Raymond Papp is an associate professor in the Lender School of Business at Quinnipiac University. Before pursuing his PhD, Dr. Papp worked as a computer programmer, senior analyst and management consultant. His research interests include strategic impacts of information technology, Internet-based learning, strategic alignment and emerging information technologies. His publications have appeared in several academic and practitioner journals, and he has presented research at professional and executive conferences.

Dr. Papp completed his doctorate in information management at Stevens Institute of Technology. His dissertation, “Determinants of Strategically Aligned Organizations: A Multi-Industry, Multi-Perspective Analysis” is an empirical investigation into the determinants of strategic alignment, specifically addressing the impact of title/function, industry and firm performance.

David Bahn is an assistant professor of management information systems at Metropolitan State University in Minneapolis/St. Paul. He received his PhD in information and decision sciences from the Carlson School of Management of the University of Minnesota and his MBA from the Stern School of Business of New York University. Dr. Bahn teaches systems analysis, electronic commerce and business strategy. A former systems analyst, Dr. Bahn is also a consultant on information technology and electronic commerce for business and government organizations. He is currently researching “clicks and mortar” business strategy: how firms balance the imperatives of operating “brick and mortar” business operations with electronic commerce channels.

Christian Bauer started his academic career at the MIS department of the Vienna University of Economics and Business Administration in 1995 as an assistant professor/lecturer. He completed his doctoral research on reference modeling of mass information systems for the banking industry in 1997. Thereafter
he accepted a postdoctoral fellowship from Curtin University and joined the Electronic Commerce Network in Western Australia. Research areas include Web information systems development and on-line financial services.

**Katherine Boswell** is currently a PhD candidate in the MIS program at the University of Mississippi. Her research interests include strategic information systems, electronic commerce and appropriate use policy. She has work published in the *Southwest Decision Science Institute 2000 Conference Proceedings*.

**Mary Brabston** is assistant professor of MIS in the Faculty of Management at the University of Manitoba. She received her PhD from Florida State University, her MBA from the University of Alabama at Birmingham, and her BA from Vanderbilt University. Previous work has been published in *Human Relations*, the *Journal of Computer Information Systems*, the *Journal of Information Systems Education*, and the *Journal of Computer and Information Technology* among others. Her current research interests include electronic commerce applications for executives, strategic information systems planning, and organizational impacts of technology.

**John R. Carlson** received his PhD from Florida State University in 1995 and serves as an assistant professor of information systems in the Hankamer School of Business at Baylor University. Recent work has appeared in the *Academy of Management Journal*, the *Journal of the American Society for Information Science* and the *Information Systems Journal*. His current research interests include computer-mediated communication, computer-supported decision making and ethical issues related to information systems.

**Yolande E. Chan** is an associate professor of management information systems at Queen’s University. She holds a PhD from the University of Western Ontario, an MPhil in Management Studies from Oxford University, and SM and SB degrees in Electrical Engineering and Computer Science from the Massachusetts Institute of Technology. She is a Rhodes Scholar. Prior to joining Queen’s, Yolande worked with Andersen Consulting as an information systems consultant. Yolande currently conducts research on knowledge management, the alignment of information systems strategy and business strategy, and the business performance impacts of information technology investments. She has published her research in a number of refereed books and journals such as *Information Systems Research*, *Journal of Management Information Systems*, *Journal of Strategic Information Systems*, and the *Academy of Management Executive*.

**Ron de Groot** works at the Department of Personnel Planning at the Royal Netherlands Navy. He manages a small group of IT-specialists who are involved in developing a variety of tools to provide the Royal Netherlands Navy with information how to get sufficient, competent and motivated personnel, who operate effectively in circumstances of war, crises and peace-operations now and in the future.
Wilfred Geerlings has an MSc in sociology from the University of Groningen (1996). In his study his focus was on research methodology and simulation in the field of labor and organizations. Currently he is working as a PhD student at the systems engineering group of the faculty of technology, policy and management of Delft University of Technology. The subject of his PhD research is to develop simulation models to support strategic human resource forecasting processes in organizations. Research results so far have been presented at several international conferences.

