About the Authors

Kate A. Smith is Deputy Head and Director of Research in the School of Business Systems at Monash University, Australia. She holds a B.S. (Hons) in Mathematics and a Ph.D. in Electrical Engineering, both from the University of Melbourne, Australia. She is also Director of the Data Mining Research Group in the Faculty of Information Technology at Monash University. Dr. Smith has published 2 books on neural networks in business and over 70 journal and international conference papers in the areas of neural networks, combinatorial optimization, and data mining. She is a member of the organizing committee for several international data mining and neural network conferences and regularly acts as a consultant to industry in these areas.

Jatinder N. D. Gupta is currently Professor of Management, Information, and Communication Sciences, and Industry and Technology at the Ball State University, Muncie, Indiana. He holds a Ph.D. in Industrial Engineering (with specialization in Production Management and Information Systems) from Texas Tech University. Coauthor of a textbook in Operations Research, Dr. Gupta serves on the editorial boards of several national and international journals. Recipient of the Outstanding Faculty and Outstanding Researcher awards from Ball State University, he has published numerous papers in leading academic journals. More recently, he served as a co-editor of a special issue on neural networks in business of computers and operations research. His current research interests include information and decision technologies, scheduling, planning and control, organizational learning and effectiveness, systems education, and knowledge management.

Anurag Agarwal is a faculty member in the Department of Decision and Information Sciences at the University of Florida. His Ph.D. is from Ohio State University. His research interests include the use of neural networks in optimization and classification. Dr. Agarwal has published neural networks-related papers in European Journal of Operational Research, Intelligent Systems in Accounting, Finance and Management, Information Technology and Management, Journal of Business, Finance, and Accounting and Journal

of Applied Business. Dr. Agarwal’s teaching interests include knowledge-based systems, database systems, system analysis and design and web programming.

Nagraj Raju Balakrishnan is a Professor of Management at Clemson University where he teaches courses in Management Science, Business Statistics, and Operations Management. He holds Bachelor’s and Master’s degrees in Mechanical Engineering from the University of Madras (India) and the University of Kentucky, respectively, and a Ph.D. in Management from Purdue University. His current research focuses on job and tool scheduling, capacity allocation models, and problems related to the interface between manufacturing and marketing. His articles have been published in leading academic journals such as Decision Sciences, Production and Operations Management, European Journal of Operational Research, IIE Transactions, Networks, and Computers & Operations Research, and he serves on the editorial boards of Production and Operations Management and Computers & Operations Research. He has won several awards for teaching excellence, both at Clemson and at Tulane. He is very active in writing proposals and has authored or co-authored successful grant proposals totaling over $500,000.

Indranil Bose is an Assistant Professor in the Department of Decision and Information Sciences at the University of Florida. His degrees include B.Tech (Electrical Engineering) from the Indian Institute of Technology, M.S. (Electrical and Computer Engineering) from the University of Iowa, and M.S. (Industrial Engineering) and Ph.D. (Management Information Systems) from Purdue University. His research interests are in the areas of data mining, telecommunications, and applied operations research. His publications have appeared in Computers and Operations Research, Decision Support Systems, Journal of Information and Management, and Ergonomics. He teaches database management, data mining, and systems analysis and design.

Malcolm Brooks is Manager of Research and Development at Australian Associated Motor Insurers (AAMI), a member of the Royal and SunAlliance insurance group.

Margarida G. M. S. Cardoso is Assistant Professor at ISCTE-Instituto Superior de Ciências do Trabalho e da Empresa, Lisbon (Portugal). She holds a five-year degree in Mathematics (Statistics, Operations Research and Computation) from the Faculty of Sciences of the University of Lisbon. She has a Master’s degree in Operations Research and Systems Engineering, and holds a Ph.D. in Systems
Engineering both from the Technical University of Lisbon. Her research domains include Multivariate Statistical Methods and Machine Learning Methods in Knowledge Discovery and Data Mining. Marketing is a preferred area for applications. Email: margarida.cardoso@iscte.pt.

**Stephane Cheung** received her degree in Business Information Systems from the Marshall School of Business, University of Southern California. She has worked on various data mining projects both in Japan and in the U.S.

