD student at the Poznan University of Economics, Department of Management Information Systems. His current research covers ontologies for information systems, personalisation, and data warehousing. He is the member of the eVEREst (enhanced Value Estimation of Real Estates) project team and organizing committee of the annual BIS Conference. His experience as a project manager and a software developer is documented in a number of publications and solutions for SME.

**Chet Borucki** is a professor of strategy and management at the Temple University, Japan. Previously, he was a professor of management at the International University of Japan, a position he has held since September, 2003. He received his PhD in 1989 from the University of Michigan Business School and also holds Master’s degrees
in organizational psychology (University of Michigan) and business administration (University of Massachusetts) and an undergraduate degree in psychology (University of Massachusetts). He has previously held academic positions at Seoul National University, Nyenrode University (The Netherlands Business School), and New York University. In addition to his academic appointment at IUJ, he is also a consultant, speaker, writer, and facilitator who specializes in organizational analysis, strategy formulation, and change management. A recent stream of research in which he has been engaged with his colleague Ibrahim Kushchu, is advancing the field of mobile government through studies of recent trends, developments, strategies, practices, and future directions.

**Eugenio Capra** graduated in electronics engineering at Politecnico di Milano in 2003. He worked as business analyst in McKinsey & Co. from 2004 to 2005. He currently studies for a PhD in information engineering at the Politecnico di Milano and works as a researcher for Fondazione Politecnico di Milano. His main research interests are open source software costs, impact of IT on banking, e-government, and m-government. He has consulted in the financial industry in Italy.

**Bing Cheung** was born in Hong Kong in 1971. He received the BASc and MASc degrees from the University of British Columbia, Vancouver BC, Canada, both in electrical engineering in 1994 and 1997, respectively. After working for Nortel Networks at Ottawa ON for more than four years as a systems engineer, he pursued and obtained the MBA degree from University of Ottawa, majored in finance, in 2002. He is currently employed at the Public Works and Government Services Canada at Gatineau QC as a telecommunications engineer. His expertises include radio mobile communications and technical business case analysis.

**Eleni Christodoulou** is the director of the Advanced Research and Development Laboratory of the University of Cyprus focusing on advanced technologies in the areas of e-health. She gained a PhD in medical informatics, and she has over 18 years working experience in the information technology business and academia sector both in Germany and Cyprus. In the last eight years, she has served as a director in the information technology industry. She has been involved as a project coordinator in a number of internationally-funded projects in the e-government and e-health areas.

**Ben Coaker** has a BSc in civil engineering and a minor in building construction from Virginia Tech (2000). Mr. Coaker worked for several years as a structural engineer designing bridges. He is currently employed as a project engineer for The Whiting-
Turner Contracting Company. He earned his Master’s in business administration (MBA) degree in 2006 from the University of Richmond. Mr. Coaker currently resides in Richmond, Virginia USA.

Candace Deans is an associate professor of management in the Robins School of Business at the University of Richmond. She received her PhD degree from University of South Carolina in information technology and international business in 1989. She was previously on the faculty of Thunderbird—The Garvin School of International Management (1993-2002) and Wake Forest University (1989-1993). She has published articles and books on international issues related to information technology in organizations.

Agata Filipowska is a teaching and research assistant and PhD student at the Poznan University of Economics, Department of Management Information Systems. Her main area of interests covers e-government, data warehousing, information retrieval, and filtering. She is the chair of the organizing committee of the BIS2004 Conference and the member of the eVEREst (enhanced Value Estimation of Real Estates) project team.

Christina Fitch is a senior lecturer and researcher in the Department of Information Systems and Computer Applications, University of Portsmouth, UK, with a PhD in health informatics and telemedicine and an MSc in information systems. Her research includes social and organizational aspects of e-health information systems applications and their development and evaluation. Professional experience includes analysis, design, implementation, and evaluation of systems for, among others, the UK National Health Service (NHS). Originally from The Netherlands, she has qualifications in business and human resource management and held management positions in industry and the NHS prior to joining the university.

