Index

A
abstract interface items 147, 148, 149, 150
accomplish relation (AR) 44
adaptation costs 156
AIG toolkits 152
appearance constraints 28
applicability bounds 37
Association for Computing Machinery (ACM) 91, 94
Association for Information Systems (AIS) 91, 94
Association of Information Technology Professionals (AITP) 91, 94
associative multiplicity 29

B
behavioral model 260
behaviors of software architectures 246
bi-temporal data 2
blogs 169, 171
Bologna declaration 90
build time 185
business rules frameworks 35

C
cardinality 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 39, 40, 137, 148
cardinality for attributes 26
cardinality rules 26
cardinality semantics 27
CASE tools 26, 38, 55, 70, 93, 117, 132, 135, 140
causal loop diagram 112, 113
C-EPC notation 188
Chrono conceptual model 34
complete UI 152
complex software systems 243
component 245, 249, 251, 252, 253, 254, 256, 258, 259, 260
composition analysis 256
composition correctness 254
composition level specifications 252
compositions 245
computational tree logic (CTL) 258
configurable connectors 189
configurable EPC 187
configurable functions 188
configurable reference model 188
configurable reference modeling language 180, 185, 186
configurable reference process model 182
configuration 181
configuration guidelines 189
configuration requirements 189
configuration time 185
configuration using configurable EPCs 190
configured connectors 192
conformance testing 195
connector 245, 250, 252, 253, 256, 259, 260
constraints for the configuration of connectors 189
continuous evolution 2, 5, 9, 12
co-occurrence constraints 28
cost-benefit 154, 156
coverability tree 255

D
data warehouses 42
dEACON method 220, 231
dependability attributes using SAM 257
deployment of system theories 96
derivation rules for configured functions 192
design-by-committee syndrome 175
designer-encapsulated factors 167
designing software architectures 250
design principles 185
design time 185
discrete evolution 9, 10
dynamic semantics of PrT Nets 247

E
element (component/connector) correctness 254
element instances 253
element level analysis 255
element level specifications 251
to-end latency 258
enhanced browser capabilities 161
enterprise resource planning (ERP) 181
enterprise systems (ES) 181
entity-relationship modeling (ERM) 196
entity-relationship-time (ERT) 33
evaluation windows 37
event-driven process chains (EPCs) 183

F
fault-tolerance 258
feature creep 173
firing rate 106
first order temporal logic 254, 256, 259, 262
formal analysis techniques 254
formalised organisational guidelines 174
formal methods xii, 243, 250, 258, 259, 260
formal software architecture analysis 254
formal verification 259

G
general inspection 117, 119, 121, 124
graph reduction 192

graph repository 44, 45, 55
graph transformations mechanism 44
grounded theory (GT) 166
group development 15, 16, 17, 18, 20, 21, 22, 24

H
heuristics 62, 63, 169, 251, 252, 253, 260
Hevner’s fifth guideline 204
high-level Petri net 259, 260
hiring rate 106
human computer interaction (HCI) 145, 146
hypermedia design 175

I
independent business 203
information system development approaches (ISDA) 62
information systems development (ISD) 58, 59
information systems (IS) 58, 202
instant messaging (IM) 59
institutions under obligation (IUO) 117
interaction overview diagrams 140
International Federation for Information Processing (IFIP) 91
intrinsic design context 171
IS 2002 91, 93, 94, 95
ISD tangible 59

K
kernel theories 204

L
Light UML 134
load balancing 42, 43, 54, 56
lookacross 29, 30
low-level Petri net 254, 259

M
management technology 98
Massachusetts Institute of Technology (MIT) 99
“Method-in-Action” model 166
micro-level research 65
Microsoft IIS (Internet Information Services) 131
mining configurable reference models 194
model-based interface development tools 145
model checking 254, 255, 261
model checking technique 255
MSIS 2000 91, 93, 94

