

Acknowledgment

The editors wish to thank those who supported our work and who helped to write, review, and publish this book.

We would first like to thank our colleagues in the College of Business and Economics at United Arab Emirates University and in the School of Information Systems at Victoria University in our home city of Melbourne, Australia. Our colleagues have been generous with their ideas and helpful suggestions and forgiving of our lapses and shortcomings as we worked to bring this book into being.

Our authors' enthusiasm and seemingly inexhaustible good will are only exceeded by the quality of their work. Contributions by authors from Australia, China, Ireland, Jordan, New Zealand, Oman, the United Arab Emirates, the United Kingdom, and the United States, provide global perspectives. Contributors include practitioners and academics. Their work offers fresh perspectives from authors beginning their careers as well as contributions from well-known senior academics.

We are grateful to our indefatigable team of reviewers whose dedication and willingness to work to very tight deadlines and short turn-around horizons helped our authors to polish and articulate their work for our greater benefit. All chapters were double-blind reviewed before acceptance.

We are grateful to our editors at IGI Global for their confidence that this book would make a worthwhile contribution to thinking about curriculum development and preparation of students and new graduates for professional careers in information systems. Jan Travers and Kristin Roth provided unwavering encouragement, assistance, understanding, and a level of support available only from talented editors at an exemplary publishing house.

We dedicate our efforts to our wives, Silvana Lowry and Im Turner, whose cheeky wit, good humour, and unwavering support made it possible.

Glenn R. Lowry, United Arab Emirates University, Al Ain, UAE

Rodney L. Turner, Victoria University, Melbourne, Australia
