About the Contributors

John Ayoade obtained his PhD degree in information systems under Japanese Government Scholarship from the Graduate School of Information Systems in the University of Electro-Communications, Tokyo, Japan. He has research and teaching experience from research institutes and universities around the globe. His research work focuses on IT emerging technologies (pervasive computing, RFID, computer network security and mobile communications). He has presented and published papers in many international conferences and journals in the USA, Japan, Canada, U.K, Australia, New Zealand and Korea. He is presently an assistant professor in the School of Information Technology and Communications, American University of Nigeria.

David Parry is a senior lecturer in the Auckland University of Technology School of Computing and Mathematical Sciences New Zealand. His PhD thesis was concerned with the use of fuzzy ontologies for medical information retrieval. He holds degrees from Imperial College and St. Bartholomew’s Medical College, London and the University of Otago, New Zealand. His research interests include internet-based knowledge management and the Semantic Web, health informatics, the use of radio frequency ID in healthcare and information retrieval.

Ashir Ahmed. After completing master's of information technology and six years of work as a software developer/analyst; Ashir Ahmed is currently doing PhD in the area of emergency management from Monash University, Australia. So far, he has three published conference papers. In addition to emergency management his other interest areas includes radio frequency identification (RFID), project management and database systems.
**Professor Olaf Diegel**, director of Creative Industries Research Institute, AUT University. Professor Olaf Diegel is both an educator and a practitioner of engineering product development with an excellent track record of developing innovative product solutions. At AUT, he is director of the Creative Industries Research Institute, an interdisciplinary institute that crosses over between engineering, art & design, computers and communications. In his consulting practice he develops a wide range of products for New Zealand and international companies. Over the past 10 years he has developed over 40 commercialized new products including innovative new theatre lighting products, security and marine products and several home health monitoring products. He has received numerous New Zealand and international product development awards, and helped to firmly put New Zealand on the world innovation map.

**Tommaso Di Noia** (t.dinoia@poliba.it) is an assistant professor in information technology engineering at Technical University of Bari (Politecnico di Bari). He got his PhD from Technical University of Bari. His main scientific interests include: Description Logics - theoretical and practical aspects; resource matchmaking; knowledge representation systems for electronic commerce; automatic (Web) services discovery and composition; knowledge representation systems and applications for the Semantic Web. He co-authored papers which received the best paper award at conferences ICEC-2004, IEEE CEC-EEE-2006 and ICEC-2007.

**Eugenio Di Sciascio** (disciascio@poliba.it) received the master’s degree with honours from University of Bari, and the PhD from Politecnico di Bari (Technical University of Bari). He is currently full professor of information technology engineering at Technical University of Bari, and leads the research group of SisInfLab, the Information Systems Laboratory of Technical University of Bari. Formerly, he has been an assistant professor at University of Lecce and associate professor at Technical University of Bari. His research interests include multimedia information retrieval, knowledge representation and e-commerce. He is involved in several national and European research projects related to his research interests. He co-authored papers that received best paper awards at conferences ICEC-2004, IEEE CEC-EEE-2006 and ICEC-2007.

**Francesco Maria Donini** (donini@unitus.it) is a full professor at the Università della Tuscia–Viterbo, Italy. Formerly, he was an assistant professor at the Università La Sapienza, Rome, and associate professor at Politecnico di Bari. His PhD thesis was on description logics; he has subsequently worked on many aspects of knowledge representation in artificial intelligence, both on theoretical issues and practical applications. His research interests range from description logics to non-monotonic reasoning, abduction, algorithms, and complexity of reasoning in KR formalisms to their application in a variety of practical contexts. He co-authored papers that won awards at the IJCAI-1991, ICEC-2004, and IEEE CEC EEE -2006 conferences.

**Toktam Ebadi**, B.E., is a PhD student at the University of Otago, Dunedin, New Zealand. Her research interests are in the areas of distributed computing, collaborative decision-making and Multi agent robotic systems.

**Filippo Gandino** received the MS degree in computer engineering from Politecnico di Torino, Italy, in 2005. He is currently a PhD student at the Department of Computer Engineering of Politecnico di Torino. His research interests include ubiquitous computing, RFID, wireless sensor networks, security and privacy, information systems, and digital arithmetic. He is a member of IEEE Computer Society.
**About the Contributors**

**John D. Garofalakis** (http://athos.cti.gr/garofalakis/) is associate professor at the Department of Computer Engineering and Informatics, University of Patras, Greece, and Director of the applied research department “Telematics Center” of the Research Academic Computer Technology Institute (RACTI). He is responsible and scientific coordinator of several European and national IT and Telematics Projects (ICT, INTERREG, etc.). His publications include more than 100 articles in refereed International Journals and Conferences. His research interests include Web and Mobile Technologies, Performance Analysis of Computer Systems, Computer Networks and Telematics, Distributed Computer Systems, Queuing Theory.