P
participation 28, 29, 30, 34, 36, 58, 62, 63, 64, 65
participation constraints 28
Petri net 245, 249, 251, 252, 254, 257, 258, 259, 260
potential configurable reference model 188
potential reference model 184
pragmatic satisficing 173, 175
predicates 249
predicate symbols 249
predicate transition net 246, 258, 260, 262
pre-fabricated “productised” solutions 173
process-aware information systems 181
process discovery 195
process mining 194
process mining techniques 195
process-orientation 181
projection constraints 28, 30
project success 16, 17, 22
property specification 245, 246, 251, 252, 253, 254, 256, 257, 259, 260
propositional temporal logic 254
PrT net 246, 248, 249, 250, 251, 253, 255, 257, 258
PrT Net 246
punctuated equilibrium (PE) 15, 16

R
reachability tree 255, 256, 258
reachability tree technique 255, 256, 258
reference model lifecycle 185
reference models 181, 182, 194
refinement analysis 257
refinement correctness 254
relational mapping 147, 148, 149
relationships, attributes, keys and entities (RAKE) 32
relationship sets 148
relationship types 198
Reliability 258
reporting data mart 43, 48, 49
reputation and trust management system (RTMS) 202
reputation mechanisms 205
reuse models 156
rigid function 249
rigid variables 249
rites of passage 15, 18, 19, 22
RTMS artifact 204
run time 185

S
SAM 245, 246, 249, 250, 252, 253, 254, 257, 259, 260
SAM architecture properties 249
SAM software architecture 245
Schedulability 258
SEACON method 219, 222, 229, 230, 231, 238, 239
secure location model 219, 220, 224, 232
security 258
security risk register 223, 226, 227, 228, 232, 237
security risks 223, 226
semantic temporal EER 32
service oriented architecture 93
SHIPIT secure network architecture 237
simple EER schema 151
social identity 15, 18, 19, 20, 21
software architecture 243, 244, 246, 250, 251, 252, 254, 257, 258, 260
software architecture model (SAM) 245, 251
software architecture specification 245, 250, 252, 254, 260
software component 260
software development (SD) 16
software engineering 68, 69, 85, 91, 178
software engineering education 68, 85
software marketing management (SMM) 110
software reuse 154, 155, 156, 160
Sparx Systems Enterprise Architect CASE tool 136
spatio-temporal data 1, 2, 3, 4, 12, 13
spatio-temporal databases (STDB) 1
specification 252, 253
state functions 249
state-of-the-art practices 182
states 249
state variables 249
structures of software architectures 245
Syntax and Static Semantics of PrT Nets 246
system dynamics 99, 100, 101, 103, 104
system engineering activities 99
system engineering concepts 96
system properties in temporal logic 250
system simulation analysis and design 100
system theory 97

teaching systems analysis and design 69, 85, 87
temporal EER (TEER) 32
temporal entity-relationship (TER) 33
temporal event-entity relationship model (TEERM) 34
temporal formulas 250
temporal identity 15, 16, 18, 19, 20, 21
temporal logic 245, 249, 250, 251, 254, 255, 256, 257, 258, 259, 260
temporal logic formula 245, 249, 250, 258
temporal objects 1, 2, 3, 4, 5, 6, 10, 11
temporal success 15, 16, 19, 20, 22, 24
TERC+ 34, 37
theorem proving 256
theoretical saturation 163, 165
timing diagrams 42, 43, 46, 47, 48, 50, 51, 52, 53, 54, 55

transaction time 2, 6, 7
transitions 249

U
UI mapping 147, 148, 149
UML 2.0 55, 57, 115, 116, 117, 131, 132, 133, 135, 136, 143
UML 2.x 46, 134, 135, 136, 140, 141, 142, 143
UML complexity 136, 137
UML(VR) 55, 57
unified modeling language (UML) 2, 25, 43, 115, 134
use cases 42, 47, 49, 74, 116, 120
user interface (UI) 145, 146
user participation approach (UPA) 58, 59, 62

V
valid time 2, 6, 7
values 249
variation points 186
verification 244, 254, 256, 258, 259, 261
verification technique 256
vertical consistency 43, 44, 55
visibility 29, 30, 143
