

Acknowledgments

I wish to recognize the contributions of the JOEUC reviewers and associate editors to *Advanced Topics in End User Computing: Volume 3*. I thank them for diligently reviewing and critiquing the manuscripts originally submitted to JOEUC, sometimes several versions of the same manuscript. My sincere thanks also to the authors for being highly responsive to the review team's comments and promptly meeting the deadlines imposed on them. They have made outstanding contributions to this publication.

I express my special thanks to Hettie Houghton at the Information and Decision Sciences Department, University of Texas at El Paso, who was instrumental in keeping this project on track. Her effort and dedication to the project are truly appreciated. I also thank Jan Travers and Amanda Appicello at Idea Group Inc. for their help toward this project.