**Bryan Houliston** has a bachelor’s degree in commerce, a master’s degree in Information Technology, and 13 years experience as a professional software developer. He’s in his first year of a PhD researching RFID technology, its applications in health care, and in particular activity analysis. He’s a member of the ACM, the NZ Computer Society, two book clubs, the Auckland Film Society, and Greenpeace.

**Ric Jentzsch** has over 30 years experience in the information technology industry. He has developed and delivered training courses for business and government in Australia, United States, Canada and throughout South East Asia. Ric has more than 60 published works in journals and international conferences. Ric has lectured at universities in Australia, United States, and Canada. His current research interests include: Technology diffusion and adoption - small to medium enterprises (SME) intelligent agents frameworks, models, and incorporation into business Security as a business enhancer Emerging and Developing technologies an SME perspective electronic content management methods, models, practical application Ric is currently on assignment to Compucat Research Pty Ltd as the documentation manager and a researcher.

**Lena Mamykina** (Siemens Corporate Research, Georgia Institute of Technology). Lena Mamykina is a PhD candidate in human-centered computing at the Georgia Institute of Technology. She investigates computing systems that help individuals with chronic diseases maintain their health and quality of life. She holds an MS degree in human-computer interaction from Georgia Tech and BS in Computer Science and Shipbuilding Engineering from the Ukrainian State Maritime Technical University.

**Christos G. Mettouris** is a graduate of the Computer Engineering & Informatics Department in the University of Patras. He holds a master’s degree of the same department. He is a member of the e-learning sector of the Research Academic Computer Technology Institute (RACTI). He has published his diploma thesis work in the 1st Hellenic Scientific Student Computing Conference, obtaining an award for presenting one the 3 top papers. His research interests include wireless technologies and mobile networks.

**Masoud Mohammadian** research interests lie in adaptive self-learning systems, fuzzy logic, genetic algorithms, neural networks and their applications in industrial, financial and business problems. His current research concentrates on the application of computational intelligence techniques for learning and adaptation of intelligent agents. He has chaired over nine international conferences on computational intelligence and intelligent agents. He has published over ninety research papers in conferences, journal and books as well as editing fifteen books. Masoud has over fourteen years of academic experience and he has served as program committee member and/or co-chair of a large number of national and
international conferences. He was the chair of IEEE ACT Section and he was the recipient of Awards from IEEE from USA and Ministry of Commerce from Austria.

**Bartolomeo Montrucchio** received the MS degree in electronic engineering and the PhD degree in computer engineering both from Politecnico di Torino, Italy, in 1998, and 2002, respectively. He is currently an assistant professor of computer engineering at Department of Computer Engineering of Politecnico di Torino, Italy. His current research interests include image analysis and synthesis techniques, scientific visualization and sensor networks (also RFIDs). In these fields he is (co)-author of several scientific publications. Since 2002 he has been a member of IEEE Circuits and Systems Society and a member of Eurographics.

**Elizabeth D. Mynatt** (Georgia Institute of Technology). Beth Mynatt, an associate professor in the College of Computing and director of the GVU Center, received a PhD degree in computer science from the Georgia Institute of Technology in 1995, where she was also a research scientist in the GVU Center. Her research centers around human computer interaction, ubiquitous computing, augmented reality, auditory interfaces, assistive technology and everyday computing.

**Sarita Pais** is currently doing her thesis on “Data Modelling for active RFID tags” at Auckland University of Technology, Auckland, New Zealand. Her supervisor is Dr. Judith Symonds. Sarita had done her bachelor's of science in computer science, mathematics and statistics in St. Aloysius College, Mangalore, India. She has 15 years of experience in the IT field. She has been teaching programming, database and system analysis and design. She is currently teaching in Whitiereia Community Polytechnic, Auckland. She has also assisted in building some applications for in-house use.

**Maryam Purvis**, PhD, is a lecturer in information science at the University of Otago, Dunedin, New Zealand. Dr. Purvis obtained MA in Mathematics from University of Texas at Austin and PhD in information science from the University of Otago, Dunedin. Her research interests are in active learning, collaborative learning, distributed information systems and software engineering.

