Acknowledgment

Editing a book represents considerable work. However, more than anything, it embodies team work. The authors, editorial team, editorial advisory board, and external reviewers are all part of a multidisciplinary team. The work of editing a handbook on product design and development is in itself a product development process. It involves keeping track of contacts of authors and their contributions, exchanging information and ideas, managing the review process, feeding back review to the authors, managing conflicting perspectives, and integrating contents into a reasonable structure, with the ultimate goal of developing a product that adds value to the readers' body of knowledge.

As team leaders we, the editors, have to thank our team members for the effort involved in this initiative. This handbook is primarily supported by the team of professionals from IGI Global, most notably Ms. Jan Travers and Ms. Christine Bufton for the opportunity and constant support in editing the book, timely suggestions, prompt feedback and friendly reminders about deadlines.

To the Members of the Editorial Board, our gratitude for sharing with us their knowledge and experience in the support of the decision-making processes inherent to the project, for assisting in the review process, and for their help in shaping the handbook: António Augusto Fernandes (FEUP, Portugal), António M. Cunha (University of Minho, Portugal), Carlos Aguiar (FEUP, Portugal), Cees de Bont (TUDeflt, Netherlands), Chris Magee (MIT, USA), Dan Whitney (MIT, USA), David Wallace (MIT, USA), José Rui Marcelino (AlmaDesign, Portugal), Manuel de Freitas (IST, Portugal), Michael Tovey (Coventry University, UK), Paulo Ferrão (IST, Portugal), and Raul Cunca (FBAUL, Portugal).

As the contributions were extremely broad in scope, aside from reviews performed by the Members of the Editorial Board, we had to call on external experts to serve as reviewers for some of the chapters. To them, our sincere thanks for this entirely voluntary work: António Gonçalves Coelho (FCT-UNL, Portugal), António Pontes (University of Minho, Portugal), Carlos Tavares Ribeiro (Academia Militar, Portugal), Deana McDonagh (Univ. Illinois at Urbana-Champaign, USA), Jeremy Gregory (MIT, USA), Joaquim Mendes (FEUP, Portugal), Joshua Summers (Clemson Univ., USA), Kin Wai Michael Siu (Hong Kong Polytechnic University, Hong Kong), Lia Patrício (FEUP, Portugal), Mirja Kälviäinen (North Karelia University of Applied Sciences, Finland), Paulo Peças (IST, Portugal), Renato Bispo (ESAD-IPLei, Portugal).

We acknowledge all the authors, without whom there would be no Handbook in the first place! Some of the authors played a double role also as blind-reviewers for some of the chapters written by others. The process of editing a handbook of this kind brings the community together from academia to industry, making it an enriching experience for all.

We also have to acknowledge all the authors who submitted chapter proposals that were not included in the final version of the handbook. Many contributions were not considered, despite their merit, either because they were out of the scope for this handbook, time limitations, or other constraints.

A special word to our home institutions, the Instituto Superior Técnico of the Technical University of Lisbon and the Polytechnic Institute of Cávado and Ave, for providing the infrastructure, material resources, and logistics required for our work.

Thank you!

The Editors,
Arlindo Silva
Ricardo Simões
