GUEST EDITORIAL PREFACE

Special Issue on Impact of Information Communication Technologies on Our Social Life

Gulsun Eby, Anadolu University College of Open Education, Eskisehir, Turkey
T. Volkan Yuzer, Anadolu University College of Open Education, Eskisehir, Turkey

Information Communication Technologies create a digital revolution, and have become essential to the operation of online societies. The more digitalized culture has become, the more social barriers have broken down. Information Communication Technologies can able to establish global and local (glocal) arena to transfer information and communication seamlessly. Therefore, these technologies strengthen democracy by increasing social and intellectual participation. In this case, this Special issue focuses on the important pitfalls and challenges for technological products, procedures and practices.

The authors have contributed to this Issue cultural significance of Information Communication Technologies through interdisciplinary studies in social sciences, humanities and science. Also, these authors provides resources for making critical decisions and performing ethically, efficiently and effectively in a complex and fast-changing world influenced extremely by Information Communication Technologies. In short, this issue examines how Information Communication Technologies affect online society, and they progress through societal processes.