**Maurizio Rebaudengo** received the MS degree in electronics (1991), and the PhD degree in computer engineering (1995), both from Politecnico di Torino, Torino, Italy. Currently, he is an associate professor at the Department of Computer Engineering of the same Institution. His research interests include testing and dependability analysis of computer-based systems. In the field of RFIDs, his activity is mainly focused on the analysis of traceability systems based on RF devices for agri-food management.

**Erwing R. Sanchez** is a PhD student in the Department of Computer Engineering at the Politecnico di Torino. His research interests include ubiquitous technologies, RFID security, information theory and low-power wireless networks. Sanchez received his MS in electronic engineering from the Politecnico di Torino in 2005.

**Bastin Tony Roy Savarimuthu**, M.E., is a lecturer in information science at the University of Otago, Dunedin, New Zealand. His research interests are in the areas of distributed computing, agent based workflow systems, emergence of norms in agent societies and active learning.
Michele Ruta (m.ruta@poliba.it) received the master’s degree in electronic engineering from Politecnico di Bari (Technical University of Bari) in 2002 and his PhD in Information Engineering from the same University in 2007. His research interests include pervasive computing and ubiquitous Web, mobile service discovery and composition, knowledge representation systems and applications for wireless ad-hoc contexts. On these topics he has co-authored various papers in international journals and conferences. He is involved in various research projects related to his research interests. He co-authored a paper which received the best paper award at the conference ICEC-2007.

Floriano Scioscia (f.scioscia@poliba.it) received the master’s degree in information technology engineering from Politecnico di Bari (Technical University of Bari) in 2006. He is currently pursuing his PhD in Information Engineering at the same University. His research interests include pervasive computing, mobile service discovery and composition, knowledge representation systems and applications for wireless ad-hoc contexts. He co-authored a paper which received the best paper award at the conference ICEC-2007.

Bin SHEN received the BS degree from Department of Electronic Engineering, Tsinghua University, Beijing, China, in 2007. He is a master candidate in the same department in Tsinghua University now. His research interests include statistical learning, pattern recognition and computer vision. Currently, he is working on object tracking in video sequence.

Chin Boo Soon is a PhD candidate at The University of Auckland. He is an assistant lecturer in The Graduate School of Enterprise at The University of Auckland Business School. His current research topic is the adoption of radio frequency identification in the supply chains. Chin Boo has worked in the logistics industry for ten years including six years in military logistics. He received a bachelor’s of commerce in information systems (first class honors, 2002) and a master’s degree in information systems (2003) from The University of Auckland.

Ly-Fie Sugianto is an expert of international standing, appointed by the Australian Research Council College of Expert. Currently, she is a senior lecturer at the Faculty of Business and Economics, Monash University, Australia. She has published extensively (70+ refereed articles) in the fields of eCommerce, DSS, portals and optimization. Dr. Sugianto has also served as journal editorial board, referee for international journals, and program committee at international conferences.

Eufemia Tinelli (e.tinelli@poliba.it) has a master’s degree in information technology engineering from the Technical University of Bari (Politecnico di Bari), Italy, and is currently pursuing her PhD in computer science at the University of Bari. Her research interests are in the areas of efficient storage and retrieval techniques for very large knowledge bases and applications of Semantic Web technologies to e-commerce.

David C. Wyld is the Robert Maurin Professor of Management at Southeastern Louisiana University, where he directs the College of Business’ Strategic e-Commerce/e-Government Initiative. He is a noted RFID speaker/consultant/writer, being a frequent contributor to both academic and industry publications. He is a contributing editor to both RFID news and global identification. He is also the author of
the recent research report, “RFID: The Right Frequency for Government,” the most downloaded report in the history of the IBM Center for the Business of Government. In 2006, he was named a Rising Star in Government Information Technology by Federal Computer Week.

Yu-Jin Zhang is professor of image engineering with the Department of Electronic Engineering at Tsinghua University, Beijing, China, since 1997. His research interests include image processing, image analysis and image understanding, as well as their applications. He has published more than 300 research papers and 18 books, including two monographs: “Image Segmentation” and “Content-based Visual Information Retrieval” (Science Press), and two edited books: *Advances in Image and Video Segmentation* and *Semantic-Based Visual Information Retrieval* (IRM Press). He is vice president of China Society of Image and Graphics and the director of Academic Committee of the Society. He served the program chair of the First, Second, Fourth and Fifth International Conference on Image and Graphics (ICIG’2000, ICIG’2002, ICIG’2007, and ICIG’2007). http://www.ee.tsinghua.edu.cn/~zhangyujin/.