Carlos Flavián holds a PhD in business administration and is professor of marketing in the Faculty of Economics and Business Studies at the University of Zaragoza (Spain). His research in strategic marketing has been published in several academic journals, such as the European Journal of Marketing, the Journal of Consumer Marketing, the Journal of Strategic Marketing, Information & Management, Internet Research, Distribution and Consumer Research, the Journal of Retailing and Consumer Services, and different books such as The Current State of Business Disciplines or Building Society Through e-Commerce. He is in charge of several competitive research projects being developed on the topic of e-marketing. Contact e-mail: cflavian@unizar.es
Chiara Francalanci is an associate professor of information systems at Politecnico di Milano. She has a Master’s degree in electronic engineering from Politecnico di Milano, where she has also completed her PhD in computer science. As part of her post-doctoral studies, she has worked for two years at the Harvard Business School as a visiting researcher. She has authored articles on the economics of information technology and on feasibility analyses of IT projects, consulted in the financial industry, both in Europe and the U.S., and is a member of the editorial board of the *Journal of Information Technology*.

Panagiotis Germanakos is a PhD candidate and research associate of the Laboratory of New Technologies of the Faculty of Communication & Media Studies of the National & Kapodistrian University of Athens with research interests on Web adaptation and personalization environments and systems based on user profiling encompassing among others visual attention and cognitive psychology (mental and emotional) processes, implemented on desktop and mobile/wireless platforms. He obtained a Master’s degree in international marketing management, Bachelor’s in computer science, and HND diploma of technician engineer in the field of computer studies. He is also a research associate and teaching assistant of the Department of Computer Science of the University of Cyprus collaborating on nationally and internationally funded projects, concentrating mainly on the analysis, design, and development of open interoperable integrated wireless/mobile and personalized technological infrastructures and systems on the ICT research areas of e-government, e-health, and e-learning. Additionally, he has over five years of experience in the provision of consultancy of large-scaled IT solutions and implementations in the business sector.

Miguel Guinaliu holds a PhD in business administration and is assistant professor in the Faculty of Economics and Business Studies (University of Zaragoza, Spain). Previously, he worked as an e-business consultant. His main research line is online consumer behavior, particularly the analysis of online consumer trust, usability, and virtual communities. His work has been presented in national and international conferences, and has been published in several journals, such as *Industrial Management and Data Systems*, the *Journal of Retailing and Consumer Services*, *Information & Management*, *Internet Research*, *International Journal of Bank Marketing* or *International Journal of Retail & Distribution Management*, and books, such as *Advances in Electronic Marketing*. Contact e-mail: guinaliu@unizar.es

Anette Hallin, MEd, is a trained and experienced teacher and school manager who also has worked with risk management and business intelligence within the construction-industry. Presently, she is working on her PhD within organization theory and management at the Department of Industrial Economics and Management at The
Royal Institute of Technology (KTH) in Stockholm, Sweden. Her research interests include: organization and technology, the cooperation of private businesses and public organizations, the images and identity of organizations, city management, and place marketing. For a few years, she has acted as an independent expert for the EU-commission.

**Mehmet H. Kuscu**, a fellow of mobile government consortium, holds a BA in modern languages from the University of Portland and an MPA degree from the Monterey Institute of International Studies. His work and research focus on the international public administration and the use of mobile technology by the public management. He has published various articles and edited a book in the mobile government field.

**Kristina Lundevall**, MSc in engineering and management with degree program in radio communication systems and industrial engineering, is the project manager of mCity—a project developing mobile services in the City of Stockholm. Her theses project *mWatch – A Survey on Mobile Readiness in the Baltic Sea Region* was presented on the Fifth Annual Baltic Development Forum Summit 2003. She is also a member of the conference committee for the 5th European Conference on e-Government (ECEG 2005).

**Howie Macumber**, PEng, has over 30 years of experience in the telecommunications field, both in the private sector and in government. As director of systems engineering, he leads a group of professionals who provide engineering services to support voice and data telecommunication services used by the Government of Canada. He holds a BSc (mathematics) from Acadia University, a BEng (electrical engineering) from the Technical University of Nova Scotia, and an MSc (electrical engineering) from Queen’s University in Kingston, Ontario. He is a member of the Professional Engineers Ontario (PEO) and the Institute of Electrical and Electronic Engineers (IEEE).