Petter Gottschalk is an associate professor at the Norwegian School of Management. Dr. Gottschalk has been the CIO of ABB Norway and the CEO of two major Norwegian corporations. He has published in Information & Management, Journal of Global Information Technology Management, Journal of Knowledge Management and Journal of Information, Law and Technology.

Gareth Griffiths is a senior lecturer in the business information technology department within the Manchester Metropolitan University, UK. He has extensive industrial experience gained from being a consultancy manager with Hewlett Packard both within the US and England. His research areas include strategic information systems, e-commerce and the adoption of new technologies within Eastern Europe. He has published numerous articles in leading national and international conferences and journals. He is currently the course director for a business information technology honours degree and has taught on a variety of undergraduate and post graduate degree programmes throughout Poland, Croatia, Bulgaria as well as the UK. He has also been a reviewer for a number of conferences and journals including the Academy of IS (UK), ICIS and the Journal of Strategic Marketing.

Ray Hackney is director of business information technology research within the Manchester Metropolitan University, UK. He holds a Cert Ed, BSc (Hons), MA and PhD degrees from leading universities and has contributed extensively to research in the field of information systems with publications in numerous national and international conferences and journals. He has taught on a number of MBA programmes including MMU, Manchester Business School and the Open University. He leads the organising committee for the annual BIT and BITWorld Conference series and is a member of the Strategic Management Society and Association of Information Systems. Dr. Hackney has served on the board of the UK Academy for Information Systems since 1997 and is also the vice president of research for IRMA (USA), associate editor of the JGIM, JEUC, JLIM and ACITM. He is also a reviewer for a number of publishers, journals and conferences and was an associate editor for ICIS’99. His research interests are the strategic management of information systems within a variety of organisational context.

Chi Hwang is currently a member of the information systems faculty at California State Polytechnic University—Pomona. Prior to earning his doctorate at the University of Mississippi, Dr. Hwang spent ten years in industry as a systems analyst and consultant. His current research interests include group decision

Muhammadou M.O. Kah is currently an assistant professor of management—MIS/e-commerce at Rutgers University, School of Business-Camden. Between 1996-2000, he was a faculty member at Howard University, School of Business, Department of Information Systems & Analysis. He taught as an adjunct at the George Washington University information systems’ graduate program and also at Saint Mary’s University Halifax, Canada’s extension program in The Gambia, West Africa. Dr. Kah received his bachelor’s, master’s, advanced graduate certificate in human factors and a PhD in information management (systems) from Stevens Institute of Technology, Hoboken, NJ. He also recently received a master of science in finance (MSF) from George Washington University, Washington, DC. Dr. Kah is currently a consultant at The World Bank, consulted for GAMTEL (The Gambia Telecommunication Company LTD.) and Fannie-Mae. Dr. Kah previously worked at Strand Management Solutions, Inc., AT&T Bell Laboratories and Education Testing Services (ETS). He was also director of institutional research and strategic planning at Bloomfield College, NJ. His research interest includes economics of information technology and telecommunication, strategic use of IT in organizations and governments of developing countries; electronic business and electronic commerce infrastructure use and valuation; knowledge management and data mining; real options and financial engineering.

Awie Leonard was born in Nigel, South Africa, and matriculated at the Technical High School in Brakpan. He obtained the degrees BSc, majoring in computer science and mathematics, in 1974 and BSc (Hons) in 1975, both at the Potchefstroom University for Christian Higher Education. He obtained the degree MSc information systems at the University of South Africa in 1981. Having spent a few years in the private sector as systems analyst and designer and project leader, he joined the Department of Informatics at the University of Pretoria as senior lecturer in 1992, where he also obtained the degree Dcom (informatics) in 1998.

