

Acknowledgment

First, we wish to express our sincere gratitude to Dr. Mehdi Khosrow-Pour, senior academics editor, and Jan Travers, managing director for the opportunity they give us, and whose enthusiasm motivated our accepting their invitation for taking on this project.

Special thanks also to all the staff at IGI Global, whose contribution throughout the whole process from inception of the initial idea to final publication have been invaluable. In particular, to Kristin Roth, development editor and Meg Stocking, assistant development editor for their helpful advise on how to solve some problems and for their guidance and professional support. We thank our first assigned assistant development editor, Lynley Lapp, as well.

We deeply appreciate the support of Laura Rivero, Viviana Ferraggine and Jorge Doorn. They have provided unconditional assistance, and they have also offered their inestimable experience as editors.

Most of the authors of the chapters included in this book also served as referees for articles written by other authors, without whose support the project could not have been satisfactorily completed. Special thanks go to all those who provided constructive and comprehensive reviews.

External reviewers who provided comprehensive, critical, and constructive comments were Paulo Gottgtroroy and Stephen MacDonell of Knowledge Engineering and Discovery Research Institute, School of Computer and Information Sciences, Auckland University of Technology.

Once again, as editors, we would like to thank the contributor's authors for their excellent papers and patience with the process. Making this kind of compilation is a huge responsibility and it has brought about people with varied experience and analysis.

Finally, we want to thank our families for their love and support throughout this project.
