Asif Akram studied chemical engineering at Punjab University, Lahore, Pakistan. He has since worked in the IT research field. He recently joined Imperial College, London, and the London E-science Centre to work on the EU-funded GridCC Project. He had also worked in the CCLRC, one of Europe’s largest multidisciplinary research organizations on the Workflow Optimization for Scientific Applications (WOSE). His research interests are distributed programming, and particularly Web services. During his research career he has worked on various projects implementing Web services and orchestrating these Web services into complicated workflows. He has also contributed to various books, published numerous research papers, and written tutorials for IBM developerWorks. Before joining Imperial College and CCLRC, he taught at different universities.

Mehmet S. Aktas received an MSc from Syracuse University in computer science in 2001. He is a PhD candidate in the computer science department and graduate research assistant in the Community Grids Lab at Indiana University. His areas of research include distributed information systems for Grid and Web service-oriented architectures, geographical information systems, Web mining, and semantic Grid.

Rob Allan is head of the Grid Technology Group at CCLRC Daresbury Laboratory, with an interest in distributed service development and deployment and user interfaces for research, mainly in the natural sciences. Allan’s background is as a researcher in theoretical atomic physics, doing large scale computational modeling. He has also developed numerical algorithms and parallel computing and Grid tools for the UK Collaborative Computational Projects and HEC communities, for example, through CCP2, CCP6, HPCI, and UKHEC initiatives. He has skills in FORTRAN, Perl, and C/C++. Rob has a practical knowledge of Grid and Web services middleware and helped to set up CCLRC’s E-science Centre and the UK’s Grid Support Centre, and has acted as PI or co-PI in numerous high-profile research council and JISC grants. He has written several technical evaluations, including the DTI-funded Globus evaluation report (December 2001) and the JISC Sakai Evaluation report (December 2004). Rob is currently acting as e-research representative on the Joint Framework Working Group (JISC UK and DEST Australia) and is chair of the Operations Board of the NW-GRID and chair of the Service Delivery Board of National Centre for E-social Science.

Elisa Bertino is a professor of CS and ECE at Purdue University, and research director of the Center for Information and Research in Information Assurance and Security. Her recent research focuses on privacy techniques for databases, digital identity management, policy systems, and security for Web
service. She is a fellow of ACM and of IEEE. She received the IEEE Computer Society 2002 Technical Achievement Award and the IEEE Computer Society 2005 Kanai Award. She is an editor-in-chief of *VLDB Journal* and an editorial board member of *ACM TISSEC, IEEE TDSC, and IEEE Security & Privacy*.

**Yildiz Beytullah** is a PhD candidate in the Computer Science Department, and graduate research assistant in the Community Grids Lab at Indiana University. He received an MSc from Syracuse University in Computer Science in 2001. Most of his research work is connected with the study and development of message-oriented middleware, Semantic Web, Grid, and Web service architecture. His current research focuses on handler architecture for Web services.

**Konstantin Beznosov** is an assistant professor at the Department of Electrical and Computer Engineering, University of British Columbia, where he founded and directs the Laboratory for Education and Research in Secure Systems Engineering ([lersse.ece.ubc.ca](http://lersse.ece.ubc.ca)). His primary research interests are distributed systems security, usability and security, secure software engineering, and access control. Prior to UBC, Dr. Beznosov was a security architect with Quadrasis, Hitachi Computer Products (America), Inc., where he designed and developed products for security integration of enterprise applications, as well as consulted large telecommunication and banking companies on the architecture of security solutions for distributed enterprise applications. Dr. Beznosov did his PhD research on engineering access control for distributed enterprise applications at the Florida International University. He actively participated in standardization of security-related specifications (CORBA Security, RAD, SDMM) at the Object Management Group, and served as a co-chair of the OMG’s Security SIG. Having published a number of research papers on security engineering in distributed systems, he is a co-author of *Enterprise Security with EJB and CORBA* and *Mastering Web Services Security*.

**Rafae Bhatti** is currently a post-doctoral researcher at IBM Almaden Research Center in San Jose, California. His research interests include information systems security, with emphases on design and administration of access management policies in distributed systems. His recent research focuses on the access management problems posed by the emerging federated paradigm of information sharing and collaboration. His work on XML-based access control framework for the role based access control (RBAC) model has recently been cited by the OASIS consortium in their official announcement of the RBAC standard. He is a member of the ACM, IEEE, and the IEEE Computer Society.