Jerry Luftman is the executive director and distinguished service professor for the graduate information management programs at Stevens Institute of Technology. His twenty-two year career with IBM included strategic positions in management (IT and consulting), management consulting, information systems, marketing and executive education. Dr. Luftman played a leading role in defining and introducing IBM’s consulting group. As a practitioner he held several positions in IT, including a CIO. Dr. Luftman’s research papers have appeared in several professional journals and he has presented at many executive and professional conferences. His doctoral degree in information management was received at Stevens Institute of Technology.

Makoto Nakayama is an assistant professor at DePaul University’s School of Computer Science, Telecommunications and Information Systems. His work expe-
About the Authors

Experience includes software engineering, software product development management and strategic planning. His research focuses on strategic use of interorganizational systems and e-commerce impact on business-to-business relationships in retail marketing channels. Dr. Nakayama earned a BS in physics from Science University of Tokyo, an MBA from University of Texas at Austin, and a PhD in management from University of California, Los Angeles.

Mark R. Nelson received his BS from Saint Michael’s College and both an MBA in marketing and a PhD in information science from the University at Albany (SUNY) where his dissertation on cross-functional integration between IT and marketing units won a distinguished dissertation award upon completion. He has taught several information systems management courses and has several professional publications. Dr. Nelson served in a high-level administrative position for a small liberal arts college and worked as a management consultant to higher education institutions in the areas of performance measurement and quality assessment. Currently he is an assistant professor at Rensselaer Polytechnic Institute.

Anne Powell is an assistant professor of computer management and information systems at Southern Illinois University—Edwardsville. She has an MBA and will be completing her PhD in MIS from Indiana University Kelley School of Business. Her current research interests include organizational and individual impacts of virtual work and user acceptance of information technologies.

Brian J. Reithel is currently an associate professor of management information systems at the University of Mississippi. His research interests are in the areas of quality of user-developed applications, strategic use of information systems and modern information systems development techniques. His articles have been published by Decision Support Systems, Data Base, The Journal of Systems and Software, Public Administration Quarterly, The Journal of Computer Information Systems and other business research journals. In addition, he has been the author of numerous papers for regional, national and international conferences. He received his PhD in management information systems from Texas Tech University. Dr. Reithel currently serves as the area coordinator for the MIS/POM area at the University of Mississippi.

Pieter Toussaint has been working at the research department of a software company in the field of hospital information systems. He was involved in a number of research projects on electronic patient records funded by the European Commision. In 1998 he received his PhD on the subject of integration of information systems. Currently he is involved in an electronic patient record research project funded by the Dutch government. He has published in several international journals on medical informatics issues, and has given several international presentations. Currently he is employed as an assistant professor at the faculty of technology, policy and management of the Delft University of Technology.
Alexander Verbraeck has an MSc in mathematics (cum laude, 1987) and a PhD in computer science (1991) from Delft University of Technology in the Netherlands. He worked as assistant professor in information systems until 1995, when he was appointed associate professor in the systems engineering group of the faculty of technology, policy and management (TPM) of TU Delft. He teaches courses on information systems, project management, discrete mathematics, logistics and simulation to undergraduate and graduate students. In addition, more than 60 MSc thesis projects in industry have been coached. Alexander Verbraeck carried out a large number of industry funded research projects, in which simulation and logistics played a central role. Examples of successful research projects are real-time control of AGVs using simulation, decision support for long-term personnel planning and the development of generic, object oriented simulation libraries. Research results have been published in books and journals and they have been presented at many international conferences.

Robert Zmud is professor and Michael F. Price Chair in MIS in the division of MIS, Michael F. Price College of Business, University of Oklahoma. His research interests focus on the organizational impacts of information technology and on the management, implementation, and diffusion of information technology. He is currently a senior editor of MIS Quarterly and serves on the editorial board of Management Science among others. He is a fellow of the Decision Science Institute, the research director for the Advanced Practices Council of SIM, International, and previously served as general conference chair for the 1993 ICIS and as program chair for the 1986 ICIS. He holds a PhD (management) from the University of Arizona, a MS (management) from MIT, and a BAE (aerospace engineering) from the University of Virginia.