**James O. Fiet** is a Professor of Entrepreneurship at the University of Louisville. His research investigates the relationship between entrepreneurial competence and discovery, the role of luck in venture start-up, the founding of high potential new businesses, the marshalling of resources by entrepreneurs, including particularly venture capital, and the theoretical and pedagogical foundations of entrepreneurship. For 1999, he was one of two national finalists for USASBE’s outstanding pedagogical innovation award. He received a B.A. in English from Brigham Young University, an M.B.A. in Entrepreneurship and Enterprise Development from the University of Southern California, and a Ph.D. in Entrepreneurship and Strategy from Texas A&M University. Prior to returning to academia, he founded several businesses.

**Yukinobu Hamuro** is currently an Assistant Professor in the faculty of Business Administration, Osaka Sangyo University, Osaka, Japan. His research interests include data mining in business, high performance computing in large text databases, and decision support systems. He received an M.A. degree from Kobe University of Commerce, Kobe, Japan, in 1991.

**Edward Ip** is Assistant Professor of Information and Operations Management, Marshall School of Business, University of Southern California. He received his Ph.D. in statistics from Stanford University. His research areas include psychometrics, dependency analysis in large-scale educational and business databases, and data mining. He teaches data warehousing and data mining courses at both the undergraduate and the graduate levels. Prior to joining USC, Dr. Ip worked as associate research scientist in the Large-Scale Assessment Group at the Educational Testing Service, Princeton.

**John D. Johnson** received his Ph.D. in Economics from Texas A&M University in 1987. Since joining the faculty at the University of Mississippi, he has worked in non-linear estimation, focusing on the genetic algorithm for optimization of neural networks for flexible form approximation, intelligent agents,
Internet commerce, web to database connectivity, data mining, data warehousing, and the Internet and parallel processing. He also serves as the editor of the quarterly *Journal of Electronic Commerce* and *Advances in Artificial Intelligence in Economics, Finance, and Management*. He is an Associate Professor of Management Information Systems and a senior research associate at the Robert M. Hearin Center for Enterprise Sciences. In addition, Dr. Johnson serves as Chief Technical Officer and a founder of FNC, Inc.; he has designed and directed the architecture and system integration of FNC’s innovative products. John also serves as Chief Technical Officer of AIRD, Inc.

**Joseph Johnson** is Assistant Professor of Marketing at the University of Miami, Coral Gables. He received his Ph.D. in Business Administration from the University of Southern California. His primary research interest lies in modeling consumer behavior and detecting the consequences of their choice behavior from aggregated data. He is also interested in data mining techniques to derive useful strategic and tactical information from consumer databases. Professor Johnson has over ten years of hands-on management experience in the area of marketing and operations. He has worked in several industries like automobiles, banking, petroleum, and steel.

**Naoki Katoh** received the B.Eng., M.Eng., and Dr. Eng. degrees in Applied Mathematics and Physics from Kyoto University in 1973, 1975, and 1981, respectively. He was an Assistant Professor during 1981-1982, an Associate Professor during 1982-1990, and a Professor during 1990-1997, respectively, at the Department of Management Science of Kobe University of Commerce. In 1997 he joined Kyoto University, where he is currently a Professor in the Department of Architecture and Architectural Systems. His research interests include the design and analysis of combinatorial and geometric algorithms, data mining, and architectural information systems.

**Uzay Kaymak** received his M.Sc. degree (ir.) in Electrical Engineering in 1992 from Delft University of Technology in the Netherlands. Afterwards, he received the Degree of Chartered Designer in Information Technology and his Ph.D. degree in 1995 and 1998, respectively, also from Delft University of Technology. He worked between 1997 and 2000 for Shell International Exploration and Production. Currently, he is an Assistant Professor at Erasmus University Rotterdam, The Netherlands. His research interests include intelligent agents and computational intelligence for marketing and finance. Dr. Kaymak is a member of the IEEE, of Erasmus Research Institute for Management, and an associate member of the Dutch School for Information and Knowledge Systems.
Fred L. Kitchens is currently Assistant Professor of Management at Ball State University in Muncie, Indiana. He holds a Ph.D. from the University of Mississippi in Management Information Systems with a specialization in Computational Intelligence. He has extensive experience working in the insurance industry, including agency operations, casualty underwriting, and brokering at Lloyd’s of London, in London, England. It was during his time as a casualty underwriter that he became interested in the application of technology to the underwriting process. Dr. Kitchens’ recent research has involved the application of artificial intelligence to underwriting and claims analysis, using data from a large international insurance company. Additional research areas include neural networks, knowledge management, communications, and social perceptions of technology.

