

Acknowledgment

Our vision for this book was to gather information about methods, techniques, and applications from the domain of semantic work environments, to share this information within the community, and to distribute this information across projects and organizational boundaries.

During the course of realizing this vision, we received much support from people who spent a huge amount of effort on the creation and review process of the book. We would like to express our appreciation to all the projects and people involved in researching semantic work environments. We are especially grateful to the authors who provided us with deep insights into their projects and related results.

Furthermore, we are also indebted to the publishing team at IGI Global for their continuing support throughout the whole publication process. Deep appreciation and gratitude is due to Jessica Thompson, Assistant Managing Development Editor at IGI Global, who supported us and kept the project on schedule.

Most of the authors of chapters included in this book also served as reviewers for chapters written by other authors. Thanks go to all those who provided constructive and comprehensive reviews.

Last but not least, thanks also go to the technical staff at Fraunhofer IESE and especially to Sonnhild Namingha for proofreading parts of the book.

The Editors,

*Jörg Rech, Eric Ras, Björn Decker
