

Acknowledgment

Projects like these never happen in a complete vacuum. It takes the combination of great effort and dedication of many people to make it a success. Editing books can be a slow process, taking many twists and turns, but with a talented group of people working together, great things can happen. That being said, we would like to sincerely thank the contributing authors of this book, whose talent was the driving force that allowed this book to be possible in its current form. It has been an absolute pleasure working with such a gifted and dedicated group of individuals, driven by their passion for pushing educational boundaries through their research and experimentation in using various technologies and virtual worlds. Without your hard work and willingness to share your ideas, none of this would have been possible.

We would also like to express our deep appreciation to the members of the Editorial Advisory Board for their time helping to review the many chapters and documents. Thank you to all the additional reviewers who volunteered their time and energy towards making the book successful. And as always, we would like to thank the publishing team at IGI for their help, patience, and guidance throughout the process. We are very grateful to have been allowed the flexibility of including a diverse set of topics and ideas in our book.

Last but certainly not least, we would also like to also thank our families, friends, and colleagues for their support and patience throughout this project, as always. We are often considerably invested in our many projects, and can always count on your support as we continue to work towards many aspects at improving education, research, and the use of virtual worlds. Thank you to everyone who made this book possible!!