**Clementina Marinoni** graduated in philosophy, specialized in logic and epistemology by the Università degli Studi Milano. Since 1991, she has worked within Politecnico di Milano as a researcher and project manager for human resources projects. Now she works in Fondazione Politecnico Milano and manages the Area for Studies and Human Resource Enhancement. She gained experience of competence-skills development, knowledge and change management, learning models and processes, and e-learning by national and transnational project. The main reference business contexts are in industrial and service sectors. She is the author of some papers published in business and scientific journals.
**Blessing M. Maumbe** has a PhD from Michigan State, USA. He has worked extensively in agribusiness and rural development in Africa. His previous research and consultancy work in the areas of higher education, rural development, and poverty alleviation has been funded by grants from the Rockefeller Foundation, the W.K. Kellogg Foundation, and the Germany Agency for Technical Cooperation (GTZ). He was the founding lecturer and coordinator of agribusiness studies at Africa University. He has also lectured at a number of colleges and universities in Africa and the United States. His research interests focuses on ICT for socio-economic development and e-service delivery.

**Paul Moore** is a graduate in economics from the University of Toronto and in computer business systems from Ryerson University also located in Toronto, Canada. He has 17 years experience in IT systems including 10 years in the Spanish Public Administration sector in many large projects in different ministries. For the last three years, he has been a project manager in European-funded research projects in the area of e-government and m-government. He served as the project manager for the Indra team in the Use-Me.Gov project. He recently changed to the Research and Innovation area at Atos Origin where he continues to lead EC-financed research projects in e-government.

**Vesper Owei** received his BS in electrical and electronic engineering from Ohio State University, USA, and a Master’s in electrical and electronic engineering and in operations research from the Georgia Institute of Technology, USA. He also holds a PhD from Georgia Tech. He has practiced as a project, design, and consulting engineer. His research work has spanned such areas as data management, data modeling, concept-based query languages, HCI, knowledge and expert systems, OLAP, information systems for disabled people, and IT for health care delivery. His current research interests include: ICT and society, mobile ICTs and developing countries, and HCIs and end-user issues.

**Margherita Pagani** is an assistant professor of management at Bocconi University (Milan) and head researcher for New Media&Tv-lab at the I-LAB Centre for Research on the Digital Economy. She is an associate editor for the *Journal of Information Science and Technology JIST* (USA). She was a visiting scholar at Sloan-MIT (Massachusetts Institute of Technology) and a visiting professor at Redlands University (California). She worked with RAI Radiotelevisione Italiana and as a member of the Workgroup “Digital Terrestrial” for the Ministry of Communications in Italy. She is the author of *La Tv nell’era digitale* (EGEA, 2000), *Multimedia and Interactive Digital TV: Managing the Opportunities Created by Digital Convergence* (IRM Press, USA, 2003) and *Wireless Technologies in a 3G-4G Mobile Environment: Exploring New Business Paradigms* (Communication Books, Korea, 2006). She has
Chiara Pasinetti works at SAS Institute S.r.l., an international company leader in business intelligence software and services, where studies the processes of analysis in the human resources field (human capital management). She has collaborated with New Media&Tv-lab at the I-LAB Centre for Research on the Digital Economy in Bocconi University, where she was graduated with a thesis on digital economy titled, *Towards New Interactive Offers in the Relationship Between Public Administration – Citizen: the T-Government phenomenon*.

Erkki Patokorpi is currently working as a researcher at the Institute for Advanced Management Systems Research (IAMSR), and as a teacher at the Department of Information Systems at the Abo Akademi University, Turku, Finland. His main research interests include human-computer interaction, the epistemology of advanced information and communication technologies, and mobile learning. He has also worked as a science studies researcher, focusing on the sociology and rhetoric of science. He received his PhD degree from the University of Oulu in 1996, majoring in the history of science and ideas.