Cornelius Muchineuta obtained a Bachelors degree in Commerce with majors in Accounting and Management from the University of South Africa in 1998. After graduation, he worked for Hunyani Holdings Limited, a paper and packaging company in Harare, where he held several positions in Accounting and Project Management. During this period, Cornelius attended and successfully completed a Management Development Program at Henley Management College, UK, and graduated with a Certificate in Management. Cornelius is currently studying for a Master’s Degree in Business Administration at East Carolina University, North Carolina, U.S.A. His professional interests are in international finance and accounting.

Paul Lajbcygier is Senior Lecturer at the School of Business Systems, Monash University, Australia. He holds a B.Sc., M.Fin., and a Ph.D. in the area of computational finance. He has published extensively, with over 30 papers in the application of technology to finance and has worked at the London Business School and Stern School of Business, New York University. He consults with various funds managers, banks, and hedge funds.
Larisa Lokmic is an IT analyst currently working with Telstra, an Australian telecommunications company. She holds a Bachelor of Business Systems (Honours) degree from Monash University. Her research thesis focused on the application of neural networks and data mining to a cash flow forecasting problem for a leading financial institution.

Wim Pijls graduated in Pure Mathematics at the University of Amsterdam in 1972. He received his Ph.D. from Erasmus University Rotterdam in 1991 for a thesis in the field of Operations Research. Since 1984, he has been an Assistant Professor at that university. Between 1990 and 1998, he (co-)authored various papers on search and game trees, published amongst others at IJCAI-95 and in the *Artificial Intelligence Journal*. Since 1998 he has been working in data mining. His current research interests are association rules, classification, and target selection. He is a member of Erasmus Research Institute for Management (ERIM) and a staff member of the Dutch School for Information and Knowledge Systems (SIKS).

Fernando Moura-Pires is Associated Professor in the Computer Science Department of Évora University (Portugal). He holds a five-year degree in Electrical Engineering at Angola University and a Ph.D. in Computer Science from New University of Lisbon, Portugal. His research interest lies in Machine Learning, in particular neural networks, decision trees and others classifiers and their application to data mining. He published five papers in journals and more than 50 international conference papers.

Rob Potharst received his M.Sc. degree in Mathematical Statistics in 1971 from the University of Amsterdam. He taught mathematics, statistics and computer science at various schools and universities. Since 1995 he has been active in research on the border between statistics and artificial intelligence. In 1999 he finished a Ph.D. project with a thesis about classification using decision trees and neural networks. Currently, he is Assistant Professor at Erasmus University. Dr. Potharst is a fellow of the Erasmus Research Institute for Management and an associate member of the Dutch School for Information and Knowledge Systems.

Min Qi is currently an Assistant Professor of Economics at Kent State University. She obtained her Ph.D. from Ohio State University. Her research interests are applied econometrics, financial econometrics, computational methods, forecasting, and neural networks. Her work has appeared in *Journal of Business & Economic Statistics*, *IEEE Transactions on Neural Networks*, *International Journal of Forecasting*, *Journal of Forecasting*, *European Journal of Operational
Linda Salchenberger is a Professor of Information Systems at Loyola University Chicago. Her primary research interests are in the area of decision support systems and business applications of artificial intelligence, including expert systems and neural networks. Her degrees include an M. S. in Mathematics from IIT, an M.M. from Northwestern University, and a Ph.D. in Decision Sciences from Northwestern University. Dr. Salchenberger has numerous publications and been invited to make presentations at many national and local conferences. She has done consulting in the areas of information systems development, business intelligence, and wireless communications and served as visiting scholar in applied artificial intelligence. She is the founding Director of the MSISM (Master of Science in Information Systems) Program at Loyola, Director of the newly established Center for Information Management and Technology, has served as Associate Vice President for Academic Affairs since 1998. She was honored as the School of Business Faculty Member of the Year in 1997.

Caron H. St. John is a Professor of Management at Clemson University where she teaches courses in Strategic Management, Operations Strategy, and Technology/Innovation Management. Her research interests include strategies and behavior of high technology firms in industry clusters and operations strategies within manufacturing firms. She has published articles in Academy of Management Review, Strategic Management Journal, Journal of Operations Management, Production and Operations Management, and Organizational Research Methods, among others, and received over $325,000 in funding for research and educational initiatives. She has received awards for teaching excellence and scholarship at both Clemson University and Georgia State University. She has a B.S. in Chemistry from Ga. Tech and an M.B.A. and a Ph.D. in Management from Georgia State University. Before pursuing a graduate degree, she was a product and process development chemist for Celanese Corporation.