**Barbara Carminati** is an assistant professor of computer science at the University of Insubria at Varese, Italy. Carminati received an MS in computer sciences in 2000, and a PhD in computer science from the University of Milano, in 2004. Her main research interests include database and Web security, XML security, WS security, Web semantic security, secure information dissemination, and publishing. Dr. Carminati has served as program committee member of several international conferences and workshops (SACMAT, COOPIS, PST, MSW, etc.), and as reviewer for various international journals and conferences (IEEE TKDE, ACM TOIT, etc.). She is on the editorial board of the *Computer Standards & Interfaces* (Elsevier Press).

**David Chadwick** is a professor of information systems security at the University of Kent, and the leader of the Information Systems Security Research Group. He is a member of IEEE and ACM. He
specialises in public key infrastructures, privilege management infrastructures, trust management, and Internet security research in general. Current research topics include: policy-based authorisation, the management of trust, the delegation of authority, and autonomic security. He actively participates in standardisation activities, is the UK BSI representative to X.509 standards meetings, and is the author of a number of Internet Drafts, RFCs, and Global Grid Forum documents. He has published widely, with over 80 publications in international journals, conferences, and workshops, including three books and 10 book chapters.

Sanjay Chaudhary is an associate professor at Dhirubhai Ambani Institute of Information and Communication Technology (DAIIICT), Gandhinagar, India. His research areas are distributed computing, Grid computing, Semantic Web, and ICT applications in agriculture. He has authored a number of research papers in international conferences and workshops, including IEEE Wireless Communications and Networking Conference (WCNC), International Conference on Services Computing (SCC), Asia Pacific Software Engineering Conference (APSEC), COMmunication System software and Middleware (COMSWARE), International Conference on Advanced Computing & Communications (ADCOM), International Conference on Innovations in Information Technology, International Workshop on Innovative Internet Community Systems (I2CS), International Workshop on Distributed Event-Based Systems (DEBS), International Workshop on Semantic and Dynamic Web Processes (SDWP), and others. He has served on many program committees of international conferences and workshops, including Web Services track of International World Wide Web Conference Committee (IW3C2), International Conference on Business Process Management (BPM), International Workshop on Semantic and Dynamic Web Processes (SDWP), and others. He has authored three books and a number of book chapters. He holds a doctorate degree in computer science from Gujarat Vidyapeeth. Prior to joining DAIIICT, he worked with Gujarat University, and he has also worked on various large-scale software development and consultancy projects for the corporate sector, the cooperative sector, and government organizations in India and the United States.

Nick Cook is a lecturer in computing science at Newcastle University. He has a BSc in mathematics from Manchester University, and an MSc and a PhD in computing science from Newcastle University. His research concerns middleware support for B2B e-commerce. He has worked on two major collaborative research projects, as a Ph.D. student for the TAPAS European project on complex service provisioning on the Internet, and as a research associate for the Gold UK e-science project on middleware support for virtual organisations.

Asuman Dogac is a full professor of the Department of Computer Engineering at the Middle East Technical University, and the founding director of the Software Research and Development Center. She is a graduate of the Department of Electrical Engineering, Middle East Technical University, and was a post-doc at the University of California, Los Angeles, in 1981. In 2004, Professor Dogac received the IBM (USA) Faculty Award. She is also the recipient of several local awards: the 1991 Mustafa Parlar Research Award, the 1994 Husamettin Tugac Research Award, the 1999 METU Achievement Award, the 2000 METU Tarik Somer Superior Achievement Award, the 2000 Mustafa Parlar Science Award, and the 2001 Tarik Somer Award.
About the Contributors

**Schahram Dustdar** is a full professor of computer science with a focus on Internet technologies at the Distributed Systems Group, Information Systems Institute, Vienna University of Technology (TU Wien), where he is director of the Vita Lab. He is also honorary professor of information systems at the Department of Computing Science at the University of Groningen (RuG), The Netherlands.

**Elena Ferrari** is a professor of computer science at the University of Insubria, Italy, since March 2001. She received an MS in computer science from the University of Milano (Italy) in 1992, and a PhD in computer science from the same university in 1998. Her main research interests are Web security, access control and privacy, and multimedia databases. On these topics, she has published more than 100 scientific publications in international journals and conference proceedings. Dr. Ferrari has served as program chair of the 4th ACM Symposium on Access Control Models and Technologies (SACMAT’04), software demonstration chair of the 9th International Conference on Extending Database Technology (EDBT’04), and co-chair of the First COMPSAC’02 Workshop on Web Security and Semantic Web. She has also served as program committee member of several international conferences and workshops. Professor Ferrari is in the editorial board of the *VLDB Journal* and the *International Journal of Information Technology (IJIT)*. She is a member of ACM and senior member of IEEE.

