

Acknowledgment

This book was written when one of the authors, Professor Eng Chew, held the UTS-Gartner Chair of Business and IT Strategy (2005–2008) teaching IT strategy and conducting IT management research in the Faculty of Information Technology, University of Technology Sydney (UTS). Professor Chew expresses his deep gratitude to Gartner's sponsorship and professional support during this period, which has allowed him to work with many leading Gartner research analysts and Gartner clients. He also thanks Gartner for permission to use Gartner material on Gartner Enterprise Architecture in the book.

Professor Chew also thanks UTS for the employment opportunity to transition from industry to academia allowing him to bring his experience to the classroom. Thanks also go to his graduate students (professionals from industry) in IT strategy over the last three years, who have indirectly contributed to the book through their many work-related insightful questions during class. It has been a most stimulating and rewarding experience.

Professor Chew is grateful to many practicing CIOs for their helpful discussions, many of whom have also come to give guest lectures to his class at UTS. In particular, he wants to thank Mr. Joe Locandro, Director, Group Information Technology, CLP Group, Hong Kong, and CLP Group for permission to use CLP IT strategy as a case example for the book. In particular, heartfelt appreciation is due to Mr. Locandro for the numerous hours of interviews and discussions; Chapter 12 owes a lot to Mr. Locandro's work. Sincere thanks also go to Mr. Michael Leung, Senior Vice President and CIO, China Construction Bank (Asia), Hong Kong, for agreeing to author the Foreword and for sharing his inner thoughts on IT management and leadership practices.

Thanks also are due to Norwegian School of Management, Oslo, for hosting Professor Chew's visit in 2007 to work on the book with Professor Petter Gottschalk. UTS research seed grant which supported this project is also gratefully acknowledged.

Last but not least, Professor Chew expresses his deepest thanks to his wife Jan, son Eugene, and daughter Elaine for their encouragement and understanding, particularly Jan for her patience and constant support without which the book would not have been possible.

Eng K. Chew
Professor of Business & IT Strategy
Faculty of Engineering and Information Technology
University of Technology Sydney
August 2008
