Index

A

antitrust 1, 3–4, 8, 12, 15–16, 18

B

benchmarks, IT management 35–37
benchmarks, knowledge management 37–38
benchmarks, quality management 37
bilingualism 86, 89–91, 93, 96–97, 102
Bonferroni corrections 211
business components 144, 151–152, 159–161

collaborative planning, forecasting, and replenishment (CPFR) 185–186, 190–198, 200
collaborative planning, forecasting, and replenishment (CPFR), methodology description 193–194
collaborative planning, forecasting, and replenishment (CPFR), philosophy description 191–192
collaborative planning, forecasting, and replenishment (CPFR), standards description 195
collaborative planning, forecasting, and replenishment (CPFR), technology description 194–195
committee drafts (CDs) 92
communication network 105, 108, 111
competence society 5
complementarities 146, 161
consortia, industry 248
cooperaion platform for research and standards (COPRAS) 248–255

devolving countries (DCs) 227–232, 239, 242–243
device independence 214–217, 219–220, 222–225
diffusion curve 174–176
diffusion of innovation 125, 135
diffusion theory 174

e

enquiry drafts (CDVs) 92
evaluation knowledge 169–170, 174, 176, 182
evaluation knowledge, diffusion of 174–176
event-study methodology 203–206, 209, 212

free riding 3

general public license (GPL) 228, 232–233
global medium-sized enterprises (GMEs) 6–7
GlobalNorm process 9–18
GNU general public license 232–233, 245
standarization, company, best practices, steering groups 32–33
standarization, company, best practices, user involvement 34
standarization, company, evaluation 30–32
standarization, economic expectations 2–4
standarization, formal 1–5, 7–13, 15–18
standarization, industry 3, 5, 9
standarization, IT 20–26
standarization, IT, government incentive 23–24
standarization, IT, impact 22
standarization, IT, individual incentive 24–25
standarization, IT, user incentive 22–23
standarization, terminology 2
standarization action plans (SAPs) 249, 251
standarization and supply networks 105–121
standarization problem (SP) 107–108, 119
standarization processes 49–61, 63–64
standards, adoption of 129–132
standards, adoption of, compatibility factor 130–131
standards, adoption of, organizational influence 133–135
standards, adoption of, relative advantage factor 130
standards, adoption of, vendor support factor 131–133
standards, and software engineering 203–213
standards, business component market 143–162
standards, business component market, economic perspective 150–156
standards, business component market, knowledge-codification perspective 156–159
standards, business component market, system theoretical perspective 144–150
standards, cascading style sheets (CSS) 214–226
standards, cascading style sheets (CSS), device independence 220–223
standards, cascading style sheets (CSS), usability 223–224
standards, closed 3
standards, communication 105–111, 113–119, 121
standards, communication, diffusion of 105–109, 113, 115–121
standards, company 2–3, 28–32, 39–40, 45–46
standards, computer server platform 122, 126–129
standards, computer server platform, adoption of 126–129, 129–132
standards, concept of 189–190
standards, consortium-based 1–4, 9–11, 13–15, 19
standards, definition 50
standards, economics of 124
standards, extensible markup language (XML) 218–219, 225–226
standards, extensible style language (XSL) 218–219, 225
standards, extensible style language transformation (XSLT) 218–219
standards, forum 9
standards, hypertext markup language (HTML) 214–216, 218–226
standards, IEC, development stages 92–94
standards, IEEE POSIX 66–85
standards, information technology (IT) 123
standards, international (ISs) 87–99, 102–103
standards, ISO 9000 203–206, 211–212
standards, IT 50
standards, localization of 87–104
standards, open 2–3
standards, organizational 123–124, 127
standards, quality 148, 154
standards, specification 148–149
standards, standard generalized markup language (SGML) 217–218
standards, UNIX 67
standards, Web design 214–226
standards consortia 49–51, 53–57, 59–60, 62
standards development organizations (SDOs) 66, 68, 72, 74, 77, 82–83
standards setting organization (SSO) 50–52, 54–56, 58, 60–63
supply chain connectivity 115–116, 118
supply chains 110, 118–119
supply networks 108–118
switching costs 122–125, 129–130, 132–133, 135–137, 139
switching costs, moderators 132–133
switching costs, moderators, scope of deployment 122–123, 129, 135
switching costs, moderators, timing of deployment 133
system V interface definitions (SVID) 72, 74, 76

T

target language (TL) 87, 92, 100, 103
technological variety 183
technology, concept of 189
trade-related IP rights (TRIPS) 228, 240
transaction costs 151–152, 154–155, 157
transaction costs, horizontal 170, 172–173, 182
transaction costs, vertical 169–170, 172–173, 176, 182
U
unified modeling language (UML) 114

V
vertical compatibility 167–168, 170–171, 181
Voluntary Interindustry Commerce Standards Association (VICS) 190–197, 200

W
Windows OS 233–234, 236–240, 242–244