**Geoffrey Fox** received a PhD in theoretical physics from Cambridge University in 1967. He is a professor in the Department of Computer Science, School of Informatics and Physics at Indiana University. He is the director of the Community Grids Lab at Indiana University. He was also the director of the Northeast Parallel Architectures Center at Syracuse University from 1990-2000. He has led activities to develop prototype high performance Java and Fortran compilers and their runtime support. His research group has pioneered use of CORBA and Java for both collaboration and distributed computing. He helped set up the Java Grande forum to encourage use of Java in large-scale computations.

**Arif Ghafoor** is currently a professor in the School of Electrical and Computer Engineering at Purdue University, and is the director of the Distributed Multimedia Systems Laboratory. He is pursuing research in information security and multimedia systems. Dr. Ghafoor has served on the editorial boards of various journals and has co-edited a book entitled *Multimedia Document Systems in Perspectives* and has co-authored a book entitled *Semantic Models for Multimedia Database Searching and Browsing*. Dr. Ghafoor is a fellow of IEEE. He has received the IEEE Computer Society 2000 Technical Achievement Award for his research contributions in the area of multimedia systems.

**Gadgil Harshawardhan** holds a BE in computer engineering from Mumbai University, India, and an MS in computer science from Indiana University. He is interested in publish subscribe systems, Web services, and workflow technologies and management issues in large scale distributed systems. He currently works in the Distributed Systems Engineering Group at Amazon.com, Seattle. He is also pursuing his PhD in computer science from Indiana University, Bloomington.

**Patrick C.K. Hung** is currently collaborating with Boeing Phantom Works (Seattle, USA) and Bell Canada’s Privacy Center of Excellence on security- and privacy-related research projects. Patrick has been serving as a panelist of the Small Business Innovation Research and Small Business Technology Transfer programs of the National Science Foundation (NSF) in the states. He is an executive commit-
About the Contributors

Prateek Jain is a student in Dhirubhai Ambani Institute of Information and Communication Technology. He is pursuing his PhD under the supervision of Dr. Sanjay Chaudhary. His research interests are Web services, workflow, and Grid services. He also worked on the IBM Eclipse Innovation Grant 2005 for a research project on “Framework for Processing and Visualisation of Critical Alerts for Risk perception and Efficient Decision-Making.”

Zakir Laliwala is a PhD candidate in the Dhirubhai Ambani Institute of Information and Communication Technology (DA-IICT <http://www.daiict.ac.in>). He is currently working as a research assistant on the IBM Eclipse Innovation Grant 2005 project “Framework for processing and visualization of critical alerts for risk perception and efficient decision-making.”

David Meredith is a software engineer for the UK National Grid Service and a member of the Grid Technology Group at CCLRC Daresbury Laboratory. Meredith’s main research areas include distributed computing and enterprise systems, with special application to the physical sciences. Meredith’s background is as a researcher in computational modeling of petroleum systems.

Tuncay Namli is working as a senior software engineer in Software R&D Center of Middle East Technical University (METU). He is a graduate of Department of Computer Engineering, METU. Namli is currently working on his MSc thesis in the graduate program of Computer Engineering Department of METU. In METU SRDC, he has worked on several IST projects, namely, EUMEDIS-311 DAEDALUS, IST-1-002104-2005 SATINE and IST-1-002103-ARTEMIS.

Aisha Naseer (BSc, MSc) is a researcher at the Department of Information Systems and Computing at Brunel University, UK, where she is studying for a PhD in the area of HealthGrid development. She is a qualified computer engineer and has studied mathematics and statistical analysis in her first degree (1996) at the University of Punjab, and later received an MSc (2003) in computer science from the Hamdard University, Pakistan, specialising in software engineering and artificial intelligence. She worked as a lecturer in the Computer Science Department, Lahore College for Women University, Pakistan (2001-2003). Currently, she is also a lecturer at the Uxbridge College, London. In the last 5 years, she has taught various computer science courses at both the undergraduate and postgraduate level. She has published several papers in journals and international conferences. Her research interests include intelligent data management, health informatics, HealthGrid applications, Grid computing, and artificial intelligence.

