

Index

A

AbstractEntry 216
 additivity condition 127
 alphabetical ordering 212
 amplitude change function (ACF) 258
 application-software security 158
 Archimedean axiom 120
 aspect-oriented programming (AOP)
 117
 assessment process 101
 atomic 20
 attribute language 211
 average information content classifica-
 tion (AICC) 128

B

behavioral property 181
 best practice 99
 binary-code implementation package
 230
 business component (BC) 181, 201
 business component factory (BCF) 234
 business component system 201
 business object component architecture
 (BOCA) 182

business process reengineering (BPR)
 12
 business process-based methodology
 (BPBM) 178
 business rule 53
 business rules diagram (BRD) 56

C

capability description 211, 213
 capability dimension 104
 capability maturity model – integrated
 (CMMISM) 26
 capability maturity model for software
 (CMM) 48
 chronological ordering 212
 class definition entropy (CDE) 128
 class intersection 119
 class unification 119
 client-server 4
 clients 211
 code level 69
 cognitive processes 165
 cohesion 123
 commercial off-the-shelf (COTS) 235
 complexity of code 125
 component behavior 237
 component granularity 239

- component identifier 237
- component information 237
- component-based development (CBD) 230
- computer-aided software engineering (CASE) 1, 44
- computer-related security issues 158
- constraint satisfaction problems (CSP) 212
- context-aware parameters 238
- continuous representation process 31
- customer-supplier category 102
- cyclomatic complexity 125

D

- data intensive applications 197
- data modeling 85
- descriptive formal models 158
- digital filter design problem 259
- directory services 211
- discovery protocols 214
- distributed component 201
- domain 217

E

- e-development 42
- Electronic Industries Alliance Interim Standard (EIAIS) 27
- end-user needs 196
- engineering 30
- engineering process category 102
- enterprise distributed system 230
- entity classes 85
- entropy 126
- entropy-based metrics 117
- exact temporal order 146
- external iteration 6
- Extreme Programming (XP) 43

F

- filter sharpening technique 262
- finite impulse response (FIR) 258, 272
- formalist school 160
- fragmentation 145

- function-oriented part 180
- Functional and Object-Oriented Methodology (FOOM) 82
- functional modeling 85

G

- geographical information systems (GIS) 195
- global objects 66

H

- heterogeneous data sources 180
- hierarchical ordering 212
- highpass (HP) 273
- human resource quality 165

I

- ILOG 218
- information technology (IT) 13, 43, 97, 231
- information technology (IT) management 158
- information technology solutions evolution process 203
- integrated capability maturity model (CMMI) 203
- integrated product development capability maturity 27
- interaction diagram 144, 149
- interface definition language (IDL) 124
- internal iteration 6
- International Council on Systems Engineering 29
- interpolated finite impulse response (IFIR) 258, 272
- iterator pattern 5

J

- join protocols 214

K

- knowledge engineering 165
- KobrA method 234

L

lines of code (LOC) 121
lowpass filter (LP) 273

M

machine learning 165, 168
management category 102
mechanistic-engineering method 159
methodical methodology 45
middle-tier distributed object 181
model-view-controller (MVC) architecture 179
module structure 73
multipliers per output sample (MPS) 258

O

object-oriented (OO) 82
object-oriented (OO) modeling 231
object-oriented (OO) programming 2
object-oriented analysis and design (OOAD) 2
object-oriented applications 116
object-oriented development methods 118
object-oriented methodology 195
object-process diagram (OPD) 84
object-process methodology (OPM) 84
objective function 217
organization process category 102

P

Petri Net (PN) 12
Petri Nets with Clocks (PNwC) 11
pragmatist stream 160
predicate logic expression 217
prescriptive formal models 158
process definition (PD) 12
process dimension 103
process execution 101
process management 30, 101
process-oriented part 180
profile theory 166
project management 30

protocol 212
pseudo-code 92
pseudolanguage 3
purpose statement 103

Q

quantitative management 98

R

R-C interaction pattern 183
RAISE specification development process 63
RAISE specification language (RSL) 63
Rational Unified Process (RUP) 202, 233
realization level 68
recursive running sum (RRS) 258
regular expression searches 213
rendezvous precondition 16
requirement description 211
requirements baseline 70
requirements description 213
risk/reward approach 49
Run-Time Security Evaluation (RTSE) 160

S

search criteria 211
search language 211
separation of concerns 117
serial form 216
service discovery 211
service provider 213
service-based approach 230
service-based system architecture 230
ServiceID 215
ServiceItem 215
ServiceTemplate 215
soft systems 169
software crisis 3
software development methodolog 43
software engineering (SE) 26, 42, 198
software metrics 117, 121
software process improvement model 27

- specialization level 68
- state components 66
- stopband 261
- structural property 181
- support process category 102
- System Development Life Cycle (SDLC)
161
- systems engineering 26, 165
- Systems Engineering Capability Model
(SECM) 27

T

- technical systems 169
- transition conditions 16
- transition information 16
- transition restriction 16

U

- Unified Modeling Language (UML)
1, 233
- universal client accessibility 180
- use cases 53

W

- wide spectrum language 67
- workflow 13
- Workflow Management System (WMS)
