

Acknowledgments

Editing a book is a hard, but compensating and enriching, task, as it involves an array of different activities, like contacts with authors and reviewers; exchanges of ideas and experiences; process management; organization and integration of contents; and many others, with the permanent objective of creating a book that meets public expectations. And this task cannot be accomplished without great help and support from many sources. The authors would like to acknowledge the help, support and confidence of all who made this creation possible.

First of all, this book would not have been possible without the ongoing professional support of the team of professionals of Idea Group Inc., whose contributions throughout the process of making this book available all over the world was invaluable. We are most grateful to Mehdi Khosrow-Pour, senior acquisitions editor, and Jan Travers, managing director, for the opportunity. A special word of gratitude is due to Kristin Roth, development editor, for her guidance and friendly words of advice, encouragement and prompt help. Special thanks go also to Sara Reed and all the staff at Idea Group Inc., whose contributions throughout the process of making this book available all over the world was invaluable.

We are grateful to all authors—who simultaneously served as referees for chapters written by other authors—for their insights, valuable contributions, prompt collaboration and constructive comments. The communication and exchange of views within this truly global group of recognized individuals from the scientific domain and industry was an enriching and exciting experience for us, the editors. We wish to thank all the authors for their insights and excellent contributions, which made this book into the book we wanted.

We also are grateful to all who acceded to contribute to this book, some of them with high-quality chapter proposals, but unfortunately, due to size limitations, could not see their work published.

The authors would like to acknowledge the support of the Network of Excellence I*PROMS—*Innovative Production Machines and Systems* (www.iproms.org/), an EU FP6 project, N° NMP2-CT-2004-500273, whose partner is University of Minho.

A special thanks goes to our institutions, the University of Minho and the Polytechnic Institute of Cávado and Ave, in Portugal, for providing the material resources and all necessary logistics.

Thank you.
