

Acknowledgments

The editors would like to acknowledge the help and support provided by many colleagues during the call for chapters, the peer-review process, and the final compilation of *Collaborative Geographic Information Systems*. Moreover, the dedication and advice provided by the Idea Group Inc. staff throughout the entire process from initial proposal approval to final publication played a crucial role in the successful production of this book.

We are grateful to all the reviewers from our pool of chapter authors and external researchers who kindly agreed to review the chapters. The chapters were subjected to at least two double-blind peer reviews to improve their accuracy and completeness. The inclusion of chapter authors in the review process contributed to the overall strength and quality of the book. The following external researchers provided valuable assistance in the review process:

Dr. Keiron Bailey (University of Arizona, USA)

Dr. Rosaline Canessa (University of Victoria, Canada)

Dr. Rob Feick (University of Waterloo, Canada)

Dr. Peter A. Kwaku Kyem (Central Connecticut State University, USA)

Dr. Roger White (Memorial University of New Foundland, Canada)

We wish to acknowledge the professional and friendly guidance given by the management and development teams at Idea Group Inc. during all stages of the process. *Dr. Mehdi Khosrow-Pour* and *Ms. Renee Davies* received our proposal with great enthusiasm, *Ms. Jan Travers* patiently explained the contrac-

tual and administrative details, *Ms. Kristin Roth* and *Ms. Michele Rossi* handled the operational planning for the project and their e-mail reminders about required documents and upcoming deadlines kept us on track, while *Ms. Amanda Phillips* collaborated closely with us in the later stages to prepare the marketing and promotional materials.

Finally, the chapter authors deserve our special thanks for the long hours they have invested in assembling their initial chapter proposal, writing the full chapter, and addressing the feedback from the chapter peer-review process. The chapters are all excellent contributions, and it was indeed our pleasure to work with these authors to collectively bring this publication into the hands of interested readers everywhere. We hope the research articulated in this book will be valuable to transdisciplinary and specialist readers as they continue to explore the science, technology, and application frontiers of *Collaborative Geographic Information Systems*.