Gertraud Peinel received her MS in business computing (applied mathematics and economy) from the University of Ulm in 1993. She joined FAW Ulm in ‘93 and worked as project manager in the Department of Business Processes and Telematics of FAW. Her fields of expertise include system architectures, Internet technologies and implementations as well as information navigation. She was working on projects in the domain of electronic trade networks, system interoperability, and integrated data and flow management in heterogeneous system environments. Since January 2003, she works for FIT where she continued the management of and work on national and EU-funded projects such as APNEE-TU, Env-e-City, and USE-ME.GOV in the domain of e-government.

Klas Roggenkamp holds a degree in electronic business design from the University of Arts and has studied political science at the Free University, both in Berlin. He has been technical advisor to the German online magazine *politik-digital.de*, designing projects for public and private organizations in the field of e-politics and e-government. For the German federal elections, he designed the internationally renowned voter-information tool (wahl-o-mat). Following several research projects focusing on IT in public services, he has joined the Berlin and Brussels-based Helios Media GmbH as head of New Media Development, where his responsibilities include the
creation of cross-media community and information services in the public affairs sector.

**Thomas Rose** is an associate professor for media informatics at RWTH Aachen. He is also head of the research group on business process management and decision support at Fraunhofer Institute for Applied Information Technology (FIT), Schloss Birlinghoven, Germany. His research interests include business process management with a focus on engineering domains and the utilization of telematic services for process engineering and optimisation. Over the past years, he has been managing several projects for industrial sponsors and publicly-funded research projects at national as well as European level. He has been project coordinator of APNEE as well as APNEE-TU and served as technical coordinator for a number of projects. APNEE-TU has recently been selected as a success story of European funded research projects by Viviane Reding (EU Commissioner for Information Society and Media).

**George Samaras** received a PhD in computer science from Rensselaer Polytechnic Institute, USA, in 1989. He is currently a professor at the University of Cyprus. He was previously at IBM Research Triangle Park, USA, and taught at the University of North Carolina at Chapel Hill (adjunct assistant professor, 1990-93). He served as the lead architect of IBM’s distributed commit architecture (1990-94) and co-authored the final publication of the architecture (IBM Book, SC31-8134-00, September 1994). He was member of IBM’s wireless division and participated in the design/architecture of IBM’s WebExpress, a wireless Web-browsing system. He co-authored a book (1997) on data management for mobile computing (Kluwer A.P). He has a number of patents relating to transaction processing technology and numerous technical conference and journal publications. His work on utilizing mobile agents for Web database access has received the best paper award of the 1999 IEEE International Conference on Data Engineering (ICDE’99). He has served as proposal evaluator at a national and international level, and he is regularly invited by the European Commission to serve as project evaluator and auditor in areas related to mobile computing and mobile agents. He has been the general and program chair of conferences and workshops related to mobile databases and computing such as the 6th International Conference in Mobile Data Management (MDM2005). He also served on IBM’s internal international standards committees for issues related to distributed transaction processing (OSI/TP, XOPEN, OMG). His research interest includes mobile computing, mobile agents, transaction processing, commit protocols and resource recovery, and real-time systems. He is a voting member of the ACM and IEEE Computer Society.
Anna Sell is a PhD candidate at the Turku Centre for Computer Science (TUCS) and a researcher at the Institute for Advanced Management Systems Research (IAMSR) at Abo Akademi University, Turku, Finland. In 2001, she graduated with a MSc (BA) in information systems from the Department of Information Systems at the Abo Akademi University, where she was also working as an assistant teacher in the field of electronic commerce. She is currently working on her dissertation research, focusing on mobile personal calendar systems usage and user needs. Her main research interests include electronic and mobile commerce, personal information management, and time management applications.

Dirk Tilsner graduated in 1995 by the University of Rostock in electrical engineering and telecommunications. He worked for three years as project engineer in a reputed R&D institution in Portugal (UNINOVA-CRI – Centre for Intelligent Robotics), where he participated in European research projects in the area of pattern recognition, neural networks, signal processing, and fuzzy control. He later joined the Portuguese software house Skysoft where he worked for another two years as project manager participating in European research projects in aeronautics and air traffic management. At the beginning of 2000, he assumed a new position at Geograf as technical manager of the software development department. After acquisition of this company by EDISOFT, he integrated in 2003 the recently created business unit “Ground Segment Communications”.

