Kevin F. Downing, PhD, is an associate professor at DePaul University’s college for adult learners, the School for New Learning. His research interests include the investigation of Miocene fossil mammals in the western United States and Pakistan, the character of small mammal diversity and paleoecology through volcanic disturbances and global cooling maxima, the record of stratigraphic and paleogeographic change during the Himalayan Orogeny, and the application of 3-D virtual laboratories for geological instruction in distance learning settings. He was one of the three faculty tasked with establishing the Distance Education program for adults at DePaul, is the author of several science course guides for the DE program, and regularly teaches online science courses. Dr. Downing has published widely in paleontology and stratigraphy, and has presented papers on the application of 3-D learning objects to online geoscience education. Dr. Downing received BS degrees in astronomy and geology from the University of Illinois at Urbana, a Master of Science in Teaching degree in geology from the University of Florida, and a PhD in geoscience with emphasis in paleobiology from the University of Arizona.

Jennifer K. Holtz, PhD, is an assistant professor at DePaul University’s college for adult learners, the School for New Learning. Her areas of interest include the actual act of research and characteristics of researchers, how creativity affects both teaching and learning in the sciences and the implications of brain research to learning. Since joining DePaul University, she has authored multiple distance course guides in the sciences and teaches almost exclusively online, including the mentoring of distance students. Dr. Holtz has published widely in clinical sciences, clinical education, and in distance learning and assessment in the sciences. Her PhD is in adult and continuing education with emphasis in research education, from Kansas State University; her Masters is in gerontology with clinical emphasis, from Wichita State University, and her Bachelors is in biology with emphasis in human biology, from Kansas Newman College (now Newman University).

Author of the Foreword:

W. Franklin Spikes, EdD, is a professor of educational leadership and director of the Doctoral Program at Kansas State University. His research interests are related to program
evaluation, human resource development and higher education. Spikes is a past president of the American Association for Adult and Continuing Education, a past American Council on Education Fellow in Academic Administration, and is a member of the inaugural class in the International Adult Education Hall of Fame. Currently he serves as the president of the Faculty Senate at Kansas State. Spikes has been actively involved in the field of higher and adult education for a number of years, has published widely and has presented scholarly works at venues throughout North America and abroad Dr. Spikes received his BS Ed, MS, and EdD from Northern Illinois University.