Chew Lim Tan is an Associate Professor in the Department of Computer Science, School of Computing, National University of Singapore. His research interests are expert systems, neural networks, computer vision, and natural language processing. He obtained a B.Sc. (Hons) degree in Physics in 1971 from the University of Singapore, an M.Sc. degree in Radiation Studies in 1973 from the University of Surrey in U.K., and a Ph.D. degree in Computer Science in 1986 from the University of Virginia, U.S.A.
Roger P. G. H. Tan is a Business Consultant at the Robeco, Rotterdam, based asset management firm. He holds an M.Sc. in Econometrics from the Erasmus University of Rotterdam. He wrote his Master’s thesis on “Credit rating prediction using self-organizing maps” during an internship at the Quantitative Research department of the Robeco Group. His current work involves consulting the Asset Management business unit of Robeco on acquiring or developing IT solutions that meet the information provision needs of the portfolio managers.

Jan van den Berg is Associate Professor of Computer Science, Erasmus University Rotterdam, member of IEEE, and Fellow at the Rotterdam Institute for Business Economic Studies (RIBES). He is a mathematical engineer from the Technical University of Delft. His Ph.D. deals with the relaxation dynamics of recurrent neural networks. His current research interests concern (fundamental issues in the field of) machine intelligence, especially fuzzy systems and neural networks, and e-business security.

Willem-Max van den Bergh is Associate Professor of Financial Economics, Erasmus University Rotterdam, and Fellow at the Rotterdam Institute for Business Economic Studies (RIBES). He contributed to several books on forecasting financial markets and application of neural nets for trading in financial markets. He also published a number of articles in this field in international academic journals. Current research topics include advanced pattern recognition techniques and intelligent agent based analysis of financial markets.

David West is an Associate Professor of Decision Sciences at East Carolina University in Greenville, North Carolina, where he teaches Operations Management and Management Science. His research interests include the application of neural network technology to such areas as classification decisions, manufacturing process control, and group clustering. He has published in the European Journal of Operations Research, Computers & Operations Research, International Journal of Medical Informatics, Artificial Intelligence in Medicine, and Omega-The International Journal of Management Science.

Robert J. Willis graduated from the University of Birmingham with an honours degree in Mathematics, a Master of Science degree in Operational Research, and the degree of Doctor of Philosophy in Project Scheduling. For the
next four years he was employed as an Operational Research Executive in the British coal industry and was involved with the development of underground transport systems. In 1977 he emigrated to Australia, where he is currently Director and Associate Dean of Master of Business Administration programs in the Faculty of Business and Economics. Professor Willis is an active adviser to business, industry, government, and the law, and he is the author of several books and many research publications over a wide range of business and information technology applications.

Katsutoshi Yada received a M.A. from Kobe University of Commerce, Hyogo, Japan, in 1994. From 1997 to 2000, he was previously an Assistant Professor in the Department of Business Administration, Osaka Industrial University, Osaka, Japan. He is currently an Associate Professor in the Faculty of Commerce, Kansai University, Osaka, Japan. His research interests lie in information strategy concerning data mining and its effects on organizations. He is a member of IEEE Computer Society, Organizational Science Society of Japan, Japan Business Management Society, and Japan Society for Management Information.

JingTao Yao is a Senior Lecturer at the Department of Information Systems, College of Business, Massey University, New Zealand. He obtained a B.Eng. and an M.Sc. in Computer Science from Xi’an Jiaotong University in 1983 and 1988, respectively, and a Ph.D. degree in Information Systems in 1999 from the National University of Singapore. He taught in the Department of Information Systems at the National University of Singapore, the Computer Science Program of The Open University, and the Department of Computer Science and Engineering at Xi’an Jiaotong University. His research interests include financial forecasting, neural networks, data mining, e-commerce, and soft computing.

Ai Cheo Yeo became a Fellow Member of The Association of Chartered Certified Accountants in 1990. She obtained her Master of Business Systems in 1998. She has worked as an auditor in the Singapore Auditor-General’s Office, DBS Bank, and BP Singapore. She was also a lecturer with the Business Administration Department of the Singapore Polytechnic. Ai Cheo is currently pursuing her Ph.D. at the School of Business Systems, Monash University. Her research area is data mining in the automobile insurance industry. She has published a paper in the International Journal of Intelligent Systems in Accounting, Finance and Management and a paper in Lecture Notes in Computer Science. She has a book chapter which has been accepted for publication in Soft Computing in Measurement and Information Acquisition.