Luis Vicente Casaló is doctoral candidate at the University of Zaragoza (Spain). His main research line is focused in the analysis of online consumer behaviour in the context of virtual communities. His work has been presented in national and international conferences such as the European Marketing Academy Conference or the International Conference on Public and Non Profit Marketing. Contact e-mail: lcasalo@unizar.es

Nico Voutsis was a graduate engineer in computer science at Swiss Federal Institute of Technology in Zurich. From 1989-1993, he was a software engineer with a Swiss commercial bank responsible for the implementation of online and batch applications. From 1993-1997, he was a software architect with the Swiss national airline responsible for re-architecting the systems for the airline’s revenue management. From 1997-2000, he was a system/software engineering consultant and system architect with a Swiss consulting company, responsible for various projects in different industries. Since 2000, he has been a solution architect with HP Switzerland responsible for various projects in different industries and a focus on e-services in the banking and telecom sectors.
**Pirkko Walden** is a professor of information systems at the Department of Information Systems, a research director of the Institute for Advanced Management Systems Research (IAMSR), and the leader of the Mobile Commerce Laboratory at the Abo Akademi University, Turku Finland. Dr. Walden has published more than 60 articles in international journals and conference proceedings. Her main research interests include knowledge-based support systems, electronic and mobile commerce. She is the area editor for the *Journal of Decision Systems*.

**Marek Wisniewski** is a research assistant and a PhD student at the Poznan University of Economics. He is involved in both European-funded and department projects. His experience and interests cover information systems design, project management, knowledge representation, semantic Web technologies, especially ontology learning methods and evaluation strategies. He is continuously involved in the organisation of BIS conference series. His experience derived from the research is well documented in a number of publications.

**Mete Yildiz** is a lecturer at the Political Science and Public Administration Department of Hacettepe University in Turkey. He worked as an associate instructor (2001-2003) and a visiting lecturer (2003-2004) at the School of Public and Environmental Affairs at Indiana University, Bloomington. His research focuses on government reform, with special emphasis on technology use (e-government and m-government), public policy, and digital divide (especially the potential role of Internet cafes and mobile phones in bridging it). He is the co-founder (with Jon Gant) and was the organizer of the E-government Workshop at Indiana University (2001-2003). During his stay at Indiana University, he attended the NSF-funded WebShop at the University of Maryland (Summer 2002), and worked as the managing editor of *The Information Society Journal* (2001-2002). He holds a Master’s degree in public administration from University of Southern California in Los Angeles, USA, and a PhD in public affairs from Indiana University-Bloomington.

**Betty Yu** is now working in The Chinese University of Hong Kong and has work experience in the Government of Hong Kong, China. She graduated from the E-Business Management Program at International University of Japan. She was a business solutions consultant at the mGovLab, the first research group on mobile government and has actively contributes to various mobile government projects including development of mGov country cases, applications modelling, and implications of mGov for development.

**Pawel Zebrowski** is a research assistant and PhD student at the Department of MIS. He is a member of mobileIF team that undertook research in the field of mobile
information filtering. Therefore, he has delved into areas of information retrieval and filtering, context awareness, mobility, ontologies, semantic Web, and Web services. During his studies, he has participated in several successful projects carried out at the department. He was a member of the organizing committee of Business Information Systems 1998, 1999, and 2000 Conferences.

**Frank Zimmerman** holds Master’s degrees in physics and in economics (MBA), and a PhD in natural sciences from Technical University of Aachen/Germany and Research Center in Jülich/Germany. From 1994-1996, he was with a Japanese Technology firm, worked on a project on parallel computing in Ticino/Switzerland, and did the set up of NEC’s European High Performance Technology Centre in Stuttgart/Germany. Since 1996, he has been with Hewlett-Packard Consulting & Integration. After several years as senior consultant and manager with HP Switzerland, he is currently the senior manager accountable for several larger projects in the public sector and financial services industry in Europe, the Middle East, and Africa. Besides several research articles in the areas of theoretical physics and high performance computing, he has various publications and presentations on topics like pseudo random numbers, e-services, security, smart cards, e-voting, e-banking, E-insurance, and e-government.
