

Acknowledgment

Producing a book of cases is an exciting but complex endeavor. I would like to thank the staff at IGI Global, especially Mehdi Khosrow-Pour, Kristin Klinger, Jan Travers, Jennifer Neidig, Kristin Roth, Andrew Bundy, and particularly Tyler Heath who worked with me from start to finish. Their assistance and expertise was invaluable to me throughout the production process—from the initial prospectus to the edited book. As always, working with the reliable and high-energy team at IGI Global was a thoroughly enjoyable experience.

Producing a book of cases involves the efforts of many other individuals as well. I would especially like to thank editorial advisory board members and all those who reviewed the cases. Without such reviewers' comprehensive, critical, and constructive comments and suggestions, this book would not have been possible. Special thanks to Mark Goniwiecha, professor of library science at the University of Guam, who wrote the Foreword to the book. His extensive knowledge and experience, not only in library/information literacy but also in the use of technology for diverse learners, made his contribution especially valuable.

More than anything else, a book of cases represents the synthesis of its many contributions. I would like to express my sincere appreciation to all the case contributors who wrote, revised, clarified, and responded to my many inquiries, especially during the editing phase. Many of the case contributors were also the case reviewers. This book and its value are truly built upon these contributions, which come from countries as diverse as Australia, Guam, Island, Italy, Macao, and the United States. Most of the contributors would not identify themselves as technologists; rather, they are using new technologies, in both blended and online learning, to deliver or to reinforce the content in their areas of expertise. The case contributors have shared their real-life experiences—thus their own practices, applications, challenges, and discoveries—as they seek to improve university teaching and learning in the Internet Age of today.

In closing, I would like to thank my colleagues and my students at the University of Guam for their encouragement and their countless helpful suggestions during the development of this book. Finally, I want to acknowledge and thank Kazuko Onodera, a retired educator and my academic and lifelong mentor, who has never lost faith in my scholarly endeavors and personal aspirations.
