

Acknowledgment

Special thanks go to the anonymous reviewers who provided critical and/or constructive review comments on the first draft of this monograph. In particular, I acknowledge an expert reviewer in the field of quantum gravity who made authoritative and decisive judgment on the central theme of this book.

Special thanks go to Development Editor Joel Gamon at IGI Global for his effective and timely double-blind review and decision process.

I acknowledge all my co-authors of published or accepted article(s) in more than 20 years for their contributions in different aspects related to the chapters of this monograph. In particular, I acknowledge Professor Anand K. Pandurangi (MD), Professor Karl E. Peace, Professor Yan-Qing Zhang, Professor Zhongming Zhao, Professor Su-Shing Chen, Professor Yong Shi, Dr. Stefan Jaeger, Ms. Jane H. Zhang, Mr. Hongzhao Zang, Professor Paul P. Wang, and Professor Justin Zhan, who have been my co-authors of recent journal or conference article(s).

I acknowledge all anonymous reviewers who have been critical and/or constructive on accepted or unaccepted submissions related to this monograph in more than 20 years. Special thanks go to one authoritative anonymous reviewer who was antagonistic toward this line of research but unwilling to reveal his name for a public debate. The antagonistic attitude provided a surviving environment for this work to grow stronger and hopefully healthier.

I acknowledge all journal Editors who handled my submissions and provided review comments in the last 20+ years. In particular, I acknowledge Professor Roger Jean, Professor Lawrence O. Hall, Professor Toshiyo Tamura, Professor Yong Shi, Professor Henri Prade, Professor Hao Ying, Professor Anew P. Sage, Professor Andrew B. Whinston, Professor Petre Dini, Professor Ivan Stojmenovic, Professor Tao Yang, Professor Robert Kozma, Professor Guo-Zheng Li, Professor Mingyu You, Professor Dan Xi, Professor Xiaohua (Tony) Hu, Professor Paul P. Wang, and Professor Feiyue Wang for their positive review decisions on my related submissions. The accepted publications laid the groundwork for this monograph.

I acknowledge my former students in the College of Information Technology, Georgia Southern University, who took the computer science course CSCI 5436/5436G – Web Programming and Design in the summer of 2007. They helped me in the design and development of a software prototype for the illustrations in Chapter 10. Special thanks go to Mr. Wisley Howard, *2007 Student of the Year in Computer Science*, for his remarkable contribution to the coding and installation of the prototype.

I acknowledge my employer Georgia Southern University for my tenure and professorship that enabled me to conduct related research work and to write this monograph in addition to regular teaching. If one day YinYang bipolar relativity is accepted by the world scientific community, it should be alternatively called *A Georgia Southern University Interpretation of Nature, Agents, and Causality*.

I acknowledge all authors who have cited my related publications in their articles for their inspiration. In particular, I acknowledge Professor Lotfi A. Zadeh, founder of fuzzy set theory, for being the first academic authority to recognize (YinYang) bipolar fuzzy sets in *Scholarpedia*.

I acknowledge Professor Walter J. Freeman III for his legendary inspiration. I got to know Walter at the *Panel Discussion on Brain-Like Computer Architecture* at *JCIS-2003*, Research Triangle Park, NC, where he served as a distinguished panelist and I was in the audience. On the argument between a hierarchical brain model presented by a keynote speaker and a semiautonomous multiagent society brain model with coordinated autonomy suggested by someone unknown in the audience, Walter gave his authoritative word: “*I agree with the audience.*” Walter’s comment inspired many to join the fruitful debate in the packed meeting room. Four years later, the unknown person in the audience resurfaced and dedicated a paper to Walter at *Walter J. Freeman (80 Year Birthday) Workshop on Nonlinear Brain Dynamics*, Salt Lake City, Utah (July 2007). The paper was entitled “YinYang bipolar universal modus ponens (BUMP) – a fundamental law of non-linear brain dynamics for emotional intelligence and mental health.” The author happened to be myself. After my talk on the workshop, Walter gave me encouraging comment and suggested the possibility of developing mathematical models for the classical concepts of YinYang-5-agents and Chinese Meridian System in Traditional Chinese Medicine (TCM). Now, three years later, YinYang-N-element cellular networks have been developed that form a basis for Chapters 8 and 9 of this book.

I acknowledge Professor Yang Shi for his discovery of the Yin Yang 1 (YY1) ubiquitous genetic agent. YY1 has been a major inspiration to my work.

I acknowledge Professor Yan-Qing Zhang for his leadership role in YinYang scientific research and long time support to my work. Yan-Qing pioneered original works in YinYang scientific research and successfully organized the first Workshop on YinYang Computation for Brain, Behavior and Machine Learning, Atlanta, GA, Aug. 2005. It was a well-organized delightful event. Its fruitful discussions will continue to show long lasting scientific impact on a wide spectrum of research topics for many years to come.

I acknowledge Professor Lei Xu, founder of Bayesian YinYang machinery for his inspiration. In particular, Dr. Xu made encouraging comment on my YinYang Bipolar Universal Modus Ponens (BUMP) at the aforementioned workshop back in 2005. Specifically, Dr. Xu asserted that BUMP is a generalization of MP to a different domain.

I acknowledge Professor Tingsen Xu, Taiji Grand Master, who was a speaker at the aforementioned workshop. In addition to his inspiring talk and illustration, our conversation has become my long lasting memory. Five years later, I still remember vividly an elegant point made by Master Xu on YinYang theory at the dinner table: Yin leads Yang because Yin can reproduce Yang. This key point is reflected in this monograph.

I acknowledge my colleague Professor Robert P. Cook for his advice on YinYang and bipolarity. A few years ago, a well established Chinese American friend strongly urged me to drop the word “YinYang” from “YinYang Bipolarity” “to avoid hurting the others’ feelings”. On this matter, I consulted with Robert for his opinion from a Westerner’s perspective. Robert unequivocally stated: “YinYang is to your advantage; bipolarity is not.”

I acknowledge Professor Xing Fang, Professor Don Fausett, Professor Hassan Kazemian, and Professor Huei Lee for their long time support to my related research works.

Special thanks go to Professor David (Yang) Gao for his encouraging comments on my recent works.

Deep appreciation is due to my friend and colleague Professor Karl E. Peace. As a distinguished scientist and educator, accomplished entrepreneur, and renowned philanthropist, Karl has been a major inspiration to my research. In particular, Karl generously proofread the last draft of my manuscript, corrected typographical errors, and suggested enhancements. I am honored and grateful for his innovative, impartial, and insightful foreword.

And last but not least, I acknowledge my wife and children for their love and unfailing support during the years and months it took to bring this monograph to the world.

Wen-Ran Zhang