Sangyoon Oh received an MS in computer science from Syracuse University and a PhD in computer science from Indiana University, USA (2006). He is currently a senior researcher of the SK telecom company, South Korea. Oh has worked in a variety of computer science fields focusing on mobile computing, Web service technology, Grid systems, and Semantic Web technology.
About the Contributors

**Shrideep Pallickara** received his master’s degree and PhD in computer engineering from Syracuse University (1998 and 2001, respectively). He is currently a researcher at the Community Grids Lab at Indiana University. His research interests are in the area of large-scale distributed systems with an emphasis on fault-tolerant and secure systems, Grid computing, and Web services. He also leads the NaradaBrokering project which facilitates the development of loosely-coupled distributed systems.

**Sima Patel** is a research associate/software engineer at the Community Grids Lab at Indiana University, Bloomington, Indiana. She got her master’s degree in computer science from Illinois Institute of Technology in 2004. She is involved in the research and development of middleware software for Grids computing.

**Marlon E. Pierce** is the assistant director of the Community Grids Lab at Indiana University. He received a PhD in computational condensed matter physics from Florida State University in 1998. Subsequently, his research has concentrated on the application of Web services, Web portal gateways, messaging systems, and related technologies to scientific applications. He has worked on numerous Grid projects to support earthquake science, computational chemistry, and chemical informatics. He is also the project leader for the Open Grid Computing Environments Project, which provides a common software stack for science portals.

**Christian Platzer** is a PhD student at the Distributed Systems Group, Information Systems Institute, Technical University of Vienna. His research areas include Web service engineering, service-oriented architectures, and Web service technologies with an emphasis on service discovery and search engines for Web services.

**Paul Robinson** is a senior consultant engineer at Arjuna Technologies, where he leads transactional middleware consultancy and training. He has a BSc and a PhD in computing science from Newcastle University. While at the university, Robinson also contributed to the TAPAS European project and the Gold UK e-Science project.

**Florian Rosenberg** is research assistant and PhD student at the Distributed Systems Group, Information Systems Institute, Technical University of Vienna. His research areas include software engineering in general, service-oriented architectures, and Web service technologies with an emphasis on service composition and quality of service (QoS) aspects.

**Daniel Sanz** obtained the computer science engineering degree at Carlos III University in 2002. Then he started to work as assistant teacher at this university and as a PhD student in the CS Doctorate Program. His research topics are the application of RBAC to hypertexts, both at theoretical as well as practical/technological levels. He is also interested in the model-driven security paradigm, and is particularly concerned with the integration of access control concerns in hypermedia and Web development methods from a methodological point of view. Currently, he is developing his PhD thesis, titled “A role-based access control framework for hypermedia.”

**Santosh Shrivastava** was appointed professor of computing science, Newcastle University in 1986, where he leads the Distributed Systems Research Group. He received his PhD in computing science
from Cambridge in 1975. His research interests are in the areas of distributed systems, fault tolerance and application of transaction and workflow technologies to e-commerce, virtual organizations, and Grid-based systems. He has led and managed several European Union funded, multipartner research projects, beginning with BROADCAST (1992) to a project on complex service provisioning on the Internet, TAPAS, that started in 2002.

**Lampros K. Stergioulas** (BSc, MSc, PhD, MIEE, MIEEE, CEng, MIOP, CPhys, MCS) is a senior lecturer in the Department of Information Systems and Computing at Brunel University, UK, where he serves as director of the MSc programme in telemedicine and e-health systems. He is a qualified chartered engineer and has studied informatics and physics in his first degree (1991) at the University of Athens, and later received an MSc (1992) and PhD (1997) in electrical engineering from the University of Liverpool, UK, specialising in information engineering and communications. From 1996 to 1998 he worked as a research associate in the Cambridge University Engineering Department. He has held lectureship posts in the Manchester School of Engineering at Manchester University (1998-1999) and in the Communication Systems Department of Lancaster University (1999-2003). Over the past 10 years, he has taught a wide range of undergraduate and postgraduate courses in computer science and engineering. Dr. Stergioulas has published over 90 papers in journals and international conferences. He has supervised and examined several PhD dissertations in the areas of health information systems, information processing, grid computing, and computer science in general. He has held several National and European Grants in medical and health informatics, information processing, human-centred communications and computing, and intelligent systems. He has been a principal investigator in several UK and EU research projects. His research interests include intelligent data processing, biomedical informatics, health information systems, grid computing, human-centred computing, computing education, and intelligent information systems.

**Damodar Yemme** is a senior systems analyst at Wheaton Van Lines, Inc. He received his MS degree from the National Institute of Technology, Warangal, India, in 1997. He has worked for Fortune 500 companies as senior J2EE programmer. Most of his research work is connected with the portals and Web services architecture. His current research focuses on WS-reliable messaging and WS-reliability.
