

# Index

## A

adaptive algorithm 190  
 adaptive arrays 354  
 adaptive beamformer, overview 35  
 adaptive beamforming assisted receiver 60–81  
 adaptive beamforming theory 188  
 adaptive modulation and coding (AMC) 286, 290  
 adaptive MREC 26  
 adaptive MSER beamforming 68  
 adaptive principal component extraction algorithm (APEX) 169  
 ad hoc networks 500–512  
 ad hoc networks, and security 402  
 advanced space-time block codes 107–129  
 Alamouti code 272  
 algorithm implementation 164  
 algorithm properties 166  
 amount of fading 22  
 antenna arrays 218  
 antenna configuration 185  
 antennas 485  
 antennas, fixed-beam 404  
 antennas, multi-beam 398–424  
 antennas, smart 352–373, 449–473  
 antenna spacing 226  
 array gain 11, 22  
 arrays, adaptive 354  
 arrays, phased 354  
 array steering vector (ASV) 34  
 automatic radio frequency identification (RFID), and smart antennas 449–473  
 average error probability 24  
 average far-field beampattern 98  
 azimuth angle spread models 7

## B

barcodes 451  
 baseband receiver 487  
 baseband transmitter 486  
 basic detection 117  
 beamformer, fully spatial 517

beamformer, space-frequency 516  
 beamformer, space-time 515  
 beamformer, wideband spatial 519  
 beamformer design 265  
 beamforming, adaptive 537  
 beamforming, blind adaptive 539  
 beamforming, sector 536  
 beamforming, trained adaptive 537  
 beamforming-decoding interface 87  
 beamforming algorithm 519  
 beamforming architectures 185  
 beamforming matrix, feedback 243  
 beamforming via sample matrix inversion 84  
 beampattern 96  
 beampattern properties 98  
 Bell Laboratories layered space-time system (BLAST) 226  
 blind channel estimation 156–182  
 blind channel estimation, proposed criterion 163  
 blind channel estimation techniques 162  
 blind maximum likelihood receiver 162

## C

CDMA system 355  
 channel indeterminacies, solution 168  
 channel state information (CSI) 156, 375  
 channel station information 242  
 cochannel interference (CCI) 82–93  
 Code Division Multiple Access (CDMA) 352–373  
 code division multiple access (CDMA) systems 270  
 collaborative beamforming 94–106  
 common STBCs 159  
 compact array antenna 532–544  
 compact array antenna, DoA 201–216  
 compact wireless ad hoc network testbed 503  
 conventional receivers 9  
 conventional robust adaptive array beamformers 37  
 correlation matching 169  
 cumulative distribution function (CDF) 102

## Index

### D

data deletion process 428  
direction of arrival (DoA) estimation, compact array antenna 201–216  
diversity gain 14, 17  
diversity order 14

### E

eigen-decomposition (EVD) 36  
eigencombining 1–32  
equivalent weight vector (EWV) method 208  
error correction codes (ECC) 130  
ESPAR antenna 504  
Espar antenna 201, 203, 532  
Espar antenna, design of 533  
Espar antenna beam pattern 188  
Espar antennas 188

### F

fading channel model 5  
far-field beampattern of random arrays, distribution 99  
fast beamforming of compact array antenna 183–200  
field programmable gate array (FPGA) 482  
frame error rates (FERs) 90  
frequency division duplex 240

### G

generalized eigenvalue problem (GEV) 163

### H

higher-order statistics (HOS) approaches 169  
hybrid smart antenna systems 360

### I

identifiability analysis 166  
IEEE802.15.4/ZigBee 505  
intersymbol interference (ISI) channel 130

### J

joint beamforming 264–285

### K

Karhunen-Loeve transform (KLT) 2

### L

least mean square (LMS) algorithm 34  
least squares 117  
linearly constrained minimum variance (LCMV) beamformer 33  
linearly constrained minimum variance array beamformers 37  
linear precoding 169

list detection 123  
list stack algorithm 123  
list stack with restricted branching 124  
low complexity near optimal detection 117

### M

Massachusetts Institute of Technology (MIT) 450  
maximal-ratio combining (MRC) 1, 2  
maximal-ratio eigencombining (MREC) 1, 20  
maximum-average-SNR (statistical) beamforming (BF) 11  
maximum cross-correlation coefficient (MCCC) criterion 183  
maximum likelihood sequence estimation (MLSE) decoding 144  
MC coded ZF-DFE performance analysis 144  
media access protocols, direct 500  
MIMO beamforming 240–263  
MIMO channel capacity 289  
MIMO channel model 287  
MIMO transmit and receive beamforming 241  
minimum mean square error (MMSE) 118  
minimum mean squared error (MMSE) decoding 144  
minimum mean square error (MMSE) design 60  
minimum mean square error minimum mean square error (MMSE) beamforming design 64  
minimum symbol error rate (MSER) design 60  
minimum variance distortionless response (MVDR) beamformer 83  
minor component analysis (MCA) 39  
modulated codes (MC) 130  
Monte Carlo simulations 308  
MRC numerical complexity 19  
MRC performance 18  
MSER beamforming design 64  
multi-antenna systems 217–239  
multi-beam antennas 398–424  
multiple-input-multiple-output (MIMO) 226, 375  
multiple-input-multiple-output (MIMO) systems 107, 156  
multiple-input-multiple-output antenna system (MIMO) 240–263  
multiple antennas 217  
multiple input-multiple output (MIMO), and relaxation detection 308–327  
multiple input-multiple output (MIMO) 474–499  
multiple input-multiple output (MIMO), capacity 477  
multiple input-multiple output (MIMO), system 476  
multiple input-multiple output (MIMO), testbed 478  
multiple input-multiple output (MIMO) channels 264–285  
multiplexing gain 226  
mutual admittance matrix calculation 187  
mutual coupling 522

mutual coupling, array antennas 223

## N

new high rate STBC 110  
 non-preamble-based SMI beamforming 85, 86  
 non-redundant precoding 172  
 null forming ability 193  
 numerical complexity comparison 26  
 numerical experiments 48

## O

omniradiation 534  
 optimal MC design 147  
 orthogonal space-time block code (O-STBC) 110, 159  
 outage probability 24

## P

parasitic array antennas 184  
 phased arrays 354  
 power azimuth spectrum 7  
 power control scheme 380  
 power control scheme, 1-bit 381  
 power control scheme, multi-bit 383  
 Power Pattern Cross Correlation (PPCC) 202  
 preamble-based SMI beamforming 86  
 previous blind decoding approaches 161  
 principal component analysis (PCA) 39

## Q

QRD-stack 120  
 quadrature amplitude modulation (QAM) schemes 60  
 quasi-orthogonal space-time block codes (QSTBCs) 160

## R

radio systems 513  
 radio waves 426  
 random array theory 94–106  
 random azimuth spread 28  
 rate-four code for four transmit antennas 110  
 rate-reduction technique 170  
 rate-two code for four transmit antennas 111  
 rate-two code for three transmit antennas 112  
 rayleigh fading system 73  
 RD-ESPRIT 206  
 RD-ESPRIT algorithm 209  
 RD-MUSIC 206  
 RD-MUSIC algorithm 208  
 realistic BF 18  
 received signal model 4  
 relaxation detector 316  
 RFID readers 451  
 robust adaptive beamforming 33–59

robust beamformer, new uncertainty constraints 44  
 robust beamforming, based on max-min optimization 39  
 robust capon beamformer (RCB) 40

## S

sample covariance matrix (SCM) 83  
 sample matrix inversion (SMI) beamforming, employment of 82–93  
 scalar quantization 244  
 scanned beam antenna systems 453  
 scheduling, fair 378  
 scheduling, greedy 377  
 scheduling schemes, and channel dynamics 377  
 SESAM 332  
 sidelobes 102  
 signal-to-interference-plus-noise ratio (SINR) 39  
 signal-to-noise ratio (SNR) 218  
 signal and channel models 4  
 signal model 35, 108  
 signal model and assumptions 191  
 signal to noise ratio (SNR) 156  
 simultaneous perturbation stochastic approximation (SPSA) theory 183  
 single-input single-output (SISO) concept 10  
 smart antenna, and key generation system 425–448  
 smart antennas 183, 514, 449–473  
 smart antennas, and pilot availability 356  
 smart antennas, channel models for 357  
 smart antennas, for code division 352–373  
 smart antennas, hybrid 360  
 smart antennas, uplink vs. downlink 356  
 smart antennas, vs. diversity 355  
 smarter antenna arrays 26  
 SNR probability density function 23  
 space-division multiple access (SDMA) 94  
 space-time block coding (STBC) 107, 156  
 space-time block coding data model 157  
 space-time coding 270  
 space-time MC, information rates 136  
 space-time MC coded MIMO systems, capacity 136  
 space-time modulated codes for MIMO channels 130–155  
 space division multiple access (SDMA) 264  
 spatial multiplexing (SM) 109  
 standard LMS beamforming 193  
 stationary system 70  
 statistical beamforming (BF) 2  
 statistical beamforming (BF) procedure 11  
 STBC data model 158  
 STBCs, new techniques 170  
 Stockman, H. 450  
 structured codebook 248  
 subspace-based techniques 162

## **Index**

sum rate maximization 333  
SWAMP 501  
SWAMP OC-mode 506  
switched beam antenna system 354  
switched beam array antenna 454  
system model 61, 83, 96

### **T**

tapped-delay lines (TDLs) 516  
TDMA system 355  
thermal noise 225  
time division duplex 240  
trace-orthogonal space-time block codes (TOSTBCs)  
161  
transmit beamforming 240, 265  
trellis coded modulation (TCM) 144

### **U**

uncertainty of steering vector 42  
uniformly distributed random array 98  
University of Queensland 483  
unstructured codebook 247

### **V**

vector quantization 246  
vector space illustration 85

### **W**

wideband smart antenna 513–531  
wireless communications 217  
wireless communication systems 474

### **Z**

zero-forcing decision feedback equalizer (ZF-DFE)  
decoding 144
